Chrysler Corp. suffered declines in car and truck sales and in market share in the first half.

The only real winner was the Plymouth Laser, which posted a 175.71 percent increase in sales.

The sporty Eagle Talon helped keep Eagle sales respectable, while the Premier continued to slump.

The only other car lines in the plus column were the Plymouth Acclaim, the Chrysler LeBaron A and the Dodge Spirit.

Sales of Chrysler's trucks — its bread-and-butter vehicles — were down 9.98 percent for the half. The total for Dodge models plus Plymouth and Chrysler minivans was down 7.31 percent, and Jeep sales dipped 18.28 percent.

Only three truck models showed an increase: Dodge Caravan, Dodge pickups and Jeep Wrangler.

Sales of the Plymouth Voyager, the Caravan's minivan counterpart, were off 3.83 percent.

— Kathy Jackson

Asian makes

While new-car and light-truck sales in the United States dropped 3.63 percent, Asian nameplates posted a 6.16 percent increase in the first six months of 1990.

Of the 13 Asian nameplates sold in the United States, seven increased sales: Mazda, Honda, Acura, Toyota, Daihatsu, Isuzu and Mitsubishi.

Nissan, Hyundai, Suzuki and Subaru all suffering double-digit percentage declines.

Lexus and Infiniti, which weren't selling cars a year ago, claimed 37,699 sales in the first half of 1990.

Japan's Big 3 — Toyota, Honda and Nissan — garnered 6.79 percent, 4.99 percent and 4.18 percent of the total car and truck market.

The best seller in the first half was Toyota with 492,907 cars and trucks.

The biggest percentage increase in sales volume went to Mitsubishi, with a 65.29 percent jump.

Isuzu and Daihatsu posted their increases on the strength of trucks. Cars sales declined for each. Suzuki, on the other hand, sold more cars this year, but its sport-utility falloff cut its overall total.

Nissan's 17.30 percent drop in car sales overshadowed a 7.28 percent jump in trucks. Overall, Nissan sales fell 11.46 percent.

Hyundai sales were down 28.91 percent, and Subaru dropped 29.46 percent.

— Kristine Stiven Breese

European makes

Three German importers and one British maker increased U.S. sales in the first half of 1990, while European imports as a group declined 4.52 percent.

The Europeans sold 242,491 cars and trucks in the first half of 1990. Their market share of 3.34 percent was down 0.03 of a point.

Six-month gainers were Jaguar, Porsche, Audi and Mercedes-Benz.

Mercedes-Benz sales rose 2.87 percent with sales topping last year's in every month but January.

Audi showed a year-to-date gain of 19.13 percent; Porsche recorded a six-month increase of 12.67 percent; and Jaguar posted an 85-unit gain.

The biggest-volume European brand, Volkswagen, dropped nearly 1,000 units from its 1989 half-year mark, to 72,105.

Alfa Romeo sales were down 18.64 percent. But with the introduction of the new 164 model, things are looking up. Alfa sales doubled in June to 484.

Range Rover, BMW, Saab and Volvo were down. Volvo, which was the only sizable European importer to post a sales gain in 1989, showed a sales decline in every month but February. Volume was down 7.06 percent through June, to 49,300.

Small-volume importers Sterling and Peugeot had substantially lower sales for the six months. Sterling sales were down 30.29 percent, and Peugeot dropped 22.53 percent.

And Yugo, still struggling after emerging from bankruptcy last January, was down 29.78 percent.

— Jim Henry

Model change will be fast, say analysts

By Wes Brown
SPECIAL CORRESPONDENT

With very few exceptions, carmakers will have a relatively short and smooth changeover and vacation schedule this summer. Total car inventory as of July 1 was a 64-day supply, up from 63 days.

Automakers are using other means to keep levels in line.

"Automakers are preferring to have brief, temporary shutdowns instead of lengthening the model changeover shutdown times," said Thomas O'Grady of Integrated Automotive Resources of Wayne, Pa.

He did point out, though, that without a sales pickup, "short shutdowns are not efficient."

Since *Automotive News* published the preliminary car plant changeover schedule May 14, Chrysler Corp. shortened vacation by one week each at three plants.

Meanwhile, Chrysler Motors' St. Louis No. 2 minivan plant in St. Louis will be down 20 work days beginning July 30. The company's minivans are being restyled for the 1991 model year.

General Motor's Reatta Craft Center in Lansing, Mich., will be down 25 work days beginning July 23 for vehicle changeover, a week longer than anticipated. On July 1, there was a 174-day supply of the Buick Reatta.

GM also extended summer shutdowns at the Bowling Green, Ky., and Oklahoma City, Okla., car plants and moved back the shutdown at Wilmington, Del., a week.

The longer light-truck shutdowns include GM's Tarrytown, N.Y., APV plant, which will be down 15 days starting July 30, and its Lordstown, Ohio, van plant, down 15 days beginning July 9.

Ford Motor Co.'s truck plants, which closed for vacation July 2-13, all have weekend model changeovers.

Since the preliminary car schedule, Ford has added a one-week layoff at the Dearborn, Mich., Mustang plant in addition to a two-week vacation.

O'Grady said it is unlikely that UAW negotiations with the Big 3 automakers will result in each company building inventory levels in anticipation of a strike. Negotiations begin Wednesday.

NHTSA turns down 5-mph-bumper plea

WASHINGTON — The federal government has denied another request that it reinstate the requirement that bumpers on new cars sustain virtually no damage in impacts of 5 mph.

Two consumer groups had asked the National Highway Traffic Safety Administration to require stronger bumpers. They based their arguments on insurance crash data. The Insurance Institute for Highway Safety and Consumers Union argued that bumpers must be upgraded because insurance costs have increased as a result of weaker bumpers.

NHTSA said the insurance studies were conducted on a limited number of car models.

The government reduced the bumper standard to 2.5 mph in 1982, saying the savings in repair costs were not worth the extra production costs and the burden on fuel economy.

States hit for generosity with federal funds to transplants

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A Washington political debate stirred up by a *Reader's Digest* article has stung two Japanese automakers in the United States, but it may end up hurting a group of Chrysler Corp. workers the most.

The U.S. Department of Labor has reprimanded state officials in Kentucky and Indiana for being overly generous in providing federal training assistance money to Japanese transplant automakers.

Kentucky was asked to repay some of the funds it supplied to Toyota Motor Manufacturing U.S.A. Inc. in Georgetown. And Indiana officials believe they may be asked to repay some federal money granted to Subaru-Isuzu Automotive Inc. in Lafayette.

State-level observers say the controversy signals the beginning of a more conservative mood in Washington toward federal employee-training programs. Some believe new, stricter guidelines are coming to programs that have helped place workers at transplant and domestic automakers during the past decade.

The funding issue is already being partially blamed for last month's denial of federal retraining funds for over 4,000 workers at a Chrysler plant in St. Louis scheduled to close in November.

That denial by the Labor Department, which involves money from a separate but similar retraining fund, is being reconsidered after a protest from the Missouri congressional delegation.

The state reprimands came on the heels of a June congressional hearing into the Labor Department's handling of $21 billion in Job Training Partnership Act funds during the past seven years. The Labor Department supplies Job Training Partnership funds to states for use in retraining "economically disadvantaged" workers, loosely defined as those who face barriers to getting a job.

According to a Labor Department spokesman, the hearing was called in response to a March *Reader's Digest* article alleging rampant abuse in the Job Training Partnership system, including money that wasn't used for training and employers who accepted training money for jobs that didn't require training.

Job Training Partnership dollars helped Toyota place 340 eligible workers at its new Kentucky plant. The hearing concluded that almost $2.6 million had been used to train workers Toyota would have hired anyway.

The state, which had provided an extra $48 million of its own to help train all of the plant's 3,100 workers, responded by repaying the money with state funds.

Brad Hughes, a spokesman for Kentucky's state employment office in Frankfort, termed the matter "unfortunate" and said that Kentucky had been given prior Labor Department approval to use the Job Training Partnership funds as it wished.

"To our dying day, it will be our regret that bumbling federal people in Atlanta and Washington encouraged us to use the money in the first place," Hughes said.

The Labor Department has similarly chastised the Indiana Department of Employment Training for committing about $8 million in Job Training Partnership funds to Subaru-Isuzu Automotive Inc. in Lafayette. About $2.5 million of that amount is currently being questioned by the Labor Department, according to a spokesman for Indiana Gov. Evan Bayh.

Indiana suspended Job Training Partnership payments to the carmaker earlier this year after being notified to expect official criticism.

The federal money is just one piece of a $71.9 million training package that Indiana promised Subaru-Isuzu to attract the $550 million car plant in 1986. A final report from the Labor Department later this month may require the state to repay the $8 million.

The governor's spokesman indicated that if Indiana is required to repay, Subaru-Isuzu could be asked to shoulder some of the cost.

"We want to work this out to the satisfaction of all parties," he said. "We're trying to make sure that the (Labor Department) audit doesn't result in the depletion of other state funds. And at the same time, we don't want to impede the profitability of SIA."

Some observers believe the crackdown will lead to a new policy in federal training assistance. Until now, federal dollars have been given to state employment offices and economic recruitment operations to dispense at will. The money typically has been provided directly to employers to support specific plant hiring needs.

Speculation now is that future federal funding will be more restricted to general training programs that do not exclusively benefit specific employers. Such a move would dry up one source of state support to manufacturers.

Although the setback to workers at the LeBaron-Daytona plant in St. Louis involves a different federal retraining fund, officials there say the situation is related.

Chrysler and the UAW had requested money through the federal Trade Adjustment Assistance program, created to aid workers who have been displaced by import competition. The fund supplements laid-off workers' income by about $160 a week to enable them to learn new job skills.

But the Labor Department ruled the closing was the result of purely domestic industry competition and its workers were ineligible for trade adjustment assistance.

JTPA FUNDING IN SELECT RECENT AUTO PLANT PROJECTS

Plant/location	Amount state promised for worker training	Portion to be supplied in JTPA funds
Subaru-Isuzu Automotive Inc./Lafayette, Ind.	$71.9 million	$8 million
Toyota Motor Manufacturing USA/Georgetown, Ky.	$55 million	$6 million
Diamond-Star Motors Corp./Normal, Ill.	$39 million	$512,000
Saturn Corp./Spring Hill, Tenn.	$30 million	0

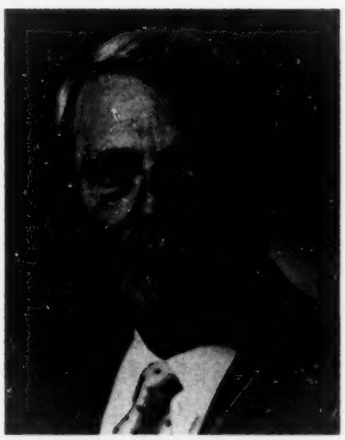
"WE ARE THE STANDARD IN VEHICLE SERVICE CONTRACTS BECAUSE WE'VE NEVER CONSIDERED BEING SECOND BEST."

Dick Vallano
Senior Vice President, Marketing
Universal Underwriters Group



From our beginning in 1922, we set our sights on excellence. This is true of our products, services and our commitment to you and your customers.

Now as some vehicle service contract companies are questioned, we again stand out as the standard others try to imitate.

The factory offers less profit, and third-party administrators leave you with more risk. We are the alternative: more profit and less risk.

Rated A+ "Superior" by A.M. Best, Universal Underwriters directly insures, underwrites and administers all of its products including vehicle service contracts. With over $956 million in assets, we can assure you that we'll be there when it's time to pay claims. You deal directly with us.

We are the standard — second to none.

UNIVERSAL UNDERWRITERS GROUP

The smart choice in tough times.

INCENTIVES

FROM PAGE 2

1991 Escort they sell during the program. There is no sales qualifier for small dealers.

Also, Ford is offering $2,000 dealer cash on 1989 Taurus SHO and $1,000 on 1990 Taurus SHO models. It is also offering $500 on 1989 Ranger.

Ford is also offering dealer cash incentives on 1989 and 1990 Taurus (excluding SHO) and 1989, 1990 and 1991 LTD Crown Victoria until Aug. 8. If combined Taurus and Crown Victoria sales add up to one or two cars, the dealer receives no rebate. If the combined sales add up to three or four cars, the dealer receives $100 per car. Five to seven sales earn the dealer $300 per car, and eight or more bring the dealer $600 per car. The same program is in effect on Sable and Grand Marquis for Mercury dealers.

Puerto Rico and U.S. Virgin Island dealers will receive $400 per eligible Taurus and Crown Vic on each sale made to a resident of the 50 United States. Those buying on Ford's A, X and Z plans (employees, retirees and suppliers) qualify for $350 on eligible Taurus and Crown Vic models in addition to any other customer cash programs on those cars.

Toyota (1989-1990 models)		
Tercel, Camry, Corolla	$200-$1,200, quota	Sept. 4
Trucks	$300-$1,400, quota	Sept. 4
Volvo (1989-90)	$200-$600, based on number sold	Aug. 31

*Quotas apply on Eclipse and 2wd pickups in some regions.

*Customer rebate or dealer rebate; dealer's choice.
**$3,000 in California

Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

Ford is offering $75 to $500 in salesperson incentives and $15 to $125 in sales manager incentives on 1991 Escort two-doors (excluding Escort GT) and on 1991 Explorers with manual transmission.

In regional incentives, Ford is offering a $2,000 rebate or financing as low as 6.9 percent on 1989 and 1990 Aerostars. The offer includes Massachusetts, Rhode Island, Connecticut, New Hampshire, Maine, Vermont and the New York state counties of Clinton, Essex, Franklin and Hamilton

Ford is also extending a special Tempo regional customer and salesperson incentive for residents of Connecticut, Delaware, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island and Vermont. Buyers of 1989 or 1990 Tempos in those states are eligible for a $900 rebate or financing as low as 7.9 percent for 12 to 48 months.

Salespersons who sell to residents of those states are eligible for a random draw cash incentive of $75 to $500.

Ford is also offering $1,100 or financing as low as 7.9 percent for 48 months on 1989 and 1990 Festivas in Alaska, Washington, Oregon, California and Hawaii.

Ford is offering up to $600 on 1989 and 1990 Taurus (excluding Taurus SHO) and 1989 and 1990 Probes in California depending on the number of units sold. The payments are not retroactive to the first sale.

Small dealers — 300 or fewer units annually — receive $300 per eligible Probe and Taurus sold during the period. Ford dealers in Puerto Rico and the U.S. Virgin Islands receive $400 for each Probe and Taurus sold to a resident or enterprise of California. Those buying under A, X or Z plans receive a $300 cash rebate in addition to any other consumer incentive on eligible Taurus and Probe models.

In addition, customers in California are eligible for a $1,250 rebate or financing as low as 7.9 percent for 48 months on 1989 and 1990 Probe.

As noted, Lincoln-Mercury dealers earn $200 to $500 on 1991 Tracers and $100 to $600 on 1989, 1990 and 1991 Grand Marquis and Sable, depending on the number sold.

The dealer incentive on the 1990 Town Car is $1,500 to $2,500. On 1990 Mark VII and Continental, dealers earn $1,500 to $2,000. Lincoln dealer payments depend on number of cars sold.

Ford Motor Co. has also extended its first-time buyer test-market program to Aug. 8. The program was scheduled to end July 9. Ford is offering first-time buyers who are residents of California, Texas, Florida, Massachusetts, Rhode Island, Connecticut, New Hampshire, Maine and Vermont a $500 cash rebate on 1989, 1990 and 1991 Tempo, Probe, Mustang, Escort, Festiva and Ranger.

The first-time buyer incentive can be used in addition to any other customer incentive available except the college graduate and Ford employee purchase programs.

The first-time buyer incentives are: Festiva, $900; Escort, $1,000; Tempo, $700; Taurus, $900; Thunderbird, $1,300; Crown Victoria, $1,000; Topaz, $700; Sable, $900; Cougar, $1,300; Continental, $1,500; Mark VII, $2,000.

Ford's truck rebates to consumers include: Aerostar, $600; Bronco II, $1,500; Bronco, $1,500; Ranger, $1,000; F-Series, $600; and Econoline/Club, $600.

PRODUCTION

72,982 cars assembled in slack week

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Last week's targeted domestic auto production remained low with several plants down for model changeover and vacation. Ford Motor Co. and Chrysler Corp. car plants were closed.

U.S. auto output of 72,982 cars was 7.82 percent more than the previous holiday week and 30.47 percent above the year-ago week.

Truckmakers estimated assembly of 41,552 units last week, 7.33 percent above the prior week and 6.94 percent above the 1989 week.

Companies split last week's estimated production as follows: General Motors, 66.64 percent; Honda of America Manufacturing Inc., 11.63 percent; Toyota Motor Manufacturing U.S.A. Inc., 6.03 percent; New United Motor Manufacturing Inc., 5.62 percent; Mazda Motor Manufacturing (USA) Corp., 5.49 percent; Diamond-Star Motors Corp., 3.84 percent; and Subaru-Isuzu Automotive Inc., 0.75 percent.

GM's Willow Run, Mich., and Van Nuys, Calif., plants remain idle until July 23.

Chrysler assembly plants closed last Monday for model changeover with the exception of the St. Louis No. 2 minivan plant and the Warren, Mich., truck plant.

The St. Louis plant will close at month-end for a four-week changeover to restyle minivans. The Warren facility closed June 25 for model changeover and is expected to resume output today.

Chrysler revised the changeover dates originally reported to *Automotive News* and listed on Pages 22-23 of this issue. The revised dates are July 9-20 for the Newark, Del.; St. Louis No. 1; and Sterling Heights, Mich., car plants and June 25-July 13 for Warren Truck.

Ford plants reopened today after a two-week vacation. As previously reported, the Dearborn, Mich., Mustang facility will remain closed an additional week for inventory adjustment.

Diamond-Star and Mazda returned to work last Monday after a one-week changeover.

Nissan closed it's Smyrna, Tenn., plant last week for changeover. It is scheduled to reopen July 23.

Canadian output tops year ago

Canadian makers scheduled 17,906 cars last week 44.51 percent above the prior week and 40.74 percent above the year-ago week.

Last week's estimated truck production of 10,092 was 16.21 percent above the previous week and 56.54 percent above last year.

Ford's Canadian workers returned today from a two-week vacation. Honda's Alliston, Ontario, plant resumed output last Monday after a one-week vacation shutdown.

Canadian production in the first half of this year totaled 543,033 cars, 4.12 percent above 521,536 in 1989. First-half truck output of 472,784 was 10.73 percent below last year's 529,626.

Chrysler's encore: P-car America

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. will launch 1991 Dodge Shadow and Plymouth Sundance "America" models and market the compacts as the lowest priced air bag-equipped sedans built in the United States.

Chrysler is betting the America marketing strategy will beef up its sales in the bottom end of the market, where volume has sagged since production of the Dodge Omni/Plymouth Horizon subcompacts ended in February.

Dealers said they have told Chrysler executives that the base price of the P-car Shadow/Sundance America models must be less than $8,000. The base retail price for the 1990 Shadow four-door is currently $8,985. The base price of the Sundance is $9,045.

Rick Tomkinson, chairman of the Chrysler-Plymouth National Dealer Council, said the council has asked for a base price of $6,995 on the 1991 Sundance America.

Ken Meade, chairman of the Dodge National Dealer Council, said that the group seeks a base price of $7,395 on Shadow America.

Dealers have not been notified of final pricing, although the company has been determining 1991 pricing in recent weeks. The price of the Shadow and Sundance America models is expected to be identical.

The America strategy relies on simplifying and reducing option offerings. That in turn creates manufacturing cost savings, which permits a lower sticker price.

Dealers said the base America model will be equipped with a manual transmission. Tomkinson said dealers anticipate that when equipped with automatic transmission and air conditioning, the America model will retail for between $8,100 to $8,200.

Chrysler will continue to offer standard versions of the P-car. Dealers have not been notified of 1991 tentative retail prices for those cars.

The America P-cars will be differentiated from the standard versions by the absence of door and body side moldings.

One noticeable difference between the 1991 Sundance America and the 1990 Sundance pictured here will be the absence of body and door side moldings.

All P-cars are equipped with passenger-side air bags.

The imported Geo Metro four-door sedan is now the lowest-priced sedan in America. It has a base retail price of $6,995. Remaining 1990 Omni and Horizon models have a $6,995 sticker price.

The P-cars' domestic sedan competition includes the Chevrolet Cavalier VL, which had a base price of $7,777 in 1990; 1990 Pontiac Sunbird LE, which carries a

Hot laps

As part of their 11-day, 1,625-mile adventure, solar-powered cars competing in the GM Sunrayce USA circled the famed Brickyard in Indianapolis, albeit at lower speeds than those posted in May. The University of Michigan entry beat those of 31 other colleges with an average speed of 22 mph. Story on Page 3.

New GM franchise adds dealer clout; NADA hails pact

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' new franchise agreement promises sweeping changes for resolving disputes and for obtaining dealer opinion in crucial decisions.

GM officials will begin explaining the contract to dealers today.

Dealers who worked on it are hailing the five-year contract, which takes effect Nov. 1, as the most dealer-sensitive in the auto industry.

For the first time, sections of the franchise agreement will differ among GM's five car divisions and GMC Truck. And the contract replaces the current arbitration system, which relies on a company-paid retired judge. Variations of binding or non-binding arbitration will be used to settle disputes between dealers and the divisions.

Ray Green, president of the National Automobile Dealers Association, praised GM for allowing dealers to help write the contract and for providing formal mechanisms for dealer input into company decisions. Those decisions could relate to products and marketing as well as standards for dealership design, equipment and training.

"It's No. 1 in the industry," Green said. "There just isn't any other agreement today that provides for dealer input and dealer decision-making that this does."

Green and other NADA representatives helped put together the agreement. He said it was close to a model agreement he proposed last winter when he took office. He said he will encourage other auto companies to follow GM's approach. Franchise agreements at Ford Motor Co. and Chrysler Corp. have no expiration date.

GM officials and dealers involved in drafting the agreement would reveal few details until it is distributed to GM's 9,595 dealers.

Besides the dispute-resolution process, the agreement traditionally also contains specific sales tar-

CHANGING GEARS: *Saab's Helling is back, with a steep hill to climb*

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

ORANGE, Conn. — Robert J. Sinclair is handing day-to-day control of Saab-Scania of America Inc. to his long-time No. 2 man, Sten O. Helling, after an up-and-down reign that's lately been going downhill.

Helling, 52, will become president of the importer. He returns after a year of semi-retirement as a full-time Saab marketing consultant.

Sinclair, 58, assumes the newly created position of chairman and chief executive officer.

"This is more than just a paper change," said Sinclair, who has headed Saab since 1979. "It's now his (Helling's) company to run on a daily basis." The two men have worked closely together for 23 years, first at Volvo, then at Saab.

Helling will take over an operation that is trying to put an end to three years of sales bloodshed. Last week, Saab laid off 37 workers at its headquarters in an effort to adjust to lower volume. The company also gave itself a new name: Saab Cars USA Inc., to reflect its divorce from the Scania Truck Division earlier this year.

Ford's pre-intro '91 prices show hike of $581 on cars

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. announced pre-sell base prices on 1991 cars to its dealers last week. An *Automotive News* analysis shows that the prices are up an average of $581 or 3.89 percent over current stickers of 1990 or spring-launch 1991 models.

The analysis is sales-weighted, but it does not include adjustments for year-to-year equipment changes.

Price increases on 1991 Ford Division cars range from $271 on the Probe GT coupe to $1,048 on the Mustang LX coupe equipped with a 5.0-liter V-8. For Lincoln-Mercury, the range is $217 on the Cougar LS to $1,493 on the Mark VII Bill Blass coupe.

Fall prices for the imported Ford Festiva and Mercury Capri were not announced.

The company raised prices in June on all its cars except Ford Festiva, Escort and Probe and Mercury Tracer. That boost plus last week's hike equals

Solar car race sparks engineering, financial ingenuity

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — They looked like fish. They looked like insects. They even looked a bit like ground-bound ultra-light aircraft. They did *not* look like automobiles.

But that is exactly what the sun-powered racers were that hummed and trembled across the finish line at General Motors' Warren, Mich., Technical Center last Thursday. There they ended a 1,625-mile odyssey/race that started in Florida on July 9.

The University of Michigan took first place with a total elapsed time of 72:50:47. Second place went to Western Washington University with a time of 74:10:06. Third was awarded to the University of Maryland with a time of 80:10:55.

"We won because we were reliable," said Jeff Pavlat, team group leader for the University of Michigan car's solar array. "We used a silicon sealer on our solar array so that we were waterproof and could run in the rain. The silicon reduced the efficiency of our array by 5 percent. But some of our closest challengers didn't make their arrays waterproof. There was lots of rain. And we were the only school to finish all 11 legs of the race."

Sponsored by General Motors, Chevrolet, the SAE and the U.S. Department of Energy, GM Sunrayce USA was conceived as an opportunity for students to convert class lessons into rolling reality.

But the race's greater goal is to inspire and encourage a new generation to pursue studies, and ultimately careers, in engineering and science — maybe even electric-car science.

Many automakers are examining quite closely the possibility of producing and marketing electrically powered vehicles. These models would be sold in areas of the country, like the Los Angeles Basin, where emission standards for combustion engines are fast approaching — or will soon exceed — the limits of practical technology.

Engineering students from 32 North American colleges conceived, tested and built cars that made the cross-country trip powered only by sunshine — what little of it there was.

Form follows function. The cars had to be sleek, light and super efficient. But because they were racing on public roads with different surfaces and possibly in foul

Michael Koach applies a rustproof coating at the Tuff-Kote Dinol shop in New Baltimore, Mich. Business at rustproofing shops has declined as automakers have increased the length of their warranties.

Rustproofing business corroding

Improved metals, legal action eat away at dealer profit center

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

New high-tech factory anti-corrosion methods have beefed up vehicle sheet metal's strength against rust's brown bite.

It has also prompted carmakers to ask dealers to refrain from applying aftermarket rustproofing.

This factory resistance to rustproofing — and recent legal action in some states against dealers who rustproof without properly informing customers about factory protection — seriously threatens what has traditionally been a major profit center for new-car dealers, with gross profits typically as much as $100 per vehicle.

Five years ago, 7 million vehicles were rustproofed, representing a $1.4 billion industry, according to Ziebart Corp., but 1990 business may be only half that total.

And the roster of rustproofing's major players has been severely reduced. Since August 1988, Rusty Jones Inc. and Thermo-Guard Inc. — two big players — have filed for bankruptcy protection.

And Tuff-Kote's 130 stores were acquired by Ziebart — which now does about 10 percent of the total retail rustproofing business.

The receding rustproofing business has eroded dealer per-car profits at a time when new-vehicle profits are under terrific pressure.

"To many dealers, what they make on the aftermarket business is the difference between a profit and loss for the entire year," said Frank Soccorsi, national sales program manager for Ziebart.

Toyota's robust U.S. sales expose need for new plant

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Surging U.S. demand is pushing Toyota Motor Co. ever closer to a likely decision: to build more North American factory space.

Toyota sold a record 521,346 cars and trucks in the United States during the first half of 1990, a 19 percent increase over the same period last year.

Although a growing number of those vehicles are being supplied by North American plants, Toyota's capacity is straining to keep pace.

The company's facilities in Georgetown, Ky., Fremont, Calif., and Cambridge, Ontario, will turn out about 376,000 cars this year. The California plant will add 100,000 units of pickup truck capacity next year.

In order to meet its plan to sell 1.5 million vehicles here annually by the mid 1990s — and to build half of them in North America — Toyota would need at least 275,000 additional units of capacity. That's about the yearly output of a typical U.S. assembly plant.

Even if Toyota wanted to rely on imports, it would be difficult. The carmaker's Japanese plants also have little spare capacity.

The commitment to a 750,000-unit North America production level was made earlier this year by Robert McCurry, executive vice president of operations for Toyota Motor Sales U.S.A. Inc.

Company officials acknowledge an increased need for new U.S. production. And there has been increasing speculation — within the company and externally — that a new plant will be announced.

AUTOMOTIVE NEWS / CHARLOTTE WINTER

Toyota's current North American plan is nearly played out:

- The Georgetown plant will build 216,000 Camry sedans this year — 16,000 more than straight-time capacity.
- Next year, Georgetown will add 40,000 more units of capacity to build Camry station wagons by 1992. But at the same time, Toyota Motor Co. has already announced plans to export 40,000 U.S.-built vehicles to Japan. Limited exports have begun from Kentucky and California to Taiwan.
- Both the Canadian plant and the California plant currently build Corollas. Canada recently increased capacity from 50,000 to

LISTEN, BOB:

Experts tell new GM chairman to focus on quality, listen to customers and workers to ensure success

By Heather Hunt
CRAIN NEWS SERVICE

Stempel

When it comes to offering directions to General Motors, there's no shortage of backseat drivers. Advertising Age, *a sister publication to* Automotive News, *asked experts from different fields if they had any advice for Robert Stempel as he takes over as chairman Aug. 1.*

Ralph Nader, consumer advocate

"Take the technological skills of the company and apply them to engineering greater vehicle safety, fuel efficiency, pollution control and lower repair probabilities.

"Be more of a person-to-person executive. Make up for years of lost time and opportunities. Have meetings with consumer groups to reduce the isolation of the 11th floor."

"Approach Washington with a 'can do' attitude instead of the massive negativism of the General Motors of the 1980s. And stop lathering over Washington."

Al Ries, chairman of Trout & Ries, marketing strategists

"The biggest problem is your loyalty to Roger Smith. To get GM moving again, you have to change Smith's strategy.

"GM doesn't have a product problem; it has a positioning problem that can't be solved by introducing a raft of new models every year. GM has way too many models; every division has an entry-level car and a full line of regular models. This is the classic line-extension trap."

Peters

Tom Peters, co-author of *In Search of Excellence, Passion forExcellence* and *Thriving on Chaos*

"Double your pension and take early retirement.

"Seek a replacement from outside the industry; I suggest PepsiCo's Wayne Calloway, The Limited's Les Wexner, RJR Nabisco's Lou Gerstner or General Electric's Jack Welch. If you stay, move GM headquarters out of Detroit: Try Los Angeles or Atlanta.

"Hire Carl Sewell, president of Sewell Vil-

see ADVICE, page 49

Ford pays $100 million for 10% of Cummins

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The $250 million investment by Ford, Tenneco and Kubota will also give Cummins a needed financial boost. The company suffered with the overall decline in the heavy-truck market in the late 1980s.

Ford Motor Co. made another move to become a bigger player in the medium- and heavy-truck industry last week by purchasing 10 percent of Cummins Engine Co. for $100 million.

Ford also acquired an option to increase its stake in Cummins to 20 percent in the future.

Tenneco Inc. and Kubota Corp., also purchased equity stakes in Cummins. Tenneco, . farm equipment, construction equipment and auto parts maker, purchased 10 percent. Kubota, a Japanese tractor maker, purchased 5.4 percent.

As part of the deal, Cummins signed a long-term agreement to supply engines for Ford's medium-duty trucks. Published reports indicated that eventually Cummins will supply all of Ford's medium-range engines. Cummins currently supplies 70 percent of Ford's heavy-duty diesel truck engines, or about 8,400 units annually.

Ford spokesman John Emmert would not comment on the company's future product plans.

The equity purchase also gives Cummins future business opportunities with Tenneco and Kubota. Cummins and Kubota plan to expand and strengthen their complementary diesel engine product offerings and plan to set up a joint venture to manufacture small diesel engines in Europe. Cummins already builds a generator designed by Kubota in the United States under a licensing agreement.

Cummins and Tenneco plan to expand their 50/50 joint venture to produce engines for Tenneco's J.I. Case farm equipment subsidiary.

Cummins is one of the few suppliers in which Ford owns a stake. Others are Mazda Motor Corp. (25 percent), which supplies Ford with vehicles, engines and transmissions; Kia Motors (10 percent), the Korean automaker that supplies Ford with the Festiva; and Ford Lio Ho (70 percent), the Taiwanese firm that imports and makes cars for that market.

Ford has until 1996 to increase its share of Cummins to 20 percent. Tenneco and Kubota do not have options to increase their shares.

The $250 million investment by Ford, Tenneco and Kubota will also give Cummins a needed financial boost. The company suffered with the overall decline in the heavy-truck market in the late 1980s and has sought to branch out into the medium- and light-duty markets. The company has restructured to reduce cost and increase efficiency. In the last three years, Cummins has closed a plant, laid off workers and sold its financial subsidiary for $45 million.

The equity position taken by the three companies in Cummins resulted in Moody's Investor Service reviewing Cummins' credit ratings for a possible upgrade.

Ford announced in April that it is discussing a joint venture with Fiat S.p.A. of Italy for heavy trucks. Emmert said the Cummins deal will not interfere with the ongoing talks with Fiat.

Nissan's Irish joint venture to produce 400 trucks yearly

Nissan Diesel Motor Co. Ltd. of Japan will build 400 trucks a year in Ireland starting in 1992 in a joint venture with Ireland's Scania distributor and a Japanese trading company.

It is Nissan Diesel's first production venture in the European Community. In December, Nissan Diesel announced a joint venture with Iveco, the truck subsidiary of Fiat Auto S p.A., to develop a low-pollution diesel engine.

The Irish venture will build 3.5- and 4.0-ton trucks in a Dublin suburb. Although initial production of 400 trucks a year in 1992 is expected to be sold in Ireland, Nissan Diesel and its partners plan to export to continental Europe eventually. They also plan to build a larger truck.

The Saab-Scania distributor, West Ward Group, will be the exclusive sales outlet for trucks from the venture, named UD Ireland Ltd. West Ward will also provide service.

The light and medium commercial trucks, to be badged UD, will complement the heavy Scania trucks already sold by West Ward, said a Nissan Diesel spokesman.

The venture has started with investment of £500,000 ($905,000). Marubeni Corp., the Japanese trading company, owns 30 percent, and West Ward has 70 percent. In 1992, Nissan Diesel will invest an unspecified amount of money in the project, becoming a third partner.

Marubeni brings negotiating experience to the enterprise.

Ireland will contribute training grants worth about $11,700 for each of the 20 workers employed initially.

At the start, the UD trucks will have only 10 percent local content, made up of such parts as tires and batteries. Ultimately, the goal is for more than 60 percent.

Special Correspondent Aidan O. Sullivan in Dublin, Ireland, contributed to this report.

The new and the old

Overnite Transportation Co. of Richmond, Va., bought 80 WhiteGMC Integral Sleeper tractors to replace 80 1984-model Integral Sleepers that had racked up an average of 1.5 million miles in six years. Taking possession of one of the new tractors are, from left, Overnite's Dennis McCurry, maintenance vice president; A.W. Duke Jr., chief operating officer; and Thomas W. Boswell, chief executive officer. Turning over the truck were Eugene L. Tunila, Volvo GM executive vice president for manufacturing, and Terry Young, president of Southern WhiteGMC. The tractor on the right is the new model.

THANKS FOR THE MEMORY

When an automotive engine electronic controller malfunctions, it is typically removed and replaced by the auto dealer's service department. Future engine controllers, rather than being relegated to the scrap heap, may be diagnosed and returned to service at the auto dealership.

A new technology, known as 5V flash electrically erasable/programmable read only memory, allows automotive subsystems like engine and transmission controllers to be programmed or reprogrammed right in the vehicle. Once a proper network is put in place, dealers across the country could have the ability to download the latest engine specifications direct from the auto manufacturer's mainframe computer, right into the EPROM-based engine controllers of their customers cars.

Such a system could have far-reaching benefits to drivers. For example, a person relocating from Miami to Denver could have his car reprogrammed for maximum efficiency in high altitudes once he arrives in Colorado. Or a "software tuneup" could be made a part of every regularly scheduled maintenance visit to the local garage.

According to Texas Instruments Inc.'s Semiconductor Group in Dallas, which manufactures programmable memory devices, automakers are putting plans in place to convert to the new technology. The company expects flash memory-based engine controllers to appear in automobiles within the next two or three years.

MISFIRE DETECTOR EXTINGUISHES ENGINE PROBLEM

An inexpensive early-warning system, developed by engineering researchers at the University of Michigan, may one day protect drivers from an economic and ecological demon hidden under the hoods of their cars. The culprit is "silent" engine misfires which can cause costly and air-polluting catalytic-converter damage.

At a recent demonstration of the new U-M system in Ann Arbor, Mich, William B. Ribbens, associate professor of engineering and director of the university's vehicle electronics laboratory, said, "It's important to detect and correct the problems that cause misfires early because continuous misfires can damage catalytic converters which cost $400 to $700 to replace. When misfires occur, the average driver doesn't even notice. At most, the driver may be aware of a slight drop in acceleration."

According to Ribbens, typical causes of engine misfires include a poorly tuned engine, fuel-injector failure and ignition failure. Misfires occur when fuel is incompletely burned in the engine cylinder. Unburned fuel mixed with air passes into the car's exhaust system where it burns in the converter, causing temperatures to rise to damaging levels.

The U-M system is based on a magnetic sensor in the engine crankshaft that measures slight differences in engine speed (revolutions per minute) caused by combustion events. Based on rpm measurements, the sensor estimates the torque or turning force produced by each cylinder, which can be used to detect misfires through a method developed by U-M.

When one cylinder misfires, the sensor records the drop in torque and sends a signal, activating the dashboard indicator-light and notifying the driver to take the car in for service. Using the computer diagnostics feature, shop technicians can identify the misfiring cylinder and correct the problem.

Ribbens estimates the manufacturer's cost of the U-M system — complete with sensor, custom integrated circuit and associated software — to be about $10 per vehicle. U-M has applied for a patent on the system.

BOOK LEARNING AND SERVICE TRAINING GO HAND IN HAND

General Motors' automotive service educational program was an industry first when it was started by Delta College in University Center, Mich., in March 1980. Today the program is offered at 50 colleges and universities nationwide. Equally impressive, many auto companies now have service-technician training programs patterned after it.

GM's program is a two-year associate's degree program that prepares new service technicians for GM dealerships. Prospective students are sponsored by participating GM dealers. Students split time between the classroom and service department at their GM dealer sponsor.

The curriculum features courses not only in automotive technology and electronics, but also in math, reading and communication skills. GM helps train the college instructors and monitors school performance. The company also provides instructor updates, new vehicles, components and diagnostic equipment to keep prospective technicians abreast of the latest advancements.

AUTO CHEMICALS DEMAND TO NEAR $4 BILLION BY '94

North American automotive chemicals demand will increase 5 percent a year in the period 1989 through 1994 to $3.8 billion, according to a business research report produced by The Freedonia Group Inc. in Cleveland.

Other key conclusions in the report, entitled *Automotive Fluids and Chemicals*, are that a growing and aging vehicle stock, a proliferation of improved products and the growing prevalence of fuel injection will continue to stimulate demand for automotive chemicals; that factors moderating growth will be trends toward smaller engines and the introduction of better-performing, longer-lasting products; that appearance chemicals will remain the fastest-growing industry segment, spurred by slower motor-vehicle turnover and more convenient products with superior performance characteristics; and that automotive chemical demand will slightly lag growth in motor vehicles in use due to improved formulations and technological changes.

Maintenance chemicals will experience growth of nearly 6 percent annually to $620 million in 1994, based upon a large and aging vehicle stock, more convenient products and high new-car prices. Total demand for additives will increase 6.7 percent annually to $460 million.

Functional chemicals will remain the largest ($2.4 billion) but slowest-growing segment of the automotive chemicals industry as a result of improved, longer-lasting products and downsized automobiles requiring reduced quantities of chemicals. Motors oils and antifreeze/coolants will remain the dominant automotive fluids due to their frequency and ease of use. Auto lubes growth will result from continued demand for manual transmissions and applications such as door/hinge greases.

North American Automotive Chemicals by Market (million $)

	1989	1994	2000	% Annual Growth '89-'94
Do-It-Yourself	1,431	1,820	2,375	4.9
Professional	1,342	1,730	2,280	5.2
Orig. Equip. Mfgrs.	209	250	295	3.6
TOTAL	**2,982**	**3,800**	**4,950**	**5.04**

Competing against teams from 49 other states, California's Nathan Griffin, 17, kneeling at left, and David Fellows, 18, kneeling at right, of Morrow Bay High School, won first place in the Plymouth/American Automobile Association Trouble Shooting Contest in Washington. Each will receive a $2,500 scholarship and other prizes. Their instructor is Gary Villa, center. The trophy was presented by George Giek, left, director of AAA automotive engineering, and Lou Bitonti, national merchandising manager for Plymouth.

FEDERAL-MOGUL OBTAINS DAMAGES IN CALIFORNIA COUNTERFEITING SUIT

Federal-Mogul Corp. in Southfield, Mich., on June 5 announced a settlement was reached in a civil lawsuit the company brought against an automotive parts distributor for the passing off of automotive parts in counterfeit packaging.

The settlement in U.S. District Court for the Eastern District of California calls for the distributor, doing business as Mid-Valley Industrial Inc. and Hust Bros. Inc., both in Marysville, Calif., to pay Federal-Mogul damages in an amount described as in the "six-figure range."

Mid-Valley is owned by Sondra Lanza, and Hust Bros. by Roy Lanza. Both companies are operated by Roy Lanza. The Lanzas, along with their companies, were named as defendants in the suit.

The lawsuit resulted from the discovery by Federal-Mogul at a Lodi, Calif., auto parts store of thousands of counterfeit boxes containing oil seals not manufactured by Federal-Mogul. The store's owner had attempted to return most of the counterfeit-packaged oil seals, which were of substandard quality, to Federal-Mogul for credit toward updated inventory. In addition, counterfeit-packaged parts were stocked on the store's shelves for sale to customers.

Under deposition, the store's owner testified that the counterfeit packaging and seals were sold to him by Roy Lanza. At the Lanza operation, federal marshals confiscated tens of thousands of counterfeit oil-seal boxes which had been printed without authorization from Federal-Mogul. Lanza admitted that non-Federal-Mogul parts packaged in look-alike Federal-Mogul boxes had been shipped to his own retail stores and other stores for sale to parts installers and end users. Many of the parts were discontinued lines from other manufacturers and had been bought at auction.

In filing the lawsuit, Federal-Mogul cited violations of U.S. trademark laws, Federal Unfair Competition in violation of the Lanham Act, and State Unfair Competition in violation of the California Business and Professional Code and California Common Law Unfair Competition. The Lanzas and their companies admitted to counterfeiting and unfair competition as charged in the complaint.

No criminal charges were filed. However, criminal penalties can include up to five years in prison and fines of up to $250,000 for individuals and $1 million for businesses dealing in counterfeit goods.

Good Help Is Hard to Find

Survey reveals smaller labor pool, few qualified women in field

By: Al Fleming

Finding, hiring and firing technicians are all part of the day in-day out job of dealership service managers. The service department is his ship and he is the captain.

That's the way it was in the past, that's the way it is today and that's the way it is likely to be in the future, according to the 1990 *Automotive News* survey of dealer service managers.

Asked who hires technicians in their service departments, 87.4 percent of respondents said they do. That is down 4.3 percentage points from last year, but pretty much in the same area as previous surveys when figures ranged from 87.6 percent (1985) to 92.3 percent (1988).

However, the survey also shows that dealership owners are playing a more prominent role in hiring service help this year, while dealership managers are participating less.

According to the survey, 18.9 percent of dealership principals currently are taking part in calling the shots on new hires in their service shops. That is an all-time high and 5.3 percentage points above last year.

The rise in hiring participation by dealership owners reflects a tighter grip by owners on controlling operations in a difficult period of falling sales and profits.

At the same time, service-department hiring by dealership managers fell to 2.5 percent this year from 8.3 percent last year, and represented a low point for them.

Around the country, survey statements by service managers regarding hiring practices leave little doubt who they believe is most qualified to handle that task in their domains. Examples:

- Wichita, Kan.: "The service manager has the hands-on experience. He knows the department needs better than anyone. He's most qualified to do the hiring."
- Charleston, S.C.: "Only I, as service manager, know what I want and where to get it. The service people work for me, not the owner or sales manager."
- Galveston, Texas: "I'm the most qualified to interview technicians. I know a good one when I see one — usually."

But how about finding service help? Is it any tougher or any easier to find competent service technicians in 1990 than it has been in recent years.

The survey indicates skilled people are still plenty tough to come by. Of service managers surveyed, 67.3 percent said it is more difficult to find competent help today than it was a year ago.

There are a number of reasons why getting qualified people remains difficult: There simply are not enough skilled mechanics, particularly with computer and electronics knowledge, to meet demand; the pace of vehicle and service technology is outrunning the pace of training people; and other industries are competing for skilled personnel by offering higher pay and greater benefits.

This hardly bodes well for auto dealerships and the motoring public as vehicles become more electronically sophisticated.

"It's hard to find skilled people who can keep up with today's technology," said a service manager in a Chicago suburb. "You can get less-qualified people, but not enough who are properly schooled and trained. Believe me, good technicians are not walking the streets. Only the bad ones are, and the thieves and crooks."

A service manager in Rochester, N.Y., said, "In my county, there were 6,350 high-school grads in 1985. In the same county in 1990, there were less than 3,200 grads. There's a shrinking labor pool here."

One in Sacramento, Calif., said, "It's hard to find a dedicated technician who will keep abreast of new-car changes and attend technical training programs. We need them because vehicles are more complicated. There's more electronics. But it seems more technicians are leaving the field than entering it."

A service manager in Salem, Ore., put another spin on the subject. "We now drug-test for all new hires, and it's cutting down the number of available applicants," he said.

Meantime, while women car ownership is climbing and females are finding successful careers in many businesses and industries, the auto service bay remains a male's haven.

Only 3.8 percent of service managers surveyed said they have women on their payrolls. The dearth of female mechanics, the survey suggests, boils down to one key reason: There are very few qualified female applicants for auto-service jobs.

A service manager in Sioux City, Iowa said, "I think they could do the work, but there doesn't seem to be any interest by women. I have never had a woman apply. If a qualified woman would apply, I would hire her."

One in Pierre, S.D., said, "Women I've interviewed are interested in automotive careers, but not in repairing vehicles. I have no objections to employing women, but I haven't had any experienced applicants."

One in Wausau, Wis., said, "We have women working in our clean-up department, but there are no trained women technicians in this area that I'm aware of. At least, I haven't found one. I'd take them if I could get them."

Another in Rutherford, N.J., said, "I have had them in the past and expect to have them in the future. I have no problem with them, but I've never yet found one really interested in this field. If a woman were qualified, I'd look at her on the same basis as a man."

But there also are gripes by service managers who have had unhappy experiences.

"I've tried women. They whine too much. They're absent too much. They lower shop productivity, and the male technicians harass me about it," said a service department director in Asheville, N.C.

Another in New Orleans said, "The women complained that we don't have space for a separate dressing room."

Without a doubt, the service department is still a man's world. □

Automotive News Survey of Dealer Service Managers

Note: Figures indicate percent of total responses for each question, each year; in some cases, totals do not add to 100 percent because either multiple responses to a question were given or no response was given. Blank areas indicate questions that are new to that year's survey.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

	Automobile Market 1990	1989	1988	1987	1986
Improve	36.5	34.1	44.3	50.0	61.2
Same	36.5	38.6	39.2	27.9	32.6
Worse	23.3	23.5	12.4	22.1	6.2
	Dealership 1990	1989	1988	1987	1986
Improve	62.9	74.2	78.4	74.3	88.0
Same	24.5	17.4	16.5	20.0	8.0
Worse	6.9	6.1	1.5	5.7	4.0

Question 2: Do you, as a service mnager, feel that your service department offers a potential for increased profits in the future?

	1990	1989	1988	1987	1986
Yes	92.5	95.5	94.8	94.4	98.0
No	5.7	3.0	5.2	5.6	2.0

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	1990	1989	1988	1987	1986
Yes	88.7	95.5	92.8	90.0	96.0
No	8.2	1.5	6.2	10.0	4.0

Question 4: Do you, as a service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	1990	1989	1988	1987	1986
Yes	67.9	65.9	67.5	62.5	74.0
No	28.9	33.3	30.4	37.5	26.0

Question 5: Who hires the service technicians in your service department?

	1990	1989	1988	1987	1986
Dealership owner	18.9	13.6	11.3	18.1	15.5
Dealership manager	2.5	8.3	5.7	2.7	2.9
Service manager	87.4	91.7	92.3	91.7	88.9
Other	1.3	9.8	10.8	—	—

Question 6: Compared to last year, finding competent service technicians today is:

	1990	1989	1988	1987	1986
Less difficult	6.9	4.5	3.1	—	—
Same	25.2	22.7	23.7	—	—
More difficult	67.3	71.2	71.1	—	—

Question 7: Do you have women service technicians?

	1990	1989	1988	1987	1986
Yes	3.8	1.5	5.2	—	—
No	96.2	98.5	92.3	—	—

Question 8: When your dealership buys new service equipment and services, are you involved?

	1990	1989	1988	1987	1986
Yes	96.2	97.0	96.4	100.0	100.0
No	2.5	2.3	3.6	0.0	0.0

If yes, which one statement below best describes you involvement?

	1990	1989	1988	1987	1986
Originate purchase request	54.1	59.8	57.6	53.5	62.0
Approve makes(s) selected	13.2	9.4	7.6	9.4	8.0
Negotiate terms	6.9	5.0	2.1	1.7	2.8
Give advice on needs	22.6	20.8	19.2	22.2	18.0

Question 9: Does your dealership plan to buy any service equipment this year?

	1990	1989	1988	1987	1986
Yes	60.4	49.2	58.8	59.2	55.0
No	37.7	46.2	38.1	40.8	45.0

If so, what type?

	1990	1989	1988	1987	1986
Tuneup	5.9	5.4	15.8	30.9	24.5
Wheel alignment	9.3	9.6	31.6	21.4	26.4
Wheel balance	2.5	2.3	12.3	14.3	11.8
Brakes	3.8	6.9	15.8	11.9	7.1
Transmissions	2.5	2.7	2.7	2.5	2.9
Engine overhaul	2.1	3.1	1.8	3.5	3.7
Refinishing	2.5	4.6	4.0	4.5	1.8
Frame-body straightening	0.3	0.2	0.7	1.1	0.8
Computerized diagnostic (console)	15.7	17.7	19.7	—	—
Computerized diagnostic (hand held)	9.3	6.2	9.3	—	—
Other	18.2	21.5	25.4	26.6	30.0

Question 10: Are 1990-model cars more profitable to service than those of previous years?

	1990	1989	1988	1987	1986
Yes	9.4	8.3	8.2	12.5	13.7
No	41.5	37.9	43.8	40.3	50.9
Same	47.2	52.3	46.4	47.2	35.4

Calling the Shots

When it comes to buying equipment managers still have the last word

By: Al Fleming

When it comes to purchasing new tools, equipment and machinery for auto dealership shops, service managers are right in the thick of things.

Only 2.5 percent of those surveyed by *Automotive News* said they are not involved in the acquisition of service equipment. That is similar to last year's response (2.3 percent).

More than 96 percent said they participate in buying new equipment, also similar to last year (97 percent).

What's more, service managers are in an equipment-buying mood this year, more so than any time since the mid-1980s, with 60.4 percent saying their dealerships plan to go shopping for service equipment this year. That is up from 49.2 percent a year ago, but down slightly from the peak purchasing-intent year of 1985 (61.5 percent).

Computerized diagnostic equipment heads the list of requirements this year. Of service managers surveyed, 25 percent said they are in the market for this kind of equipment; 15.7 percent said they planned to buy console-type diagnostic units; and 9.3 percent listed hand-held types.

So much for spending money. How about making some? What's the profit outlook for 1990? Are 1990 model cars more profitable to service and repair than those of previous years? And are they more difficult to service than cars of the 1980s?

Of those surveyed, only 9.4 percent said 1990 models are greater profit generators in the service bay than cars of the past; 41.5 percent said they are less profitable, 47.2 percent said they are the same.

What's the problem?

"Electronic diagnostics have not kept up with vehicle electronics," said a service chief in Phoenix. "Manufacturers are late in releasing information. That means diagnosis is more difficult and more diagnostic time is required."

However, another in Lynn, Mass., said, "The newer the car, the more profitable because of the length of warranty periods. It's good business."

Noted a service manager in Boise, Idaho: "We're not having any difficulty with servicing GM products because technically they have changed very little in the past 2-3 years. We are working on the same engines and transmissions with the same scheduled maintenance recommendations."

A Santa Ana, Calif., service manager said, "New cars are less profitable. Service intervals have lengthened, the required services have been decreased, and the complexity of repair makes it more difficult to beat flat-rate times. Vehicle computerization and the complications added by smog regulations have created an electronic nightmare. Although we are finally getting diagnostic equipment and the training to go along with it, there will still be lag times before all technicians are up to speed."

From other parts of the country came these observations:

Provo, Utah: "Today's new cars are too complex to service properly while trying to stay competitive with the mass merchandisers. Cars are becoming electronic toys. It's even too difficult to speedily reach some components."

New Orleans: "The '90 cars are more profitable. It's becoming easier to diagnose problems, and prices for parts and labor are rising. Better equipment makes up

Question 11: Are 1990-model cars more difficult to service than those of previous years?

	1990	1989	1988	1987	1986
Yes	48.4	37.1	40.7	—	—
No	21.4	25.8	25.3	—	—
Same	30.2	36.4	33.0	—	—

Question 12: How many hours per week is your service department open?

	1990	1989	1988	1987	1986
Less than 45 hours	16.4	20.5	12.9	11.1	18.0
45 to 50 hours	40.3	43.9	38.7	54.2	60.0
51 to 55 hours	20.5	15.9	22.7	20.8	14.0
56 to 60 hours	14.5	11.4	11.9	9.7	6.0
More than 60 hours	8.8	8.3	13.9	4.2	2.0

Question 13: How many employees are there in your service department including parts and service personnel?

	1990	1989	1988	1987	1986
1 to 10	26.5	29.5	23.2	25.0	28.0
11 to 20	33.4	34.1	32.0	27.8	18.0
21 to 30	10.1	10.6	15.5	33.4	36.0
31 to 40	14.5	13.6	11.3	6.9	8.0
More than 40	13.7	12.1	17.5	6.9	10.0

Question 14: What is your most profitable service operation?

	1990	1989	1988	1987	1986
Tuneup	30.2	39.4	37.6	50.7	24.0
Wheel alignment	9.7	15.2	12.9	14.5	6.6
Wheel balance	4.5	4.5	8.2	8.7	4.0
Brakes	24.1	28.0	32.0	34.8	25.3
Transmissions	15.0	22.0	13.9	15.9	6.6
Engine overhaul	7.0	15.2	9.8	10.1	13.3
Rustproofing	2.5	3.8	12.9		
Body shop	5.5	7.6	10.3	11.6	9.3
Other	29.1	20.5	14.9	13.0	10.6

Question 15: How much of the following contribute to your service profits?

1990	Significantly	Some	None
New car warranty work	38.4	53.5	4.4
Extended service contracts	31.4	61.0	3.1
General customer drive-in	64.2	32.1	0.0
Special service packages	45.9	40.9	7.5
1989	**Significantly**	**Some**	**None**
New car warranty work	37.9	56.8	1.5
Extended service contracts	25.0	65.2	6.8
General customer drive-in	77.3	21.2	0.0
Special service packages	40.2	51.5	4.5
1988	**Significantly**	**Some**	**None**
New car warranty work	41.2	50.0	7.2
Extended service contracts	36.1	56.2	3.6
General customer drive-in	73.6	23.8	0.0
Special service packages	38.7	46.9	7.7
1987	**Significantly**	**Some**	**None**
New car warranty work	40.3	54.2	5.5
Extended service contracts	34.3	62.9	2.8
1986	**Significantly**	**Some**	**None**
New car warranty work	40.8	48.9	10.2
Extended service contracts	27.0	66.6	6.4

Question 16: Do you subcontract service work to specialists for jobs involving high-tech repair?

	1990	1989	1988	1987	1986
Yes	53.5	41.7	—	—	—
No	45.3	58.3	—	—	—

Question 17: Has your shop had any difficulties with today's high-tech basecoat/clearcoat paints?

	1990	1989	1988	1987	1986
Yes	40.3	40.2	—	—	—
No	56.0	53.8	—	—	—

Question 18: Does your service department offer quick lube/oil change service?

	1990	1989	1988	1987	1986
Yes	44.0	47.7	—	—	—
No	55.3	50.0	—	—	—

Question 19: If not, does it plan to in the near future?

	1990	1989	1988	1987	1986
Yes	20.8	50.0	—	—	—
No	77.2	48.5	—	—	—

Question 20: Does your service department offer detailing to customers?

	1990	1989	1988	1987	1986
Yes	50.9	65.9	—	—	—
No	48.4	32.6	—	—	—

Question 21: If not, does it plan to in the near future?

	1990	1989	1988	1987	1986
Yes	8.8	7.0	—	—	—
No	91.2	93.0	—	—	—

Question 22: What is your age?

	1990	1989	1988	1987	1986
18 to 24	1.3	1.5	2.1	2.9	4.0
25 to 29	3.8	13.6	8.8	9.7	16.0
30 to 34	15.1	13.6	18.6	15.3	16.0
35 to 39	28 9	21.2	20.6	26.4	26.0
40 to 44	20.1	19.7	18.6	20.8	16.0
45 to 49	10.7	14.4	12.9	8.3	10.0
50 to 54	6.3	9.8	8.8	6.9	2.0
55 to 59	6.3	2.3	5.7	6.9	4.0
60 to 64	7.5	3.0	2.1	1.4	6.0
65 or over	0.0	0.0	1.0	1.4	—

Question 23: Before becoming a service manager at your present or at any other dealership what type of job did you have?

	1990	1989	1988	1987	1986
Write-up man	44.0	34.8	34.2	30.6	24.6
Mechanic	27.0	49.2	51.0	43.4	43.4
Parts manager	9.4	15.2	21.1	7.3	8.6
Other	18.9	34.1	37.1	18.7	23.4

Question 24: How many years have you been a service manager (including time spent at previous dealerships)?

	1990	1989	1988	1987	1986
1 to 3	24.0	26.5	24.9	20.8	19.6
4 to 7	25.0	23.5	19.7	19.4	33.3
8 to 11	17.0	23.5	22.3	26.4	17.6
12 to 15	5.7	9.8	12.4	13.9	5.8
16 to 19	10.7	5.3	8.8	8.4	9.8
20 or more	17.0	10.6	11.9	11.1	13.9

Question 25: What was your total compensation last year for being a service manager?

	1990	1989	1988	1987	1986
Less than $15,000	0.0	3.0	0.5	2.7	4.1

Salary + other	6.3	11.4	11.3	9.7	18.5

Question 27: Do you believe your salary and benefits are commensurate with your experience?

	1990	1989	1988	1987	1986
Yes	57.9	56.8	62.9	50.0	48.9
No	39.6	40.9	33.0	50.0	51.1

for the greater complexity of new cars."

South Bend, Ind.: "Less maintenance requirements are reducing profit opportunities. The general public views vehicles as maintenance-free. You must work smarter with each new-car buyer to explain preventive maintenance."

Bayonne, N.J.: "Much of our work is warranty-related. That's less profit for more work. On the other side, new cars are harder for do-it-yourselfers to work on, and we have the advantage of high-tech equipment and training."

The survey indicates an upward trend by dealership service managers in subcontracting out high-tech repair jobs to specialists. This year, 53.5 percent said they ship out various kinds of work, compared to 41.7 percent last year.

"We remove and send out clusters for repair — audio systems, clocks, etc.," said a service director in Wilmington, Del. "We don't do enough dashes to make servicing them profitable in-house."

One in Great Falls, Mont., said, "At present, we have no four-wheel alignment equipment. We also send out instrument clusters and radios. We are not equipped to repair them, nor does the factory offer training."

However, a service manager in Jacksonville, Fla., said, "All work is performed at our dealership. One of our mechanics is John Adams, Toyota's two-time national-champion master technician."

More than 40 percent of those surveyed — the same as last year — said they are having difficulties with high-tech basecoat/clearcoat paints on cars.

"I think a lot of it has to do with not getting proper training," said a service manager in Houston. "Sometimes the factory comes out with new paints and procedures, and we aren't ready for them. The colors are tough to match. That creates problems."

One in Boise, Idaho, said, "Our body-shop, personnel have all received extensive factory training. The only coatings we have trouble with are the pearl colors used by Cadillac Allante. It often takes several tries to get a good match."

According to the survey, tune-ups continue to be the most-profitable service operation. Rounding out the top five profit-makers are transmission work, brake service and repair, wheel alignment and engine overhauls.

New-car warranty work and extended service contracts continue as moderate contributors to dealership profitability, while business from general customer drive-in is declining, and income from special service packages is rising.

Of those surveyed, 64.2 percent said general customer drive-in contributes significantly to profits. That is down considerably from 77.3 percent in 1989 and 73.6 percent in 1988.

However, 45.9 percent said special service packages and promotions are significant contributors to profits. That is up from 40.2 percent last year and 38.7 percent in 1988.

Exactly 44 percent of those surveyed said their dealerships offer quick lube/oil change service, down a bit from 47.7 percent last year.

Those who do not offer this service were asked if they plan to adopt it in the near future. Only 20.8 responded affirmatively, down from 50 percent last year.

Regarding the practice of "detailing" — painstaking cleaning and polishing of vehicles, for which customers are charged upwards of $100 — 50.9 percent of service managers said they offer it. That is down from 65.9 percent last year.

Only 8.8 percent of those who do not offer the special service said they intend to do so in the near future. □

ON ICE: *National TV viewers won't see Capri spots until L-M builds supplies of in-demand ragtop*

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

To make sure their ads don't reach the market before the product is in adequate supply, Lincoln-Mercury is holding release of its national television ads for its 1991 Mercury Capri until mid-August. The car officially went on sale July 19.

While print ads debuted in national magazines last week, and movie goers will see the car when a specially made commercial breaks in movie theaters this Friday, the television ads will roll out Aug. 13.

L-M is delaying the television spots because they have only 3,000 of the Australian-made vehicles in dealer stock.

In 1985, when L-M introduced its now-defunct Merkur brand, the car was heavily advertised before it was readily available. Many dealers felt that limited availability crippled the launch and helped contribute to its demise.

Consumer interest in Capri is high and dealers have ordered 40,000 cars, said Ian McAllister, L-M general marketing manager.

"Dealers report heavy traffic as a result of (stories in) the buff books," said McAllister.

Last week, there were 3,000 Capris in dealer stock. Another 4,500 are expected to arrive by boat by the time the television ads break. McAllister said the campaign's media schedule will be stepped up considerably from that time through September.

Because the cars are in limited supply, regions where small specialty cars like Capri do well will get them first.

McAllister said dealers in the northeast will have first dibs on the cars because of that area's limited convertible-driving season. Dealers on the East and West Coasts and in the Atlanta areas will get cars soon after.

L-M is concentrating its marketing efforts on more than a dozen major cities, including Detroit, Los Angeles, Philadelphia, Dallas, Houston and New York.

The marketing campaign is aimed squarely at buyers under age 30 with an average income of $35,000, said McAllister.

The four television commercials feature a red Capri on a simple white background with animated graphics. One, entitled "Man in Box," stars a "stick man" who breaks out of his box to get behind the steering wheel of a Capri, all to music reminiscent of the 1960s. Another, "Steel Bikini," features the car on a beach blanket soaking up sunshine.

McAllister said the ads are a "very light-hearted way of presenting the product" and are designed to convey that Capri is fun to drive.

In addition to the television and print campaigns, L-M is hoping to tie in to the summer movie craze. Starting July 27, a commercial entitled "Breaking Up" will be shown in about 1,000 Screenvision Cinema movie theaters around the country.

The 60-second spot portrays a young couple ending a romantic relationship. It closes with the woman laughingly riding off in her red Capri convertible. The commercial is so low-key, it is not obvious that it is an ad until the words "Mercury Capri" appear.

The theater ads run until Aug. 23. McAllister said the ads will not appear with movies whose content is offensive to many audiences. Otherwise, L-M has no control over which movies the commercials will be paired with, he said.

He believes the theater is an "excellent place to reach the young audience" that Capri has targeted. "It provides a story that is of interest before you know it's an ad."

McAllister declined to disclose the Capri ad budget. *Advertising Age*, a sister trade publication to *Automotive News*, estimates the figure to be $20 million.

Print ads for the Capri, which officially went on sale July 19, debuted in national magazines on July 16. Lincoln-Mercury is further supporting the campaign with a specially made commercial for movie theaters as well as with billboards and brochures for dealers.

Trucks lead the way as U.S. sales rise

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Early July sales of 254,486 domestic cars and trucks rose 2.69 percent above 1989. Trucks, with an increase of 5.61 percent, accounted for most of the gain. Car sales were up 0.91 percent.

Sales of U.S.-built cars totaled 155,213, the highest for July 1-10 since 1987 when 165,910 were sold.

Trucks added 99,273 units to the early-July sales total.

The July 1-10 period had seven selling days in both 1990 and 1989.

Among the Big 3, gains by General Motors and Ford Motor Co. offset a 16.27 percent decline in Chrysler Corp. car and truck sales.

GM's car-truck sales advanced 6.73 percent in early July.

Chevrolet, Cadillac and Oldsmobile posted car gains, and Chevrolet and GMC notched truck advances. Truck sales were up18.16 percent; cars rose 0.94 percent.

Ford Motor Co.'s total vehicle sales increased 2.82 percent over the year-ago period. Light-trucks were the strong suit with a 6.09 percent increase; cars posted a gain of 0.60 percent.

Lincoln sales continued strong with an early-July increase of 29.60 percent. Mercury sales rose 4.04 percent with gains for Sable and Grand Marquis, while Ford Division slipped 3.84 percent. Escort, Mustang and Taurus sales dropped.

Big 3 combined car and truck sales of 235,940 units in the early-July period were 1.24 percent ahead of 1989.

Four of the five Japanese transplants reported year-to-year sales gains in the July 1-10 period.

Nissan reported the only loss. Its total car-truck sales were off 28.84 percent from last year.

Honda's domestic sales rose 13.50 percent above the comparable period last year, and Mitsubishi Eclipse sales were 8.24 percent above the 1989 period.

Mazda's sales nearly tripled this year, but Mazda now builds both the MX-6 and 626 in the United States. The 626 was not assembled in this country a year ago.

Toyota's domestic-car sales continue to rise. Sales of Camrys and Corollas tripled. The total was 4,930, compared to 1,694 last year.

July 1-10 brought sales of 304 U.S.-built Subaru cars and 79 U.S.-built Isuzu trucks.

So far this year, 3,721,290 U.S.-built cars have been sold, 3.15 percent or 120,942 units below 1989.

Transplants account for 14.63 percent of total car sales to date this year, up from 9.83 percent a year ago. Part of the increase is due to new lines of cars and higher production at plants that were in the startup phase a year ago.

With seven selling days in the July 1-10 period, 36,355 cars and trucks were sold per day, compared to 35,403 in the 1989 period.

Trooper, Ford van get poor marks

Head injuries 'likely' in head-on 35-mph crash, NHTSA says

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The latest government crash tests show that drivers and front-seat passengers in an Isuzu Trooper II or Ford Club Wagon van would likely sustain head injuries in a head-on collision at 35 mph.

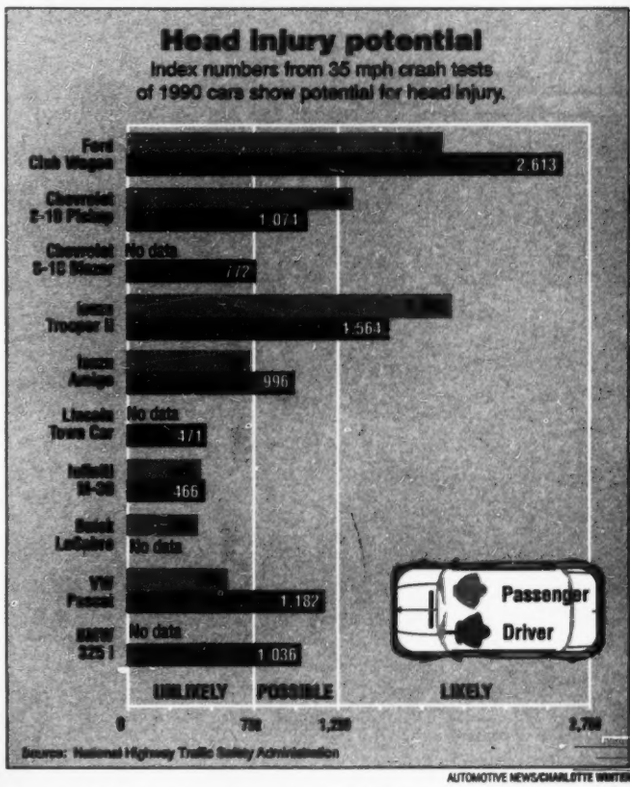
The Trooper's scores of 1,564 for the driver and 1,952 for the passenger are the highest among the four 1990 sport-utilities tested by the National Highway Traffic Safety Administration so far this year.

The latest round of results brings to 26 the number of scores released in the 1990 model year. A total of 36 vehicles will be tested in the New Car Assessment Program.

NHTSA says that a test score above 1,250 indicates head injury is likely; between 750 and 1,250, possible; and below 750, unlikely.

The test is equivalent to a head-on collision between two vehicles traveling at 35 mph.

Two other sport-utilities were tested in the latest round. The Isuzu Amigo's driver score fell in the "possible" range and its passenger score in the "unlikely" range. The Chevrolet S10 Blazer had a "possible" driver-side rating. Passenger scores were not available because of electronic problems during testing, NHTSA said.



AUTOMOTIVE NEWS/CHARLOTTE WHITE

In an earlier round, the Toyota 4Runner received a "likely" score of 1,306 for the driver side and a "possible" 1,133 score for the passenger side.

The Ford Club Wagon van had a head-injury score of 2,613 for the driver and 1,896 for the passenger — both "likely." The Club Wagon is the first 1990 van tested in the program. NHTSA says comparisons are valid only between vehicles of the same size and weight.

The Chevrolet S10 pickup was the only vehicle tested in the light-truck class. It recorded a driver-side score in the "possible" injury range and a passenger score in the "likely" range.

In the passenger-car category, the BMW 325i and Volkswagen Passat were tested as medium-weight cars. The 325 had a driver-side head-injury score of 1,036 — "possible" injury. No passenger-side score was available because the seat belt broke during testing. NHTSA said the belt was not defective.

A Passat driver would suffer "possible" head injury, and a passenger would be "unlikely" to be injured, the test showed.

Three heavy cars also were tested: Buick LeSabre, Lincoln Town Car and Infiniti M30. Head injuries were deemed "unlikely" for front-seat occupants in the Infiniti. Because of electronic problems, only one score is available for the other cars. Injuries would be "unlikely" for a Town Car driver and LeSabre passenger.

Chrysler targeted for recall

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety has asked the federal government to recall 5.5 million front-wheel-drive Chrysler cars and minivans, alleging that they fail to hold the transmission in park.

In its petition to the National Highway Traffic Safety Administration, the center said two deaths and 20 injuries have been attributed to the alleged defect. In all, the center's and NHTSA's files contain 76 complaints of transmissions jumping into gear.

The vehicles covered in the petition are:

- 1981-89 Dodge Aries and Plymouth Reliant
- 1982-87 Dodge 400 and Chrysler LeBaron
- 1983-88 Dodge 600, Plymouth Caravelle and Chrysler New Yorker
- 1984-89 Dodge Caravan and

Chrysler Corp. said the cars are not defective.

"We don't know of any problem that the center may be alleging — all they have is a couple of incidents that they believe a vehicle moved out of park," said Albert J. Slechter, Chrysler's federal government affairs director.

The center said it received several complaints this spring from Chrysler owners and decided to investigate government files. "It became apparent there was a problem," said Michael Johnson, a member of the center's vehicle safety staff.

Johnson said the problem apparently affects Chrysler vehicles based on the K-car platform, with a column-mounted transmission shift lever.

All the vehicles were available with the same engine (2.2-liter) and transmission, Johnson said.

NHTSA is reviewing the petition and will decide whether to open an

June decline pulls Europe's midyear sales below '89

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — After five years of soaring, European new-car sales are beginning to sputter.

Sales in 17 Western European countries fell 10.3 percent in June to 1,086,200 units, according to figures compiled by *Automotive News* from various industry sources. Midway through 1990, the sales pace was running behind last year's, which brought a full-year record of 13.4 million cars. Six-month sales totaled 7,210,300, down a scant 0.3 percent from 7,235,600 during the first six months of 1989.

Europe has seen monthly downturns before during its unprecedented five years of growth, but they have been isolated. Indeed, the June decline followed a 3 percent increase in May.

But a clearly slower trend has emerged. Last month's decline, for example, was felt in all major markets — West Germany, Italy, France, the United Kingdom and Spain.

For the first half, Volkswagen Group held a narrow lead over Fiat Group after being pulled down in June by the declining West German market. The group's VW, Audi and Seat brands were up 2.4 percent for the first half to 1,085,500, or 15.1 percent of the market. But in June, the VW group dipped 10.1 percent to 158,000 units.

Overall West German sales slipped 7 percent in June to 263,000, according to preliminary estimates. But volume remained 2.8 percent above last year's midyear total, at 1,573,700.

For the first half, Fiat Group's sales across Europe fell 0.2 percent below last year's to 1,081,400. That was 15 percent of the market and was within an eyelash of first-place VW.

Italy is by far Fiat's most important market. The group, including Lancia and Alfa Romeo, was hurt by the market's overall 5.7 drop to 208,800 units during June. Italy was 1.8 percent ahead of 1989 at the end of June, with 1,363,100 new-car sales.

Third-place Peugeot S.A., counting the Peugeot and Citroen brands, was down 1.4 percent from last year at 931,000 sales. It held a market share of 12.9 percent at midyear. France's other manufacturer, Renault S.A., was off 0.1 percent in the first six months to 721,400, or 10 percent of the European market.

Sales in France tumbled 9 percent in June to 148,300 units, according to preliminary estimates. But France was still running 5.4 percent ahead of last year, at 1,186,000 sales.

Europe's two American-owned manufacturers, General Motors and Ford, each fell back in June.

GM has been Europe's fastest-growing maker during the past 18 months. In June, it dropped 0.2 percent to 134,000. Still, GM posted the biggest six-month increase among the volume carmakers: a 3.1 percent rise to 859,000 units, good for 11.9 percent of the market.

Ford has been hurt by the continuing slide in its most important European market, the United Kingdom. For the first half, Ford sales declined 2.4 percent to 824,900. Its market share was 11.4 percent.

The total United Kingdom market, where Ford is the unchallenged leader with more than 25 percent of sales, tumbled 18.3 percent in June to 141,700. The downturn now taking hold throughout Europe emerged sooner in the United Kingdom, where high interest rates have dampened consumer demand. Six-month sales were down 10.9 percent at 1,065,100.

Spain, Europe's fifth-largest market, continues to lose ground after a three-year boom that began in 1986. Sales in June dropped 21 percent to 96,800 units and were off 9.9 percent in the first six months at 540,100.

Among Europe's specialist makers, Mercedes-Benz AG was 1.7 percent behind 1989 at 224,600 sales for the first half. Arch-rival BMW AG was down 7 percent at 196,700.

Japanese carmakers combined held 10.8 percent of the Western European market through June on sales of 778,700 cars, a 2.7 percent increase over the year-ago period. Nissan was tops with 199,100, a 2.8 percent share at midyear.

NEW-CAR SALES BY COUNTRY IN EUROPE

ADVICE

FROM PAGE 3

lage Cadillac in Dallas, as vice chairman for dealer relations.

"Spend $10 billion to $20 billion on a massive early retirement program for 60 to 80 percent of all middle managers.

"Cut GM's technology spending by 15 percent and double its training spending.

"Borrow one of my Pathfinders or my wife's Saab and drive it exclusively for a year to get a feel for a great, reasonably priced car."

Robert H. Waterman, Jr., author of *The Renewal Factor*, co-author of *In Search of Excellence*.

"Focus on quality. Listen to your front-line employees and customers.

"Figure out what makes your European operations work so well and import that.

"Give Americans good reasons to prefer GM cars, and I'll be the first in line."

Ann Landers, syndicated columnist

"Pray a lot. The next three years are going to be rough for the automotive industry.

"Meanwhile, go with your gut. It has served you well. Good luck!"

Yokich

Stephen Yokich, director, UAW, General Motors department

"You'll do better if you disregard a lot of what you hear from the Wall Streeters, analysts and others whose vision can't get past a quarterly statement, in favor of soliciting and acting upon the insights available from the hard-working and knowledgeable UAW members who build GM's cars."

TOYOTA

FROM PAGE 3

60,000 units, output that will probably inch higher. In California, New United Motor Manufacturing Inc., a 50-50 joint venture with General Motors, will build about 100,000 Corollas this year, up from about 80,000 last year.

● NUMMI is also expanding to build 100,000 small pickups a year. Considering the obstacles it faced to obtain local approvals for the project, further expansion looks unlikely. The company spent nearly a year satisfying strict air-quality laws — and that was simply to reactivate an unused production line, which was formerly operated by GM.

Toyota declines to speculate about what product a fourth North American plant might build.

The entry-level Tercel would seem a logical choice. In volume terms, it placed third in Toyota's lineup last year (97,577 sales), behind Camry and Corolla. Two Japanese-badged competitors, Honda Civic and Nissan Sentra, are built in the United States.

Another possibility is a full-size pickup. McCurry has been outspoken in his desire for a large, U.S.-made workhorse truck. According to the sales executive, the move would satisfy dealers who say a Toyota entry would score well against Chevrolet and Ford.

Yet another possibility for U.S. production, say company sources, is a car along the lines of the Crown, a six-passenger sedan sold in Japan.

Such a move would bear out indications of growing interest at Toyota in the family-sedan market now dominated by the Big 3.

"Our next move probably will be into the big family-car market, where we've never really been a player," confided one U.S. sales executive.

IMPORTS

FROM PAGE 6

able to compete with Japanese makes," he said. "But I'm quite concerned about the situation after the transition period. We had a period of restrictions in the United States, but they continue year after year."

Japan and the United States agreed to a cap on car imports in 1981. Today Japan unilaterally restricts car shipments to the United States to 2.3 million annually.

"So I'm very much afraid if, for instance, the French manufacturers cannot reach the (competitive) level of the Japanese, they will say, 'Please, continue this restriction for another year,' " Tsutsui said. "I don't know whether they can promise that after three years or five years the market will be completely open."

Osawa of Nissan still holds out hope for a satisfactory resolution.

"There were a lot of reports after the Luxembourg conference that the transition period should be five years," he said. "But I don't think it is definitely and officially decided."

Japanese officials in Europe argue that even in a completely unrestricted environment, they could not quickly increase market share.

"It's not easy to expand a sales network in those (now-restricted) countries," said Tsutsui. "Some dealers don't want to deal with Japanese manufacturers because the situation is still uncertain."

Osawa said it takes several years to build an efficient sales network, "so it is impossible to make a kind of avalanche of Japanese cars in Europe."

Tsutsui also argued that European companies, not the Japanese, will benefit from the opening of the Eastern European markets.

"Compared to the European manufacturers, Japan is quite behind in terms of the East Bloc countries," he said. "We have less chance and maybe no chance to step into the East Bloc countries."

SUNRAYCE

FROM PAGE 3

weather, practicality couldn't be sacrificed for the sake of good aerodynamics, low weight or high efficiency.

To compete, the rules stated that racers had to fit inside a box 19.7 feet long, 6.6 feet wide and 5.2 feet tall. Single-person racers were allowed a 13.7-foot-long solar array. Vehicles with a pilot and passenger were allowed a 19.7-foot-long array. Organizers also required that the cockpit be fully enclosed on the bottom. Seats had to have five-point safety harnesses.

While these requirements hardly affected the creativity of the students or the diversity of the finished racers, they did push designs in a sleek and lean direction.

Excellent aerodynamics were vital to success. While the best production automobiles have drag coefficients between 0.29 and 0.32, sun-powered racers knifed through the air with drag coefficients closer to 0.15. That's about the same as modern fighter aircraft.

Because the cars operate on the smallest trickle of electricity generated by an array of photovoltaic solar cells and stored in batteries to power electric motors, they had to be light. Most of the vehicles were constructed using exotic sandwiches of composite materials and aluminum sheet. Weights ranged between 440 to 750 pounds.

Power produced from the cars' silicon-disc solar panels fell somewhere between 1,000 and 2,000 watts. Experts said a typical solar panel for the vehicles cost teams about $15,000. But some schools budgeted more than $80,000 for their panels.

Most teams used light and powerful silver-zinc batteries to store panel-generated electricity. But some schools tried alternatives. The University of Ottawa used zinc-bromide batteries. And the University of Texas fielded a hydrogen battery.

Power was provided to a small, highly efficient electric motor. As many as 18 of the racers used a direct-current brushless motor built by Unique Mobility of Inglewood, Calif. That motor, which the maker claims is 96 percent efficient, weighs just 13.5 pounds and produces 20 horsepower.

Other racers fitted motors of their own design. One of these provided a peak output of just 3 hp. Although top speeds varied widely, the Pride of Maryland was clocked at better than 50 mph. (Race speed averages ranged between 15 and 30 mph.)

Transmission of the power to the drive wheel was varied. Some racers used tiny versions of continuously variable transmissions with infinite gear ratios. Others used a simple five-speed bicycle hub.

Team budgets were widely different. Highly organized schools, like the University of Michigan, solicited corporate and private sponsorship with a business team and a public relations staff. They were able to raise over $800,000 for their race effort.

Other schools with leaner budgets still managed to field respectable racers and competed strongly. The University of North Texas built its racer with $28,000.

The top three finishers won GM sponsorship to compete in the World Solar Challenge in Australia in November.

SAAB

FROM PAGE 1

zation's first major move since Swedish parent company Saab-Scania AB spun off its passenger-car operations last December to form Saab Automobile AB, a 50-50 joint venture with General Motors Europe. Sinclair said GM had "nothing to do with" the changes.

Helling returns to active duty with a new perspective on how falling sales caught Saab flat-footed after five years in which seemingly nothing could go wrong.

Saab's high-water mark was 1986, when sales reached 47,414, more than triple the 1981 total. Sinclair often recalls that sales set a record every month for 60 consecutive months.

But sales have fallen every year since then. They dropped about 18 percent to 31,576 last year. They were down another 18 percent through June to 13,249.

Saab, like other European importers, was riding high in 1986. Many of the factors that humbled other importers — such as the 1987 stock market crash — also affected Saab. But as a small company, in Sweden and in this country, Saab had less margin for error.

The value of the dollar nosedived, beginning in 1985. Saab prices increased by about half from 1986 to 1989 — despite the protests of the U.S.-based marketing team.

Saab's bread-and-butter model, the 1978-vintage 900, has grown older and older. The 9000 was introduced in 1986, but it was too mainstream for some Saab purists, yet not unusual enough to attract outsiders.

Helling, who had been executive vice president for sales and marketing, said his year as a consultant helped him realize that Saab was still trying to conduct itself like a big car company even though it didn't have the volume to support the organization.

"Our mission here is to sell Saab cars and parts and accessories and to service them," he said. "The typical experience that a growing company has, is you look at a program and you say, 'OK, all right, that looks good, let's do it,' when it doesn't really do anything to pursue your mission."

Now, Helling says he intends to eliminate everything that doesn't directly contribute to Saab's "mission."

The 37 layoffs, ranging from clerical workers to middle management, marked the second time in about a year that Saab has cut its staff through layoffs or early retirements. The two cuts reduced the U.S. work force by about 23 percent.

Saab now has 416 positions — about three-fourths of them are at headquarters and the rest in regional offices. At the end of 1982, it had 254 employees.

Helling was among those who took early retirement last year. Within a month, he was hired as a consultant.

One reason for his departure was his frustration with the Swedish parent company's remoteness t the U.S. market.

"It's not that they don't want to they just don't understand th (U.S.) market," Helling said.

He said he also left because o the uncertainty over who migh buy Saab or form a joint ventur with the company, as Genera Motors Europe eventually did wit Saab's car operation.

Helling said he decided to retur in part because he was impresse with the top management tea GM has sent to Saab Automobil AB, including James P. Crumlish the chief financial officer.

Helling said David Herman president and chief executive offi cer of the joint venture, als "knows his stuff" for the U.S. mar ket.

The Saab Car Division, whic became Saab Automobile AB, los about $344 million in 1989 afte earning a slim profit in 1988. Her man has said he expects it to mak a profit by the end of 1991.

With GM's help, Saab plans t replace the 900 and the 9000, t add a new top-of-the-line car an to add V-6 engines and four-whee drive to Saab's four-cylinder front-drive lineup.

The U.S. name change and th management changes officiall take effect Aug. 15, but Hellin and Sinclair are already takin over their new jobs.

Saab public relations, the corpo rate legal department and the par ent company liaison function wi continue to report directly to Sin clair.

All other functions — includin sales and marketing, finance an administration, human resources service and parts and accessorie — will report to Helling.

The seven executives just belo Helling also get a number of new titles and responsibilities. Among them is William S. Kelly, vice pres ident of sales, who adds nationa marketing manager to his position

Sinclair eases up after decade as Saab U.S. boss

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

ORANGE, Conn. — Robert J. Sinclair is finally taking a breather after more than 10 years of what he calls "playing piccolo in a symphony orchestra that's playing the *1812 Overture*."

That's Sinclair's typically colorful description of what it was like to be president of little Saab-Scania of America, competing against giant car companies with billions of dollars to spend on advertising and rebates.

In his new position as chairman and chief executive officer, the 58-year-old Sinclair will be picking up the conductor's baton and handing the piccolo over to Sten Helling, 52, his friend and colleague for 23 years.

Helling officially takes over Aug. 15. Yet a year ago, he thought he'd said goodbye to Saab with an early retirement.

"I could've gone fishing the rest of my life," Helling said.

But as Sinclair puts it, Helling was hired as a full-time consultant "before his seat had a chance to get cold."

Helling said he hated his time as a consultant: "You can't tell people what to do. You can only suggest, or advise or advise strongly."

Unlike his quotable boss, Helling has shied away from the press. But his tanned, deeply lined face is familiar to dealers and Saab insiders.

Felix Bosshard, president of Charles River Saab in Watertown, Mass., and chairman of the Saab Dealer Advisory Council, said Helling has a good rapport with dealers and has a workhorse reputation. Dealers will welcome Helling back, he said.

"Bob Sinclair and Sten have always made a good team," Bosshard said.

Sinclair and Helling both worked for Volvo for about 17 years.

Sinclair joined Saab in 1979, and Helling followed the next year.

A naturalized U.S. citizen, Helling is a native of Gothenburg, Sweden, the home town of Volvo. He worked for Volvo for two years in Sweden, and has been in this country since 1965.

Sinclair said last week he has no "immediate" plans to retire but his pace will probably slow down.

A motorcycle enthusiast, Sinclair also confesses to having enjoyed jumping into a fast car "and really twisting that car's tail."

> "I love fly fishing. But it takes 10 minutes to tie a fly, and I don't have 10 minutes."
> **ROBERT J. SINCLAIR**
> Saab-Scania of America

He talked last week like someone who has given retirement some thought.

"For 22 years running, I've been in charge of Swedish car sales and marketing organizations in the United States. I'm 58-plus years of age, and I'm at the point where I needed to change my *modus operandi*. I'm approaching the time when I should give up some responsibilities and operate as a CEO at the board level," he said.

There were other considerations, too.

"I spend precious little time on motorcycles," he said. "And I love fly fishing. But it takes 10 minutes to tie a fly, and I don't have 10 minutes."

CONTRACT

FROM PAGE 2

portunity to create more UAW/Ford jobs."

Bieber said that Ford's use of overtime is a "relentless effort to squeeze out costs, encouraging overtime abuses." Ford operates 13 assembly plants on overtime.

On job security, Ford's Pestillo said, "The competitive product is the only real job guarantee."

Pestillo said capital expenditures on plants has increased so much that the company may consider in the future to run its plants "all of the time." But whether or not 24-hour output is necessary today remains to be seen, he said.

Pestillo disputed the UAW's accusation that Ford is the worst offender in global outsourcing. He said Ford's outsourcing level now is about half of the value of every vehicle, or about the same as 1987.

On Friday, the talks moved to Chrysler Corp. in Highland Park, where the union said all it wanted from Chrysler was a pattern agreement with GM and Ford.

Chrysler didn't explicitly say it wanted to break the pattern, but the company did tell the union it wanted to be the strike target.

Anthony St. John, Chrysler employee relations vice president, said, "Being the target would give us a clear shot at being innovative and constructive and leaning toward Chrysler's specific needs."

Chrysler's innovative proposals to the UAW included "gain sharing," a localized form of profit sharing where individual plants are rewarded for local cost and productivity improvements; a multi-employer health care trust to lower health care costs; employee ownership of the company and more flexible work rules.

St. John said Chrysler's employment costs are currently $36 an hour, $3-$6 an hour more than GM and Ford, and some $6-$12 more an hour than the transplants.

Earlier in the week, Robert Lutz, Chrysler Motors president, said Chrysler needs to chart its own path with the UAW to raise its competitiveness. Lutz cited Chrysler's higher ratio of retirees to active employees and the strength of imports and transplants as reasons for avoiding the traditional pattern pact under which the major terms for the Big 3 are virtually identical.

"Any company owes it to itself and its employees both unionized and non-unionized to see if there aren't some trade-offs that we could negotiate that fit our unique situation better," Lutz said.

Bieber said the transplants will have no impact on what the union asks from the Big 3.

The UAW will negotiate concurrently with the Big 3 until about Labor Day when the union's executive board will select a strike target. After that, negotiations at the target company will dominate as both sides attempt to reach agreement before midnight on Sept. 14.

FORD

FROM PAGE 1

$630 or 4.19 percent.

On light trucks, the 1991 hikes include 2.52 percent on the Explorer two-door XL with two-wheel drive and 8.82 percent on the Aerostar wagon regular-length XL with 2wd. Ford increased the price of its base F-series pickup $634 or 5.59 percent to $11,967.

Ford added $1,016 or 8.0 percent to the base sedan in its popular Taurus line. Ford plans to add an electronically controlled automatic transmission and a sequential multi-port electronic fuel-injected V-6 to the 1991 Taurus and its sister car, the Mercury Sable, according to early fleet buyers' guides.

Ford raised the base price about 3 percent on the Crown Victoria, though a restyled model will be introduced early in the 1991 calendar year. The base price of the Crown Victoria standard sedan went up $555. It was the third price hike since Ford Motor labeled the Crown Victoria and Mercury Grand Marquis 1991 models in April. The three hikes total $969 for Crown Victoria and $957 for Grand Marquis.

The 1991 Mercury prices show increases averaging $364 for Tracer, $383 for Topaz and $695 for Sable. For Lincoln, the averages are $606 for Town Car, $843 for Continental and $1,320 for Mark VII.

AMERICA

FROM PAGE 1

base of $8,899; 1990 Honda Civic DX, $9,440; and 1990 Geo Prizm, $10,125. The 1991 Ford Escort's base price is $7,924. None of the models are equipped with air bags.

In May 1986, Chrysler created the America model marketing strategy by cutting the price of the Omni/Horizon subcompacts $710, increasing the standard equipment level, and offering the models with only two equipment packages and three free-standing options. Chrysler's share of the subcompact segment rose 3.2 percentage points by the end of December that year.

Buoyed by that success, in August 1987 the company announced Plymouth Reliant and Dodge Aries America models. Prices were cut $1,300 and only two option packages and 12 individual options were offered.

"We have used America successfully before and it has an identity in the market," said a company marketing source.

Dealers support Chrysler's revival of the America name and marketing strategy.

"I think the P-car America will be every bit as popular as the L-body America," Tomkinson said.

Last week, Chrysler said that due to increased dealer orders, it will hike daily production by 17 percent beginning today at its Sterling Heights, Mich., assembly plant. The plant builds P-cars.

In December 1989 Chrysler said it would offer so-called "P-minus" versions of the Shadow and Sundance. The company described the models as a lighter, content-reduced version of the car.

The P-minus cars were planned as 1991 models to be launched in spring 1990. That launch was delayed because the company opted to continue selling the P-car with customer rebates throughout the summer.

Last week, Chrysler Motors President Robert Lutz said the company expects increased P-car sales to help stem Chrysler's market share decline.

Chrysler's share of the U.S. car market dropped from 10.65 percent in the first six months of 1989 to 9.00 percent in the first six months of 1990, in part because of the discontinuance of the Omni/Horizon.

"I think you are going to see some action on our part at the low end of the market, which will definitely put us fully into the running against all domestic and imported small cars," Lutz said.

Jeep-Eagle minivan, Dakota plea reviewed

Chrysler Motors President Robert Lutz said the automaker is considering a plan that would allow Jeep-Eagle dealers to sell a version of the company's minivans. The Jeep-Eagle National Dealer Council has asked for a minivan by Jan. 1, 1991.

Lutz said Chrysler is particularly reviewing the dealers' argument that Jeep-Eagle needs a minivan because minivans are available in a range of competitive import and domestic franchises.

The request has raised the ire of the Chrysler-Plymouth and Dodge dealer networks.

Lutz also said the company is considering the request of Jeep-Eagle dealers to kill the Jeep Comanche and replace it with a version of the Dodge Dakota pickup by the spring of 1991.

But Chrysler has ruled out giving Jeep-Eagle a version of the A-body Dodge Spirit/Plymouth Acclaim/Chrysler LeBaron.

The Jeep-Eagle council had asked for an A-body model to boost the franchise's car lineup.

"Even now in this weak market we're having a worry that we can't produce enough Spirits and Acclaims," Lutz said.

Import sales tumble 9% in first half

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Sales of imported cars declined 10.48 percent in June and 9.33 percent in the first-half of 1990. This year's first-half total was 1,274,613.

The Honda Accord was the best-selling imported model for the month and for the half. Combined sales of U.S.-built and imported Accords make it the nation's best-selling nameplate so far this year.

Japanese imports were down 8.74 percent for June and 5.22 percent for the first half, to 904,410. Increased production at Japanese plants in North America more than made up for those declines.

European imports dipped 9.79 percent in June and 13.26 percent to 251,447 for the first half.

Among the Japanese Big 3 — Toyota, Honda and Nissan — only Honda's import sales improved for the first half. They were helped by a 12.38 percent increase for Accord. In June, Honda's import sales rose 72.83 percent over June 1989.

In the first half, import sales fell — in most cases dramatically — for the other lines in the 50,000-plus volume league at midyear 1989: Hyundai Excel, Nissan Sentra and Maxima, Toyota Corolla and Toyota Camry. All but Excel and Maxima are also produced in the United States.

Nissan's import sales were down 32.21 percent for the month and 20.48 percent for the half. All Nissan import lines except Stanza declined for both periods.

Toyota imports were off 37.90 percent for the month and 17.63 percent for the half. Strong increases were shown by two restyled lines, the Celica and MR2.

Among the Big 3's captive imports, sales of Chevrolet's Geo increased 22.64 percent for June and 39.42 percent for the half.

FRANCHISE

FROM PAGE 1

gets and customer satisfaction performance levels for a dealer, rules for buying and selling the dealership, successor clauses governing transferring a dealership to a family member and detailed requirements for equipment and employee training.

GM officials will begin holding zone meetings today with dealers to explain the agreement.

Each dealer must sign the agreement to continue the franchise. The dealer meetings will continue through early September.

The GM franchise agreement, except for a provision being taken out or added every five years, has remained basically the same since 1956. That year brought a major revision of dealer franchises in the domestic auto industry.

The 1956 changes followed a late-1955 Senate hearing in which a number of GM dealers — both active dealers and those whose franchises had been terminated — trooped to the witness stand to excoriate GM for its treatment of its retailers. The franchise improvements followed, and 1956 came to be known as "be nice to dealers year."

In addition to the more liberal selling agreements, 1956 saw the passage of the Automobile Dealers Franchise Act, better known as the good-faith law, or the dealer day-in-court law.

This year, in a radical departure from the past, each GM division will have a unique section of the agreement. Each division, with a dealer committee, wrote a portion of the agreement that applied to that division.

"Each division is getting its own personality and its own place in the market, so the agreement needs to be different," said Robert H. Ogden, general director of sales operations and dealer relations for GM.

Arbitration to differ among GM divisions

Under the 1990 franchise agreement, General Motors' five car divisions and GMC will use variations of binding or non-binding arbitration to settle disputes between dealers and the divisions.

- At Chevrolet, Pontiac, Oldsmobile and GMC, a dealer may choose to go before a binding arbitration panel; the alternative is a lawsuit.
- The Buick agreement requires a dealer to go before an arbitration panel, but the decision binds neither the dealer nor the company. After exhausting the arbitration process, either side can sue.
- The Cadillac agreement also requires a dealer in a dispute to go before an arbitration panel. The decision of the panel is binding on the division but not on the dealer; the dealer can sue if the decision is unfavorable.
- The Saturn franchise agreement is separate from the overall GM agreement and includes mandatory binding arbitration, which keeps all disputes out of the courts. Mandatory binding arbitration is controversial and unpopular with many dealers, who want to be able to sue, and has been opposed by the National Automobile Dealers Association.

The dispute resolution process was revamped in an effort to provide quick and economical solutions that could avoid lawsuits. Each division selected its own approach.

Under the 1985 agreement, GM has used voluntary arbitration with a GM-hired retired judge as a third-party mediator. A disinterested dealer helped select the judge. The judge's decision was binding on the division, but not on the dealer, who could still sue.

Claude "Bud" Moore, GM vice president of customer sales and service, said dealers often avoided voluntary arbitration because they felt the deck was stacked against them since GM paid the judge.

Dealer-factory disputes commonly arise when:

- The factory wants to appoint another dealer in the vincinity of an existing dealership.
- The automaker pulls a dealer's franchise for not meeting sales or customer satisfaction targets.

Under the 1990 agreement, each division will use an arbitration panel made up of dealers and division representatives. Some divisions also will include an impartial third party. (See accompanying story for details of divisional procedures.)

Also under the new agreement, each division will formalize dealer groups to advise on product, business and marketing decisions as well as on standards for dealership image, design, equipment and training. Some divisions already have committees to advise them on some of those issues.

The committees will be distinct from the existing elected dealer councils.

"The agreement doesn't do anything that will make a dealer more profitable tomorrow morning," Green said. "But in the long term, dealers will have a say in decisions that affect them and their profitability."

Green said NADA is surveying manufacturers to measure dealer profitability.

So far, he said, the survey suggests that about 30 percent of the nation's approximately 25,000 dealers are in the red. In the first five months of this year, 71.2 percent of GM dealers were profitable, up from 63.1 percent in the same period a year ago.

GM divisions developed the 1990 agreement over 18 months with dealer councils and dealer committees established specifically to work on the franchise.

"This is the first time I remember that dealers have had a chance to offer input into the agreement. It's a refreshing change," said Glen Ritchey, president of John Hall Chevrolet-Geo in Daytona Beach, Fla. Ritchey worked on the Chevrolet agreement.

Larry Brostoff, owner of Larry Buick in Long Island City, N.Y., was one of 10 dealers who served on a committee with five Buick officials to work on the Buick portion of the contract.

"We got a consensus on various items," Brostoff said. "In looking at the agreement, most of the points we (dealers) wanted seem to be in there."

Note: Some makers offer rebates in dealers on sales of 1989 and 1990 models. Most of these programs are

POWER

FROM PAGE 2

"We're trying to cover real costs. A study like the Customer Satisfaction Index costs $400,000 to $500,000."

But some don't think the fees are justified.

An automotive ad director said it appears the fees are out of line with Power's actual costs. "We are already paying for the research itself" separately, he said.

A marketer that wants to cite a Power survey in advertising is required to have subscribed to the survey for the past two years and must commit to buying the survey the following year. The subscription fee is based on a company's size and the number of models it markets, Ferron said.

A large multibrand marketer would pay in "six figures" for a study such as the 300-plus-page report accompanying the Customer Satisfaction Index, Ferron said. He said some companies negotiate a single price to buy all the syndicated studies.

Another agency executive said Power is risking the good will of the auto companies that subscribe to the syndicated research and also hire the consultancy for proprietary research.

"(J.D.) Power is accelerating the demise of his company by abusing the company's customers with too many studies and too many fee charges," he said.

Power already runs four annual car surveys. Besides the Consumer Satisfaction Index and the Initial Quality Survey, the consultancy does the Vehicle Reliability Index after they've owned their vehicles five years, and the Sales Satisfaction Index, based on consumer satisfaction with dealers.

Power also has a separate Initial Quality Survey on trucks and is considering a fifth survey involving car owners after three years of ownership.

Marketers are allowed to advertise a first-place overall finish and a best finish in any category.

So, when the Initial Quality Survey was released, Toyota Motor Sales U.S.A.'s Lexus Division rushed to advertise its first-place brand finish, and Buick soon broke a campaign about being the top domestic brand.

Mazda Motor of America is touting its Miata, its compact pickups and MPV minivan as the most trouble-free vehicles in their classes. Similarly, Chevrolet broke a print ad this month touting its Lumina coupe as "the most trouble-free car in its class." In small print, the class is revealed to be the "mid-size specialty segment."

"I was shocked when I saw that Chevrolet ad," said Automotive Marketing Consultants' Wangers. He noted that Lumina didn't finish in the survey's Top 10 models overall. The ad, he said, was an example of the sort of clutter that diminishes the impact of other ad claims citing Power surveys.

Peter Levin, director of advertising at Cadillac, said consumers interviewed in focus groups are generally aware of the Power name, "but there is some confusion about the various studies."

Cadillac nevertheless will incorporate the Power survey in its sales incentive campaign in August. "If we earn it and don't use it in advertising, it's possible people will think we didn't earn it," he said.

Not all research organizations allow their surveys to be used for promotion. Mitsubishi was refused permission by Maritz Marketing Research to tout the high finish of the Mitsubishi Galant in a recent survey, said Frances Oda, director of national advertising for Mitsubishi Motor Sales of America.

Maritz has held to its policy since beginning its syndicated research in the late 1960s, said Paul Arndt, vice president of research services. Because the auto marketers are footing the bill for the research, "it would be like asking them to pay for their own executioners if their competitors end up using the results as a club against them," he said.

Marketers that cite Power surveys generally support efforts to restrict ad claims.

"If something is worth winning, we don't want it to get diluted," said Jay Qualman Jr., Buick's general director of advertising.

"I'm pleased they're making an attempt to police" ad claims, said Craig Mathiesen, president of Ketchum Advertising in Los Angeles. The office's main client, American Honda Motor Co.'s Acura Division, has used its top ranking in Power's Customer Satisfaction Index for several years.

"If they didn't police the ads, there would be spurious manipu-

Ford's return hikes car, truck build

By Anne Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Car and truck outout rose last week as Ford Motor Co. resumed production following a two-week vacation.

Last week's scheduled car ouput of 89,852 units was 26.50 percent above the prior week and 8.20 percent ahead of the year-ago total.

So far this year, 3,435,325 cars have been assembled, 14.29 percent below last year.

Truck production was scheduled at 74,147, 76.40 percent above the prior week and 0.91 percent ahead of the year-ago figure.

Year-to-date, truckmakers have assembled 2,253,942 units, 7.60 percent below the 1989 total.

Last week's estimated production was split as follows: General Motors, 39.93 percent; Ford Motor Co., 34.03 percent; Honda of America Manufacturing Inc., 9.99 percent; New United Motor Manufacturing Inc., 4.56 percent; Mazda Motor Manufacturing (USA) Corp., 4.46 percent; Diamond-Star Motors Corp., 3.21 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.21 percent; and Subaru-Isuzu Automotive Inc., 0.61 percent.

Ford resumed production last week at all but one assembly plant following a two-week vacation. The Dearborn, Mich., plant (Mustang) is scheduled to resume production today.

Ford slated daily overtime last week at the Wixom, Mich., and Wayne, Mich., car assembly plants and at all truck facilities except Lorain, Ohio, and Michigan Truck (Wayne, Mich.).

GM's Detroit-Hamtramck; Lansing, Mich. (Plant B); Lordstown, Ohio; and Orion Township, Mich., car plants were down last week for model changeover.

The company's Flint, Mich.; Lansing (Plant A and Reatta Craft Centre); and Wentzville, Mo., car plants shut down today for model changeover. The Janesville, Wis., car assembly plant completed model changeover this past weekend with no downtime.

Chrysler's Newark, Del., and Sterling Heights, Mich., car production facilities reopen today. One shift at the St. Louis No. 1 plant returns today following a two-week shutdown for retooling. Some 1,800 workers on the second shift remain on layoff.

Nissan's plant in Smyrna, Tenn., is slated to reopen today following a two-week vacation.

Canadian output trails prior week

Canadian auto output was targeted at 16,214 last week, 12.27 percent below the prior week and 33.99 percent above last year.

Scheduled truck production was 7,055, 14.33 percent below the previous week and 29.09 percent above the year-ago week.

General Motors' Oshawa, Ontario, plant was scheduled to work Saturday overtime last week.

Hyundai's plant in Bromont, Quebec, goes down today for a two-week vacation. The plant is expected to reopen Aug. 6.

AUTOMOTIVE NEWS/JOE WILSSENS

Dealer Al Serra lays the cornerstone at Saturn North, a 14,000-square-foot facility in Clarkston, Mich. More than $2 million is being invested in the 14-acre site and building. Also pictured are Michigan Secretary of State Richard Austin, center, and Don Hudler, Saturn vice president.

Saturn's dealers risk heavenly sums to sell new GM car

By Greg Bowens
SPECIAL CORRESPONDENT

John B.T. Campbell III likes to be first.

The president and chief executive officer of Campbell Automotive Group, which has eight dealerships and 12 franchises in California, was one of the first to put in an 800 telephone number for service customers. His was the first U.S. dealership group to go public, selling half the company to British investors to raise capital for expansion.

Now, he is among the first 104 men and women to gamble on a new car line without a reputation, built by a domestic company without a recognized name — Saturn.

Campbell's group is investing $4.9 million in two new dealership facilities for the new General Motors car and is fighting high overhead costs to achieve its goal: To be one of the first to dig into a possible gold mine.

"But even *our* resources are not endless," he said.

Dealers are spending $2 million to $4 million on new Saturn dealerships. Individual dealership rent factors average $23,100 a month, according to an *Automotive News* survey of 19 Saturn dealerships. That is twice the national average. Yet, Saturn dealers believe they will be profitable the first year.

"We think it's possible to be profitable out of the chute," said Campbell.

He bases his faith on Saturn Corp.'s controlled market approach that gives a dealer a monopoly in a market area.

He said that because of the large areas around Anaheim and Whit-

Smith drives Job. 1 today

By Phil Frame
and Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors Chairman Roger B. Smith was to fulfill a goal today by driving the first production Saturn car off the assembly line in Spring Hill, Tenn.

The timing of the birth of the second car remains a mystery.

In a private ceremony, Smith was scheduled to drive Job One off the line at about 11 a.m., said Saturn spokesman Mark Tanner.

The Colt, a little car, is embroiled in a big argument at Chrysler.

Jeep-Eagle may get Colt; C-P, Dodge deals will fight

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Bowing to pressure from Jeep-Eagle dealers hungry for an entry-level vehicle, Chrysler Corp. is poised to add the Mitsubishi-built Colt subcompact to the franchise's 1991 lineup.

The move is being fought by Chrysler-Plymouth and Dodge dealers who now sell the three-door hatchback imported from Japan.

In another indication of fluctuating Jeep-Eagle product plans, Chrysler last week said the franchise will not sell a version of the Hyundai Sonata compact. Chrysler and the South Korean automaker announced in February 1989 that Chrysler would buy 30,000 units annually of a version of the Sonata built at Hyundai's plant in Bromont, Quebec.

Jeep-Eagle dealers were to begin selling that vehicle in 1991.

A Chrysler statement blamed the demise of the venture on "changing U.S. market conditions." Chrysler

Olds dealers pull Japan-bashing ad; others draw fire

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A New York-area Oldsmobile dealer group has stopped running a television ad that literally belittled the Japanese.

The ad suggested that Americans should buy American cars, since they're built "for our size families, not theirs," while Japanese cars are built for short people.

Pontiac, Buick add new ad fee, Page 3

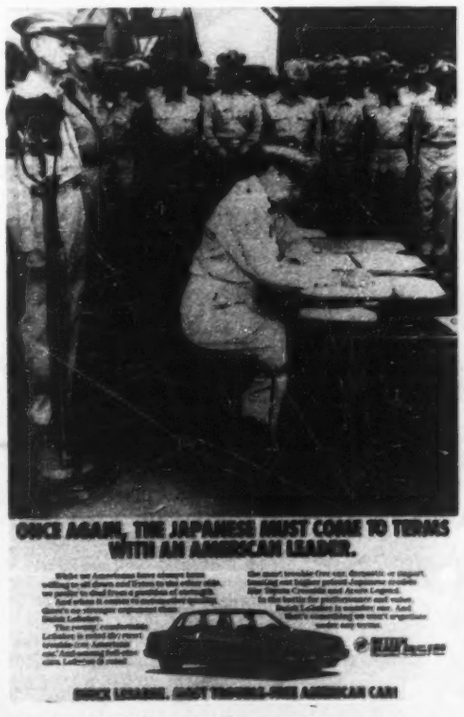
Ross Ruehle, an Oldsmobile spokesman, said the ad had been pulled. Carol Bensky, a spokeswoman for the 115-dealer Good Olds Guys ad group, said only that the ads had run as planned in May and would not be renewed.

The Oldsmobile ad was one of several strongly anti-Japanese car ads that have surfaced this year.

An 85-dealer Pontiac ad group kicked off a controversy here with a television ad that refers to New York City's Rockefeller Center as "Hirohito Center," a sarcastic reference to the late Japanese emperor and the fact that the Tokyo-based Mitsubishi Estate Co. bought a controlling interest in the New York City landmark last fall.

The New York Times ran a front-page story July 11 featuring Japan-bashing car ads, followed by an editorial calling the approach "racism."

see JAPAN ADS, page 43



A newspaper ad from the Chicago-area Better Buick Dealers group last spring shows a picture of U.S. Gen. Douglas MacArthur signing the Japanese surrender documents ending World War II.

Pontiac, Buick dealers pay ad fees

By Arlene Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Starting Wednesday, Aug. 1, Buick and Pontiac dealers will be assessed 1 percent of the invoice price of vehicles to pay for local advertising.

Buick and Pontiac are joining Chevrolet and GMC Truck, which adopted the fee in 1988, and Oldsmobile and Cadillac, which imposed the fee a year later.

Olds dealers pull ad, Page 1

While dealer reaction was mixed, many dealers have accepted the fee as a necessary evil of doing business.

"It's almost like they've beat us down," says a metropolitan Detroit dealer who did not want to be identified. Dealers say Buick and Pontiac notified them of the change in June.

LET'S MAKE A DEAL

Negotiator clears cultural, clerical hurdles to cement GM parts pact with Soviets

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FLINT, Mich. — Negotiations had gone on for hours. Suddenly, they screeched to a halt.

Negotiators for the Soviet Union's leading auto manufacturer, Volga Auto Works, didn't understand what their counterparts from General Motors meant by "in good faith."

Translators for both sides were stumped. There is no Russian word for faith.

"We went around for hours on the word faith," recalls Jerry D. Florence, director of marketing strategy for AC Rochester Division and GM's lead negotiator in talks with the Soviets. "We finally came up with 'good intentions.' "

Language was one of the most frustrating aspects of GM's deal with the Soviets.

"The most difficult part was that a lot of times philosophically we would be saying the same thing, but we couldn't find the words that matched," says Florence.

Ultimately, GM and the Soviets emerged with a $1 billion deal that represents some firsts. GM became the first U.S. automaker in modern history to establish a working relationship with a Soviet automaker. GM also will become the first U.S. company doing business in the Soviet Union to be paid in U.S. dollars instead of Russian rubles, which are tradeable only in the Soviet Union.

Under the five-year agreement, GM will sell 150,000 engine management systems a year to Volga Auto Works for Lada automobiles. GM will engineer the systems to fit Lada's 1.5- and 1.7-liter, four-cylinder engines. GM also will train Soviet workers to install them.

In addition, GM and Volga Auto Works will negotiate toward a second deal to manufacture catalytic converters jointly in the Soviet Union. Those negotiations also involve GM's access to the Soviet Union's supply of platinum, which is used in making catalytic converters.

The deal turned out to be the most complicated of 41-year-old Florence's seven years of deal-making for GM.

While at GM's Packard Electric Division, Florence negotiated a deal for Packard Electric to set up a division in Brazil to supply parts to GM do Brasil's auto manufacturing.

In 1987, he negotiated with Japanese automaker Suzuki Motor Co. Ltd. for the the first major component contract for CAMI Automotive Inc., GM's joint-venture plant with Suzuki in Ingersoll, Ontario.

And at Packard Electric, he had responsibility for the division's joint-venture operation in South Korea to supply Daewoo Motor Co. Ltd.

But the deal with the Soviets was different.

"It was a lot more comprehensive, and we scaled new ground," says Florence.

As new ground was broken, Florence says he was reminded of a remark by H. Ross Perot, founder of Electronic Data Systems Corp. Perot, while a member of GM's board, criticized the company, saying that bringing about change at GM was like teaching an elephant to tap dance.

"In this case," says Florence, "the elephant did tap dance — and boogaloo and a little bit of everything else."

Laforza production stalls as company seeks more cash

Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Laforza Automobiles Inc. has ceased production of its $43,850 sport-utility, and Chairman Joseph Monterosso says he'll know this week if production will resume.

Laforza and C&C Inc. of Brighton, Mich., which puts Ford engines and transmissions into the Italian-built vehicles, agreed to stop producing the vehicles three months ago. While production has been on hold, Monterosso has continued efforts to secure financing and to reorganize the financially strapped company.

Monterosso says his company will receive $2 million to $3 million from sources he would not name if he can successfully renegotiate arrangements with his bank and major supplier.

Monterosso says he is "extremely optimistic" that the deal will pull through. Another source close to the company said the odds were 50-50.

The Laforza sport-utility was designed by Carrozzeria Pininfarina in Turin, Italy. Bodies built in Italy were sent to Brighton, Mich., where C&C Inc. installed Ford Motor Co.'s 5.0-liter V-8 engine and four-speed automatic transmission. Laforza Automobiles is based in Hayward, Calif., and has just moved to smaller quarters in an effort to control costs.

Laforza has 40 dealers, primarily exotic- and specialty-car dealers.

Plagued with lack of funds from its start in 1988, Laforza has barely scratched the surface of its sales projections. In late 1988, when Laforza was preparing to introduce the vehicle, it was projecting 2,000 sales in the first 12 months. The figure was revised downward a number of times as the launch date was moved from November 1988 to March 1989.

The vehicle was first shown at the Greater Los Angeles Auto Show in January 1989 and introduced last July. Fewer than 300 have been sold.

Hundreds remain unsold. Some are in dealer inventories; most are parked at C&C, which delivers the vehicles directly to dealers.

Pininfarina is still dealing with Laforza, although the Italian

Mercedes shifts execs, redraws zone boundaries

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

MONTVALE, N.J. — Mercedes-Benz of North America Inc. is shifting manpower and authority from its national headquarters here to four zone offices in an effort to become more responsive to its 422 dealers.

By the end of 1990, the company will consolidate its seven existing zones into four new ones with more people and more decision-making power. The restructuring closely parallels a move made recently by rival BMW of North America Inc., based a few miles away in Woodcliff Lake.

Mid-July sales slide; Big 3 off 13% to 18%

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Sales of transplant vehicles continue to eat away at the popularity of Big 3 models.

For the July 11-20 period, all transplant makers except Nissan sold more vehicles than the year before; General Motors, Ford Motor Co. and Chrysler Corp. were down.

Mid-July car sales totaled 190,503, a decline of 12.87 percent from last year.

Truck sales, which totaled 119,162, were off 12.57 percent; total vehicle sales of 309,665 were down 12.76 percent.

Each selling period had nine days. The daily selling rate was 34,407, compared with 39,649 last year.

Ford suffered the biggest decline in car sales — 23.56 percent.

Combined with a 10.45 percent loss in truck sales, Ford's overall sales were down 18.02 percent.

Chrysler's vehicle sales were down 17.24 percent. The company's car sales skidded 17.88 percent and truck sales fell 16.73 percent.

GM suffered least among the Big 3 with a 13.31 percent overall decline in vehicle sales.

The automaker's sales declined 13.36 percent, and truck sales were off 13.22 percent.

Mazda and Toyota led the way for the transplants.

Mazda's sales soared 70.61 percent with Toyota close behind with a 62.65 percent increase.

Mitsubishi and Honda had modest increases of 6.55 percent and 3.17 percent, respectively.

Nissan's overall sales dropped 0.96 percent with car sales down 1.52 percent and truck sales off 0.51 percent.

G20 joins 1991 Infiniti car line

Kristine Stivin Breese
AUTOMOTIVE NEWS STAFF REPORTER

A new entry-level sedan, a mid-range convertible and performance modifications on existing models constitute the 1991 changes for Infiniti Division of Nissan Motor Corp. in U.S.A.

INTRO 1991

At under $20,000, the new 2.0-liter G20 sedan will give Infiniti dealers a product to show to luxury-car aspirants, including younger buyers and women with less disposable income. The G20 goes on sale Sept. 25.

Although the exterior styling of the top-of-the-line Q45 is unchanged for 1991, two new options will be available — full-active suspension and traction-control.

An M30 convertible will join the sedan in Infiniti's middle line.

G20: The G20 is powered by a 2.0-liter, 16-valve, four-cylinder engine delivering 140 horsepower at 6,400 rpm, and 132 pounds-feet of torque at 4,800 rpm.

The car is offered with either five-speed or automatic transmission; anti-lock brakes are standard. A driver-side air bag is not available.

Q45: The Q45 sedan offers what Infiniti calls the first full-active suspension system available on a production automobile in the United States.

The option, which will cost more than $4,000, uses sensors and hydraulic actuators to control body roll, pitch, brake dive and other handling characteristics.

Electronic traction-control is another Q45 option. The computer system marries electronic throttle control with electronic braking control to moderate wheel spin and grip. The $1,500 traction-control option and the active-suspension system are not available together.

The Q45 transmission has been recalibrated and the central door-locking system has been improved.

M30: The M30 will continue as is, except for new Q45-like scripting on the instrument panel, minor fuel-injection refinements and central door-lock control added to the passenger-side door.

The convertible model is scheduled to go on sale in November. Price is estimated at $30,000-plus.

NHTSA upgrades probe of 1989-90 T-bird latches

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The federal government has upgraded its defect investigation into 1989-90 Ford Thunderbird and Mercury Cougar hoods that fly up when the cars are moving.

Both hood latches on the cars appear to fail, said the National Highway Traffic Safety Administration. About 22,500 vehicles could be affected by a recall.

NHTSA also upgraded to engineering analysis its investigation into failing lap seat belt retractors on the 1985-87 Chevrolet Corvette. A recall could affect 100,000 cars.

NHTSA opened several preliminary defect investigations:

- 1986-90 Isuzu Trooper, 3,000 vehicles, for surging diesel engines possibly caused by oil that leaks through the turbocharger oil seal. The oil possibly enters the cylinder and is burned with the diesel fuel. Three complaints.
- 1988-90 Oldsmobile Cutlass Supreme, Buick Regal and Chevrolet Lumina, 763,000 cars, for a faulty switch on the rear brake stop lamps and failure of the cruise control to disengage when the brakes are applied; 12 complaints.
- 1984-85 Ford Mustang, 274,000 cars, for a deteriorating plastic seat belt buckle; 13 complaints.

Mazda recalls 1986-87 626s

IRVINE, Calif. — Mazda Motor of America is recalling 1986 and 1987 Mazda 626 models to check for possible faults in the ignition switch.

Worn-out switches could prevent the windshield wipers and washers, engine cooling fan, heater blower and air conditioner compressor from operating.

Approximately 102,500 vehicles could be affected.

Conn. requires makers to reveal warranty extension

HARTFORD, Conn. — Connecticut Gov. William A. O'Neill has signed into law a bill requiring motor vehicle manufacturers to notify customers within 90 days of instituting a program that expands or extends a consumer warranty or program that offers to pay all or part of the cost of a repair.

The law takes effect Oct. 1.

Ford wants conversions stressed

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is urging its dealers to become "substantially more active" in retailing conversion vans as part of the changes it is making in its consignment pool van conversion program.

Phillip M. Novell, Ford Division general sales manager, in a July 18 letter to dealers, said Ford's move toward distributing more of its van conversion chassis through pool companies is dependent on its dealers becoming more active in conversion van retailing.

"It's important to remember that because our customer cash and APR (annual percentage rate finance) incentives are available only through Ford dealers (on both pool and non-pool units), remaining non-Ford-dealer retailers of Ford van conversions will have a more difficult time competing effectively," Novell said.

He added that Ford's quality improvement assistance to pool converters "appears to be producing excellent results. Dealers who got out of conversion van retailing in the past due to quality concerns may be pleasantly surprised with today's Ford conversions."

Novell

Novell also pointed out that the most profitable way to retail van conversions is to make a serious commitment to the business.

"Conversions are sold predominantly from stock and are often impulse purchases," Novell said. "Dealers stocking only one or two units normally don't have 'the' vehicle that the customer falls in love with — and they usually can't justify sufficient merchandising and service support.

"So, if you're considering this business, 'go for it.' It can be a major profit contributor to your bottom line."

Novell also noted that Ford converters have responded favorably to a customer survey

"Major quality improvement actions are now under way (as a result of the survey)," Novell said.

Ford engineers have also begun regular visits to pool and pool-applicant converter locations to assess their quality practices.

Converters must demonstrate acceptable and continually improving quality practices to attain or retain pool status, Novell said.

Van conversions mark record May

A big jump in wholesale shipments of van conversions helped the RV industry register an overall increase in shipments during May.

Van conversion shipments set a monthly record in May, according to the Recreation Vehicle Industry Association. Shipments from converters to dealers totaled 20,900 units, up 11.76 percent from a year earlier, RVIA said. For five months of calendar 1990, van conversion shipments totaled 83,500 units, 4.57 percent below a year ago.

But shipments of raw van chassis from Detroit's four van manufacturers to converters in May portended a continued strengthening in the market. Detroit van manufacturers shipped 21,700 van chassis with the seat-delete option to converters in May, nearly equal to the 21,800 of last year.

May's shipments of raw chassis, though off 0.46 percent from last year, represented a sharp improvement over the industry's pace earlier this year. Raw chassis shipments were down 7.40 percent in April and 79.40 percent in January, according to RVIA.

For five months of calender 1990, raw chassis shipments totaled 81,500 units, down 20.02 percent from a year earlier.

The strength of wholesale van conversion shipments from converters to dealers helped boost total shipments of RV products to 38,200 units in May, up 4.95 percent from a year earlier. For five months of calender 1990, total RV shipments of 174,100 units were 4.34 percent below the 1989 figure.

RVIA said consumers reported slightly less favorable attitudes about the long-term outlook for the general economy in its most recent survey, conducted by the University of Michigan's Survey Research Center. The Index of Consumer Sentiment slipped to 90.6 in the May survey, down slightly from April and nearly identical to the 90.7 recorded one year earlier, RVIA said.

John DeWolf, an economic consultant for RVIA, forecast van conversion shipments of just under 190,000 for calendar 1990, a 5.19 percent decline from 1989.

Starcraft shoots for big profits

2 presidents get pink slipped in corporation's restructuring

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Starcraft Corp. is shifting gears to become more profitable, following the ouster of two longtime officials.

Dominic D. Cuzzocrea, president and chief executive officer of Starcraft, and Cecil J. Bontreger, president of Starcraft Van Conversions Corp., were "relieved of their duties," July 16, according to Michael Bell, Starcraft board chairman.

A search is under way to replace Cuzzocrea. During the interim, Richard A. Newberry, Starcraft chief financial officer, was named acting chief operating officer. Joe Hartsough, general manager of Starcraft's Delhi, La., plant, was named to replace Bontreger as president of Starcraft Van Conversions.

Cuzzocrea and Bontreger helped engineer a buyout of Starcraft from Lear Siegler Corp. in June 1987 — but recently left it without enough money to service its interest debt.

Bell, whose Southwest Venture Management Co. in San Antonio, Texas, is the largest single investor in Starcraft with about 25 percent, stepped in and took over as chairman earlier this month.

Bell confirmed that Starcraft, which owes $8.5 million in revolving and short term outstanding bank debt, as well as $25 million in debentures remaining from its buyout, failed to earn enough to service its interest payment for its most recent fiscal 1990 year ended June 30.

Starcraft's annual interest burden is about $5.5 million, he added.

He said the company has been renegotiating its loan payment schedule with banks, and would meet with bondholders to renegotiate payment on that interest debt within two weeks.

Starcraft has been profitable, but not enough to meet debt obligations, Bell said.

He blamed Cuzzocrea and Bontreger for being "too much oriented to unit volume and sales revenue and not focused enough on profits and cash flow."

"The company needed to make cost reductions and changes to bring costs in line, and management was not responsive to that," Bell added.

Bell conceded that some of Starcraft's promotions — it typically wines and dines dealers at the Indy 500 race every year, for example — were "necessary and effective."

But he felt that, overall, its promotions, commissions and discounts were excessive.

"We're not going to discount as heavily, even if it means giving up volume," Bell said. "We're not in a race to be No. 1."

Starcraft will sell a little more than 12,200 units for the 1990 model year, and expects to sell 11,000 for the 1991 model year, according to Newberry.

Overseas sales account for about 20 percent of its volume. Starcraft sells vans to Europe, the Middle East and Japan.

Bell cited a softer economy next year and more competition in the international market, as well as cutbacks in discounts and promotions, as reasons for the lower sales volume.

Starcraft is third in volume behind Glaval Inc. of Elkhart, Ind., and first place Mark III of Ocala, Fla.

While vans are its strongest suit, Starcraft also produces campers, trailers and motor homes.

Bell doesn't anticipate selling any of the operations, though they are being reviewed for improvements.

Coachmen's Van Camper

The Van Camper, made by Coachmen Vans, Elkhart, Ind., is 19 feet long, two feet longer than the average van. It is built on the Chevrolet G-30/GMC G-3500 extended van.

Champion posts profit, but loses Wentworth

DRYDEN, Mich. — Clare G. Wentworth, group vice president of Champion Enterprises Inc. and president of Champion Motor Coach Inc., resigned July 23.

His resignation coincided with the restructuring of Champion's Motor Coach operations into two divisions.

Walter R. Young Jr., president and chief executive officer of Champion Enterprises Inc., will temporarily assume Wentworth's responsibilities.

Champion's Motor Home Division, serving the recreational vehicle markets, will be headquartered in Elkhart, Ind.

Dennis Sibrt was promoted to general manager, Motor Home Division, and will report directly to Young on an interim basis.

The Commercial Vehicle Division will consolidate all of its operations in Imlay City, Mich.

Champion plans to set up seperate management teams for each division, according to a company spokesman.

The restructuring will permit Champion to "both expand in the commercial vehicle market and better compete in the recreational vehicle market by focusing our coordinated efforts effectively in these two very different businesses which require very different products, services and marketing," Young said.

Champion posted its first profitable quarter in three years for its most recent reporting period. It had net income of $711,000 during the first quarter of its fiscal 1991 year ended June 1 compared to a net loss of $944,000 a year earlier.

KELPIE

FROM PAGE 2

is in the process of filing a bond prospectus with the Securities and Exchange Commission and prohibited by law from discussing it.

The registration will show Kelpie North American Holdings as the company that is going to pay off the bonds and the Wood County Economic Development Corp. as the issuer of the bonds.

Guarantees for the bonds, such as a letter of credit or bank guarantee, are still being developed, Rosenthal said.

The bonds would be underwritten by a U.S. investment bank.

Linda Amos is county executive of Wood County, Ohio, which would issue the bonds. She said, "We are, by our consitution, not allowed to put any money or risk into this bond.

"If that (outside guarantee) doesn't happen, the project wouldn't happen," she added.

The investor group which formed Kelpie North American Holdings is led by Martin Fife, who will be the company's chief executive officer.

Fife identified himself as a director of the Dreyfus Fund and "most of Dreyfus' flagship fun such as Dreyfus Liquid Assets."

Although North American Ho ings hasn't announced its board directors or key management p ple, Fife said, "The technical te has (a combined) 150 years manufacturing expertise. They very, very qualified."

The plant will consist of th connected buildings on a 70-a site, according to Paul Coop president of Kelpie North Amer Corp. and a former Americ Motors Corp. manufacturing ma ager in Toledo.

Kelpie North America Corp an engineering and manufactur subsidiary of the Australian co pany. It will become a subsidi of Kelpie North America Holdin and will be located in Northwo Another subsidiary, Kelpie No American Sales and Marketing C will be located in an as-yet un termined area around Toledo, C per said.

Cooper projects that the pla will employ 700 workers initia and 1,500 workers at full produ tion. It is also expected to hav support staff of about 250 peopl

Kelpie Holdings North Amer will also retain the small office Warren, Mich., currently opera by Kelpie Industries U.S.A. Inc.

The office now employs ab 15 people who have been do some engineering and prototy work on the vehicles.

Kelpie Industries Ltd. is loca in Matraville, New South Wal Australia. Its chairman, Rob Page, originally developed the K pie for use in his shopping cart trieval business.

In 1988, the Australian compe bought a 360,000-square-foot a plant in Monterrey, Mexico, w the idea of building trucks th for the U.S. market.

But the company decided "really did not have the financ expertise to conclude a project this size. So, it went back to original intention to license co panies with the ability to fina cially exploit the Kelpie techn ogy," said Kim Shipley, Kel Industries Ltd. managing directo

Kelpie Industries has put Mexican plant up for sale.

Kelpie Industries Ltd. would ceive $300 for every pickup sold Kelpie North American Holding

Kelpie Industries is also ne tiating to become a minority sha holder of Kelpie North Americ Holdings.

Vorderburg said that, based market research, the vehicle peals to various pickup and d very groups, such as applian dealers, landscapers, bottling beverage companies and oth who could load and unload m efficiently with the hydraulic tru bed.

It also appeals to recreation who use truck to move ATVs, skis, motorcycles and other o door items.

Wheel wells don't intrude i the truck's bed, which provides cubic feet of cargo space.

The vehicle will be in the 000 to 10,000-pound gross ve cle weight rating range, with a l capacity of 1,800 pounds, acco ing to Vorderburg. That wo make it comparable to a conv tional half-ton pickup like a Do Dakota, Ford F-150 or Chevro C-1500.

Suggested retail price for a st dard eight-foot bed vehicle will $16,500 to $17,900, several th sand dollars more than the aver price of a pickup truck.

The company is planning a range of products between 19 and 1995.

Changeovers at GM cut car output

By Anne Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Auto production dipped last week as General Motors closed seven assembly plants for model changeover.

U.S. automakers scheduled output of 86,517 units, 4.23 percent below the previous week and 2.62 percent above the year-ago week.

Truckmakers planned to produce 85,139 units last week, 7.75 percent above the previous week and 28.88 percent above the same week last year.

Estimated car production last week was split as follows: Ford Motor Co., 39.84 percent; General Motors, 28.37 percent; Honda of America Manufacturing Inc., 10.33 percent; Toyota Motor Manufacturing U.S.A. Inc., 5.09 percent; New United Motor Manufacturing Inc., 4.74 percent; Mazda Motor Manufacturing (USA) Corp., 4.63 percent; Diamond-Star Motors Corp., 3.33 percent; Chrysler Corp., 3.01 percent; and Subaru—Isuzu Automotive Inc., 0.66 percent.

Ford's Atlanta and Lorain, Ohio, car plants and the Kansas City, Mo., and Norfolk, Va., truck facilities were scheduled for weekend changeover last week.

The company slated daily overtime at the Wixom, Mich., and Wayne, Mich., car plants and at the the St. Paul, Minn.; Louisville, Ky.; and St. Louis truck facilities.

In addition to the seven car plants down last week, GM closes four more today for changeover. They are Tarrytown, N.Y; Bowling Green, Ky.; Fairfax, Kan.; and Oklahoma City. Also, the Detroit special vehicle chassis truck facility shut down today for changeover.

The company also scheduled three truck plants for weekend changeover last week: Baltimore; Flint, Mich.; and Fort Wayne, Ind.

Chrysler's Belvidere, Ill., car assembly plant is scheduled to resume production today. The St. Louis No. 2 minivan facility shuts down today for changeover. It is due to resume production Aug. 27.

Chrysler's Jeep plant in Toledo, Ohio, will be closed this week because of a parts shortage.

Nissan's Smyrna, Tenn., auto assembly line was idle last week for retraining following a two-week vacation. The company's truck line resumed production last week as scheduled.

Canada trucks rise; Ford helps

Canadian truck output rose last week as Ford's Ontario truck facility in Oakville returned to work.

Canadian truck production was estimated at 10,135 units, 44.25 percent above the previous week and 19.44 percent below 1989.

Year-to-date Canadian truck makers have assembled 508,684 vehicles, 8.22 percent behind 1989.

Canadian automakers scheduled 17,739 units last week, 12.61 percent below the previous week and 12.62 percent above last year.

So far this year, 611,925 cars have been assembled, 6.95 percent above 1989.

Chrysler restrains 1991 price hike to cut rebate burden

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In a departure from traditional Big 3 pricing strategy, Chrysler Corp. said it will increase 1991 model domestic car prices less than 1 percent on a comparably equipped basis in an effort to wean the company from incentives and rebates built into higher prices.

Chrysler's strategy assumes that General Motors and Ford Motor Co. will raise 1991 car prices about 3.5 to 4.0 percent and continue to offer hefty buying incentives and rebates.

Chrysler will try to break from the pack by reducing the number and amount of vehicle incentives offered in the 1991 model year and instead rely on sticker prices it hopes will be lower than those of domestic competitors.

"We are trying to take a modest price increase and improve our competitive position and improve our market share," said Bennett E. Bidwell, Chrysler Motors chairman. "And we hope that we can de-escalate incentives and rebates to some degree. Time will tell. The marketplace will tell.

"If the competition increases rebates and beats our brains out, we will have to revisit the subject."

There are no changes in the dealer discount, but the new Dodge Shadow America and Plymouth Sundance America will carry a 10 percent discount, compared with 13 percent on other Shadows and Sundances.

Chrysler said its tentative 1991 domestic car prices are up 0.9 percent over current 1990-model prices on a comparably equipped and sales-weighted basis.

The tentative 1991 model year prices are an average of 1.3 percent higher than comparably equipped

Growing pains vex transplants

Overcapacity, falling car sales diminish aura of invincibility

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

TRANSPLANTS

Honda of America Manufacturing Inc., that shining example of Japanese manufacturing perfection in the United States, has its headaches, too.

In a few weeks, the Marysville, Ohio, carmaker will launch its 1991 Accord, proudly becoming the first Japanese automaker ever to build a 75 percent domestic content car in the United States.

The milestone means that, under federal government rules, the Accord becomes a "domestic" car — an achievement that follows nearly a decade of political pressures to increase the use of U.S.-made parts.

But as Honda's only domestic car, the Accord must meet EPA fuel-economy requirements alone, without the averages of Honda's other, more fuel-efficient cars. It won't, and next year Honda will be in technical non-compliance with the EPA — another first for a Japanese automaker.

EPA accounting procedures will allow Honda to escape without a fine. But the development does represent a touch of ignominy for the best-selling car in America.

Who says the transplants have it so easy?

By and large, the eight Japanese manufacturers and one Korean

SAFETY NET: *Web of ownership between banks, auto industry keeps companies alive*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF WRITER

JAPAN INC.

TOKYO — Isamu Kawai, the new president of Fuji Heavy Industries, has become one of the most scrutinized chief executives in the industry.

Reporters camp on his doorstep, analysts and industry watchers examine every word he says or is quoted as saying. People are expecting major changes or a total remake of Fuji under Kawai's stewardship, and they are looking for the first signs.

Employees query visitors to see if they have any clues on what changes may be in store. It is ironic to call Fuji these days and — when the call is put on hold — to hear the voice of Jay McGovern singing, "Can you hear me, can you hear me, through the darkness, far away."

The expected reformation at Fuji is a case study in how Japan's auto industry takes care of its own. And it illustrates the web of cross-shareholding that characterizes Japanese industry and the benefits that can come from the system.

For most companies, the top 10 shareholders are banks, other financial institutions and life insurance companies, all limited by law to minority positions, and in some cases other automakers. The shareholders, with a vested interest in mutual success, are ready to help out when needed with investment, advice or a new chief executive officer.

Kawai was named to the top

Fuji chief tours U.S. operations

Isamu Kawai, 67, the new president of Fuji Heavy Industries, is scheduled to visit North American subsidiaries this week.

He was scheduled to tour Subaru of America Inc. headquarters in Cherry Hill, N.J., late last week for a "courtesy and familiarization" visit, said Subaru spokesman Richard Marshall. His week-long itinerary includes Subaru-Isuzu Automotive Inc., the joint venture in Lafayette, Ind., and Subaru Technical Center in Garden Grove, Calif.

NADA's Green a winner with low-key approach

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ray Green, the soft-spoken president of the National Automobile Dealers Association, is riding pretty high these days.

His first six months in office have been both bountiful for the association and gratifying for Green himself.

He helped strongarm General Motors into suspending the spread of Delco Tech Service Centers — a thorny issue with GM dealers.

In June, Ford Motor Co. and GM shifted policy on program cars sold to daily rental fleets, in part to mollify dealers who complained that rental companies have an unfair pricing advantage over dealers on the resale of program cars.

The two domestic automakers offered to buy back all 1991 daily rental cars, then sell them to dealers through factory-sponsored auctions. Until now, the Big 3 have been repurchasing about 75 per-

Stempel urged to be conduit for change at GM

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Robert Stempel had been chairman of General Motors only a few hours last Wednesday before he made the first of what some people hope will be a series of changes in the way GM does business.

While formally presenting GM's new top managers to the news media on the morning of his first day, Stempel also asserted his new role by announcing some organizational changes.

They were small changes, as Stempel himself said, compared with the massive company reorganizations during the 1980s. But that in itself reflected Stempel's assertion that GM made the tough decisions in the 1980s and is poised to reap the benefits in the 1990s.

He said his approach will emphasize team results, rather than the role of any individual.

Stempel and his team must deal with several challenges facing GM, including:

- Raising quality and customer satisfaction.
- Bringing new products to market quicker.
- Increasing North American market share.
- Remaining strong overseas.
- Responding to the needs of constituent groups.

The quality and reliability function is raised a notch in the new structure. Previously lumped with Service Parts Operations and reporting to then-President Stempel, quality and reliability now is separate and reports directly to Chairman Stempel.

Service Parts now is a separate entity reporting to Executive Vice President William Hoglund, along with Power Products and Defense and the Automotive Components Group.

All North American automotive operations now report directly to President Lloyd Reuss, and the materials management staff has been shifted to him from Executive Vice President F. Alan Smith. The new Engine Division, formed early this year from the engine groups at Chevrolet-Pontiac-Canada and Buick-Oldsmobile-Cadillac, remains under Reuss.

John F. Smith Jr. and Robert Schultz assumed their new vice chairman positions last week, but had no changes in their responsibilities. Smith heads International Automotive Operations, and Schultz is in charge of GM Hughes Electronics Corp., Electronic Data Systems Corp. and the Technical Staffs Group.

"Compared to our earlier international and domestic reorganization, those are not major changes, but they're indicative of what we'll be doing in the future," Stempel said. "Rest assured, we're not going to take General Motors apart and put it back together again. For GM, the '90s will be a time of adapting and aggressively building what

L-M boss expects dealers to pick buildout incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Lincoln-Mercury General Manager Ross Roberts predicts dealers probably will choose Ford Motor Co.'s buildout incentive program instead of dealer incentives offered on 1990 models after the Sept. 27 debut.

Roberts said his prediction is based on how dealers are responding to consumer incentives on Lincoln Continental and Mark VII, which run until Sept. 26. Current consumer incentives on Ford and Mercury vehicles expire Aug. 8. Dealer incentives on Ford Motor lines also end Aug. 8. Whether dealer incentives will continue in the buildout period has yet to be determined.

Roberts

According to a program announced to dealers May 10, Ford will offer $400 to $1,000 on 1990 Ford Division cars and trucks and $500 to $1,500 on 1990 Lincoln and Mercury cars sold after the 1991 models are introduced. The offer ends Dec. 31. The post-introduction incentives, which Ford said will likely be in the form of dealer cash, will be given in lieu of a carryover allowance.

Dealers must choose between the post-introduction incentive or more generous rebates for a "major summer balance-out incentive."

If Ford's competition offers cleanup incentives higher than Ford's and Ford must match competition, Ford Motor dealers may have to choose between participating in the summer buildout program or the post-introduction program.

Chrysler extends incentives, Page 43

L-M plans to offer $1,500 in a post-introduction incentive on all three Lincoln models (Town Car, Continental and Mark VII), the May 10 letter said.

Currently, the consumer rebate is $1,500 on the Continental and $2,000 on the Mark VII. No cut-rate financing is currently available on either of the luxury models. In addition, L-M is offering $1,500 to $2,300 in dealer incentives on Town Car and $1,500 to $2,000 on Mark VII and Continental, based on the number of cars sold.

During a Detroit introduction of the Mercury Capri, Roberts denied reports that some California dealers are padding the sticker prices of Capris. "I talked to some Los Angeles dealers last night, and I have zero reports of padding the stickers on the Capri by California dealers," Roberts declared.

He said early showroom traffic for the Capri shows the car is attracting "people we've never seen before" in an L-M showroom. The average L-M buyer is in his or her mid-50s while the Capri's target group is late-20s to mid-30s.

In Isuzu's 1991 model launch ads, a new "character," Harry Murphy, pitches the virtues of products like the new Rodeo sport-utility. In this spot, the Rodeo rescues six picnickers pursued by a swarm of bees.

FAST TALK: *Joe may be gone, but humor hasn't been axed from Isuzu advertising*

By Kristine Stiven Breese and Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTERS

Move over, Joe Isuzu. Here comes Harry Murphy.

American Isuzu Motors Inc. will use a clever, bespectacled commentator to replace Joe Isuzu, its smarmy, fictional huckster for the past five years. And Harry's tales of Isuzu's merits won't be nearly as tall as Joe's.

Rodeo: a poor man's sport-utility, Page 40

Harry will use comparison tests to trumpet Isuzu's virtues through funny and nonsensical vignettes. The ads are in line with Isuzu's aim of retaining humor as a way to tell its story.

In one ad, Harry discusses why Isuzu's pickup would be better than Toyota's should the planet be invaded by giant reptiles. The Isuzu, says Harry, has more cargo space, gets better gas mileage and costs less.

An ad for the Isuzu Trooper sport-utility shows a family escaping an alligator-infested swamp without having to get out and switch into four-wheel drive. Meanwhile, a family in a Toyota 4Runner can't escape because switching to rear-wheel drive requires going outside.

(Actually, not all Troopers have automatic locking hubs, which allow drivers to shift into 4wd from inside. And not all 4Runners have to be manipulated from outside the truck.)

An ad for the new Rodeo sport-utility demonstrates its roominess when Harry releases a swarm of bees during a picnic. The group that climbs into a Rodeo S has all six family members safe and accounted for; the other family can't squeeze all six into its 4Runner.

(Harry doesn't mention that other versions of the Rodeo will

Japanese trader buys deals for market toehold

By Mary Ann Mastony
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — When Nissho Iwai Corp. bought a BMW dealership in California 2½ years ago, some people thought it was funny, a Japanese trading company buying one dealership.

But Toma Masaoka, general manager of the automotive department, says, "To us, it wasn't funny." It was a beginning.

Now, Nissho Iwai owns two dealerships in California, one in West Germany, two in Japan — and counting.

But dealerships themselves are not the goal. "Just owning one dealership does not mean anything" to a trading company that deals in volume, according to Masaoka. "A dealership is just a start to get into the market. We would like to go into other fields."

Nissho Iwai is looking at a much broader involvement in the automotive business, Masaoka says, from trading raw materials to sophisticated electronic components.

It is part of a larger corporate strategy to break away from the traditional dependence on exports from Japan, according to Masaoka.

Traditionally, the trading companies have helped Japanese manufacturers establish footholds in overseas markets. They helped initially in the United States, before most manufacturers set up their own distributor networks, and they still help some of the smaller makers. Traders C. Itoh & Co. and Sumitomo Corp., for example, together own 50 percent of Mazda Motor of America Inc. C. Itoh also operates one dealership in New York state at Mazda's request.

But the primary value of the trading companies is in setting up operations in newer or less developed markets. Nissho Iwai now helps Toyota Motor Corp. sell cars in Poland and in Africa. The trading company performs part of the function of a distributor, bringing cars into the area at its own risk, on consignment. Thus, the local distributor does not need as much money to carry inventory.

Toma Masaoka: Buying dealerships is just part of Nissho Iwai's plan.

Nissho Iwai also has joint ventures with Mitsubishi Motors Corp. to assemble Mitsubishi vehicles in the Philippines and Malaysia. But that is more of the same traditional export business, shipping components for assembly kits, Masaoka says. The export climate is changing, he says, and a trading company's function has to change, too.

In an evolving world market, Japan will be only one source of supply, Masaoka says. He envisions Nissho Iwai becoming a multi-nation export-import business linking the world's auto markets.

Nissho Iwai's first dealership in California, Weatherford BMW, has annual sales of $40 million, he

SEOUL, South Korea — Hyundai Motor Co. hasn't given up on its plan to sell 30,000 cars to Chrysler Corp., much less its plant in Bromont, Quebec. What others have seen as reversals, the Korean automaker sees as delays.

And even if the deal with Chrysler ultimately falls through, says Dal-Ok Chung, managing director of export operations for Hyundai, it will not affect the future of the Bromont plant.

Under the agreement announced in February 1989, Chrysler was to begin purchasing 30,000 modified Sonatas a year, starting in September 1991, for its Jeep-Eagle Division. But the U.S. auto market has since gone soft, and Sonata sales have not met Hyundai's original targets.

Last month, Chrysler said it had canceled the 1989 agreement but would consider a more differentiated version of a successor to the Sonata.

As Chung views it, the deal is still on, and only the timing has been affected.

"The negotiations took quite a long time, so we lost preparation time to meet the schedule," he says. "We will launch updated models of the Sonata for North America in September 1992."

Chung expects Chrysler to take a version of that model. He said he is not disheartened by news that Chrysler is poised to add the Mitsubishi Colt to the Eagle line because as a subcompact, Colt addresses a different market segment.

According to Chung, Hyundai and Chrysler have agreed on all the terms in the negotiation except price. Chrysler officials have declined to comment on reports that they are demanding significant price concessions from Hyundai.

The Sonata deal is considered important for the Bromont plant, which has been assembling cars from parts imported from Korea. The plant, which has a capacity of 100,000 cars a year, opened in April 1989 but produced only 14,000 Sonatas last year. It is expected to build about 30,000 cars this year, and 50,000 in 1991, still far below the 75 percent operating ratio considered to be the break-even point.

But Hyundai has big plans for its only offshore manufacturing facility. Construction of a $120 million stamping plant at Bromont is on schedule to open in October, said Chung.

"Even if Chrysler backs out of the deal, that is no problem for the Bromont plant," Chung says. "We need the production capacity."

While U.S. demand has been stagnant, sales are booming in Korea, so one way to use more of Bromont's capacity, said Chung, would be to re-import some Sonatas for the Korean market. Other options include exports to markets besides the United States and, in the long term, retooling the plant to assemble other Hyundai models.

Sagging exports and high interest payments have dulled the shine on Hyundai's financial statements. Hyundai Motor's sales in the United States last year fell 30.66 percent to 183,261 units and continued to decline at about the same rate during the first half of 1990.

Koon-Ho Kim, an automotive analyst with Coryo Research Institute, says declining profits since 1988 have caused Hyundai to skimp on research and on tax-exempt reserves for international marketing.

In 1989, Hyundai's sales were up 7.6 percent to $5.6 billion but net operating income declined 54.6 percent. The drop was due largely to high interest payments on new plant investments, Kim says. He contends that Hyundai was able to report a net profit in 1989 only because it deferred special depreciation.

But as Korea's leading automaker, Hyundai's long-term financial position remains strong. A booming Korean market has provided a cushion to recent export woes. Home-market sales accounted for 73 percent of Hyundai Motor's total sales last year, compared to just 48 percent in 1988.

Wanted: American suppliers

Hyundai Motor Co.'s North American subsidiaries are looking for American suppliers for Sonata components.

Combined with Canadian-made stampings from Hyundai's new stamping plant in Bromont, Quebec, the components would raise North American content of the car beyond 50 percent, enough to allow duty-free import from Canada.

Hyundai hopes to achieve that level in 1995 or 1996, said Greg Young, a spokesman for Hyundai Motor Canada.

The first of two stamping lines at the plant will begin working in October and its twin in December. The plant will turn out exterior body panels, some interior panels, fuel tanks and other parts.

Chrysler earnings nosedive

High incentives, weak sales blamed

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Plagued by weak sales and the strongest sales incentives of the Big 3, Chrysler Corp.'s second-quarter net earnings plunged 47 percent from 1989 levels.

Chrysler said last week that it earned $180 million, or 81 cents per share, in the second three months of 1990, down from $341 million, or $1.46 per share, last year.

Chrysler's second-quarter sales and revenues were $8.85 billion, down 10.2 percent from $9.85 billion in the same period of 1989. Worldwide factory sales of cars and truck totaled 585,615, off 15.8 percent from last year.

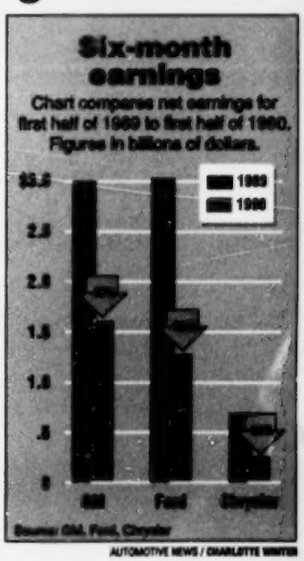
At the same time, per-vehicle incentive costs ballooned. Chrysler said incentive costs in the second quarter of 1990 averaged $1,200 per vehicle, up from $700 per unit a year earlier. Ford reported its incentive costs at $1,050 per vehicle sold in the second quarter, and a GM source said GM's incentive costs were comparable to Ford's.

Chrysler has said it anticipates a "substantial loss" in the third quarter when the company will lose production of 60,000 popular and profitable minivans due to model changeover at two assembly plants.

Company officials have said they expect a recovery in the fourth quarter.

Chrysler's second-quarter results echoed those of General Motors and Ford Motor Co. GM's earnings were off 38 percent, and Ford's dropped 45 percent in the second quarter.

Included in Chrysler's second-quarter results was a one-time charge of $22 million due to cancellation of a joint venture with Regie Nationale des Usines Renault to build a small sport-utility vehicle. Chrysler also listed a one-time charge of $13 million for payments to union-represented employees who opted for early retirement.



AUTOMOTIVE NEWS / CHARLETTE WINTER

The second-quarter results also included a gain of $7 million from operations of Gulfstream Aerospace Corp. Chrysler sold Gulfstream for $825 million in March. The company said the sale resulted in a pretax gain of $40 million that was offset by an equal amount of applicable income taxes.

Chrysler Financial Corp. reported second-quarter earnings of $85 million, or 47 percent of Chrysler Corp.'s profit for the period.

Chrysler Corp. said second-quarter earnings rose substantially over the first quarter, when it earned only $71 million.

The company said its $1.5 billion cost-cutting program "contributed significantly to first-half profitability."

But cost-cutting gains have been offset by weak sales and hefty sales incentives. In addition, Chrysler is the only one of the Big 3 that does not have significant overseas operations to generate profit.

During the second quarter of 1990, Chrysler's car and truck sales in the United States tumbled 21.4 percent from 1989, and its share of the U.S. car and truck market dropped to 11.7 percent, off from 13.9 percent a year earlier.

British aid to Toyota under scrutiny by EC

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The European Commission is investigating whether Toyota Motor Co. received illegal local government aid in the form of a cut-rate price for an assembly plant site in the United Kingdom.

Meanwhile, an EC Competition Office spokeswoman in Brussels, Belgium, said a separate investigation into government support for Chrysler Corp.'s joint minivan production venture in Austria is continuing. The results were due several weeks ago.

The commission has taken an increasingly hard line on competition issues. It ruled recently that the British government granted £44 million ($82.3 million) in illegal aid when selling the state-owned Rover Group to British Aerospace in 1988. British Aerospace had to return the money.

The Brussels panel is investigating Toyota's purchase of a 280-acre parcel in Derbyshire, England, for the site of a car plant that is scheduled to begin production in late 1992. If it finds that illegal aid was received, it can order Toyota to repay the amount.

The spokeswoman said a local assessor valued the land at £45,000 ($84,150) per acre, or £12.6 million ($23.6 million) for the site. But the property was sold by the Derbyshire County Council for £9.9 million ($18.5 million), or £35,357 ($66,000) per acre — about 22 percent below the assessed value. The commission is also reviewing Toyota's purchase of an adjacent 300-acre parcel.

The EC spokeswoman said "the commission considers that the difference between the assessed value and the price paid constitutes state aid" in a region not eligible for offering support to industry as an incentive.

Derbyshire County officials maintain that the property was sold at the going rate. Toyota officials have said they welcome the EC investigation in hopes of clearing up any remaining controversy over the purchase of the land.

The spokeswoman said "there is no evidence of any central government involvement in determining the price fixed for these land sales."

The EC is also investigating whether the Austrian government provided excessive support to Eurostar GmbH, Chrysler's 50-50 joint venture with Steyr-Daimler-Puch Fahrzeugtechnik in Graz. Eurostar is scheduled to begin producing Voyager minivans there in June 1991.

Federal, state and local government units will pay one-third of the investment cost of the 4.33 billion Austrian schilling ($388 million) project.

Though Austria is outside the European Community, EC officials maintain that because 95 percent of Eurostar production will be exported to EC countries, they have jurisdiction to impose a special tariff in EC member states.

When the investigation was revealed last spring, EC officials said they expected it to be completed by the end of June.

AROUND THE WORLD

Indonesia sales boom; Nissan hopes to boost share

By Stephen Vines
STAFF CORRESPONDENT

JAKARTA, Indonesia — Indonesia's rapidly growing economy is set to create a record year for the country's automakers.

The Indonesia Automotive Industry Association predicts record sales of 240,000 units this year, exceeding the previous record in 1981 during the oil price boom.

Increased demand is coming from middle-class domestic buyers, medium-sized businesses and enterprises by the flood of foreign investors setting up in Indonesia.

Last year 174,849 vehicles were sold. Sales in the first quarter of this year were up by 50 percent, although the year-end increase is estimated to have slipped back to around 37 percent.

Although Indonesia has been liberalizing its import policies over a wide range of products, the auto industry remains behind a high wall of protectionist barriers.

There are very few imports, and all production is derived from cooperation with overseas manufacturers supplying complete knock down kits for assembly by local joint venture companies. Japanese joint ventures account for 92.5 percent of sales.

The government's protectionist policies have encouraged a proliferation of models in this relatively minor market: 26 different marques are being produced.

Indonesia's Big 3

PT Toyota-Astra Motor: 48 percent market share. Assembles and sells Toyota, Daihatsu, Honda, Isuzu, BMW, Peugeot, Fiat and Renault vehicles.

PT Indombil Utama: 26 percent market share. Part of the Salim group. Assembles and sells Suzuki, Mazda, Hino, Volvo and Nissan vehicles.

PT Krama Yudha: 16 percent market share. Assembles and sells Mitsubishi vehicles.

The small scale of production makes it virtually impossible for the Indonesian auto industry to become a world-scale competitor.

But with a population of 175 million, the fifth largest in the world, the home market offers considerable attractions.

Capitalizing on the marked improvement, PT Toyota-Astra Motor, Indonesia's biggest maker, is planning to increase production from 70,000 to 100,000 units a year. By 1992, it aims to have assembly capacity of 120,000 units. Toyota Motor Corp. has 51 percent in Toyota-Astra Motor. The remainder is owned by PT Astra International Inc., one of Indonesia's biggest conglomerates.

Nissan Motor Co., the only major Japanese maker lacking a sizeable presence here, is set for a fresh attempt to boost its market share.

It has shifted its past partnership with Wahana Wirawan to give a license to a new partnership with the Biamantara and Salim groups. The resulting Indo Cirta Buana company will make Nissan cars and components for Indonesia, and eventually for overseas markets.

Fuji Heavy Industries has begun a study to explore the potential for manufacture of small commercial vehicles here. It has yet to be granted a manufacturing license.

The recovery in the Indonesian auto industry has been slow. At its low point in 1985, only 139,400 vehicles were sold.

Only Toyota Astra Motor appears to be a contender in the international marketplace with its Kijang van, which doubles as a passenger vehicle. It shipped some 600 to Brunei and Papua New Guinea last year. PT Indombil has a small contract for supplying Suzuki minibuses to Bangladesh.

But there are more serious prospects of increasing component exports. According to Tungki Ariwibowo, junior industry minister, auto industry exports rose 130 percent in 1989 to $110 million. Tires accounted for 69 percent and batteries nearly 15 percent.

PT Astra International, capitalizing on its links with Japanese and European car companies, is particularly keen on expanding its component export sales. It recently paid $42 million to acquire a Canadian auto parts distributor with a view to enhancing the U.S. and Canadian distribution of its products.

The Indonesians have shunned repeated advances for participation in the Association of South East Asian Nations parts-sharing scheme, aimed at creating economies of scale among members.

The view from Jakarta seems to be that Indonesia has more to lose than gain by allowing access to its potentially vast market, albeit recognizing the possible loss of competitive edge in world markets.

The government is keenly pursuing localization policies, but has faltered on a target for full local manufacture of components. The current target stands at 1991, but is expected to be put back again.

Car production is small. Sales for many years stagnated at around 30,000 units a year, although sales of over 43,000 are expected for this year. Despite expansion, the Indonesian industry suffers from excess capacity and lack of economies of scale.

There is some hope that the wave of economic reform which has led to deregulation in many other sectors may turn in the direction of the motor industry, but the government has given no clear indication of moving in this direction.

Canadian sales dip almost 3% in June

*U.S.-built Mazdas sold before June 1989 are included in import car tables.

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canadian truck sales sagged in June, and car sales were down a hair. Total new-vehicle sales fell 2.89 percent below the 1989 total.

Sales of imported and North American-built cars and light trucks reached 135,026 units, down from 139,046 in June 1989. Car sales dropped less than a percentage point, but light-truck sales were off 8.07 percent.

Combined car and truck sales wound up the first half of the year at 727,425, 8.67 percent behind 1989's midyear total of 796,458.

Among the Big 3, General Motors of Canada's sales of North American-built cars gained 7.94 percent in June. Bill Atkinson, marketing vice president, said sales of Chevrolet Sprint/Pontiac Firefly were up over 60 percent, and deliveries of Chevrolet Cavalier/Pontiac Sunbird rose over 50 percent.

Ford of Canada's sales of North American cars dropped 15.52 percent in June, and Chrysler Canada suffered an 18.86 percent decline.

Imported cars as a group were down 2.21 percent in June, but Volkswagen continued to show strength. VW sales were up 24.94 percent on the month and 30.12 percent for the year. BMW was the only other European make to gain for the month, but its sales were off 17.90 percent for the first half.

Mazda did well with combined sales of U.S.-built and imported cars. The Miata and the 323 Protege performed well as total June Mazda car sales rose 27.21 percent.

On the North American light-truck side, GM held even in June, Ford slipped 12.24 percent, and Chrysler dipped 19.47 percent.

Imported trucks managed a 2.08 percent gain in June.

Big 3 wield little influence despite stock holdings

TOKYO — The U.S. Big 3 all have substantial holdings in Japanese automakers and representation on their boards, but none claims any strong influence in the management of those companies.

General Motors owns 38 percent of Isuzu Motors Ltd. and has five people on a board of 40. One of the five, Richard Johnson, executive vice president of GM Overseas Corp. in Japan, says he attends management meetings at Isuzu regularly and that there is a fairly open exchange of information.

GM sold 20 million shares of Isuzu stock last December, reducing GM's share in the company from 40 to 38 percent. The companies have a number of joint ventures worldwide and are perceived as associates.

But, Johnson says, "They don't necessarily do what we tell them to do. They do what is best for their company."

GM owns 3.6 percent of Suzuki Motor Co. but has no representatives on the board and has not sought board seats. Johnson says CAMI Automotive, a GM-Suzuki joint venture in Ingersoll, Ontario, that produces cars and sport-utilities, represents the first major operation between the two companies.

Chrysler Corp. also sold stock last year, reducing its share in Mitsubishi Motors Corp. from 21.8 to 12.1 percent. Board representation was cut from two seats to one.

But J.B. Higgs, managing director for Chrysler's North Pacific Operations, who sits on the Mitsubishi Motors Corp. board, says Chrysler's influence with Mitsubishi is really as a business partner, not as a shareholder. Higgs lists the joint ownership of the Diamond-Star Motors plant in Normal, Ill., and the purchase of Mitsubishi engines and vehicles, as the basis of the relationship.

The shareholding, he says, is just "some of the glue that makes the relationship work."

Chrysler, he says, would not force decisions on Mitsubishi.

Ford Motor Co. seems to have the most direct contact with a Japanese partner. Ford owns 25 percent of Mazda Motor Corp. and has four persons on the board. One of them, Bill Kath, is a full-time director, working in Mazda to represent Ford interests.

Ben R. Lever III, Ford's executive director for North Pacific Business, says board representation gives Ford input at Mazda, but he says he would not equate that with influence in the company.

— Mary Ann Maskery

Note: Some makers offer rebates to buyers of 1990 and 1991 models. Most of these programs are omitted from this table because of the limited number of these vehicles still in dealers' hands.

Chrysler, GM, imports extend incentives

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Several automakers announced new or extended customer and dealer incentives last week.

Chrysler Corp. extended through Aug. 10 its consumer incentives on a wide range of 1989 and 1990 models that were scheduled to expire July 31. It also increased incentives on standard-sized Dodge Ram vans and wagons from $500 to $1,000 and incentives on standard Ram van conversion units from $1,000 to $1,500.

The company also said zero percent financing for up to 24 months continues on the 1989-90 Dodge Shadow, Spirit, Monaco, Dynasty, Dakota and Ram two-wheel-drive and 4wd pickups; Plymouth Sundance and Acclaim; Chrysler LeBaron sedan, Fifth Avenue, Imperial and New Yorker Landau and Salon; Eagle Premier; and Jeep Comanche, Cherokee and Wagoneer.

Buick's incentive program on most of its 1990 models was extended from Aug. 2 to Sept. 26. The division expanded the program by announcing a $3,000 consumer rebate on the 1990 Reatta.

Pontiac and Oldsmobile consumer programs, scheduled to expire Aug. 2, also were extended through Sept. 26.

Pontiac adjusted its program by increasing the rebate on the Trans Sport from $1,000 to $1,500 by adding a $500 contribution from participating dealers. Pontiac also added a $1,000 rebate on 1991 Firebirds.

Oldsmobile added customer rebates on several car lines: Cutlass Calais, $750; Cutlass Supreme, $2,000 at participating dealers; Custom Cruiser, $1,000; and 98 Touring Sedan, $1,000.

Among the imports, Suzuki and Mazda announced revisions and extension of their consumer rebate programs, and Volkswagen altered its dealer incentives.

Suzuki extended its rebates, scheduled to expire Aug. 2, to Oct. 2. It added paybacks of $500 to $600 on 1991 Sidekick models and reduced the range of rebates on the Swift from $400-$2,000 to $400-$1,500. The Suzuki program allows dealers to keep the rebates or pass them on to buyers.

Mazda extended until Oct. 2 its incentives on the Protege SE and LX and 323-SE. The 323 carries a $750 cash rebate, while the Protege offers an automatic transmission or air conditioner at no charge.

VW extended dealer rebates on Golf and Corrado to Aug. 31 and cut the Golf payment in half, to $500. The Corrado rebate remains at $1,500. The Fox rebate, which stays at $750 to $1,000, also expires Aug. 31.

Special Correspondent Wes Brown contributed to this report.

*Quotas apply on Eclipse and Zwd pickups in some regions.
*Customer rebate or dealer rebate; dealer's choice
**$3,000 in California

Note: Some makers offer rebates to dealers on sales of 1990 and 1991 models. Most of these programs are omitted from this table because of the limited number of these vehicles still in dealers' hands.

GREEN

FROM PAGE 42

Tonkin and others in bringing dealer concerns into sharp focus.

But he bristles at the notion that many of the gains NADA has made recently would have happened anyway.

"Many things have happened on my watch as president," he says. "But they are happening faster because I am able to go to the factory. I talk to them directly and tell them what I want. I don't dictate issues — I negotiate them."

Still, there's no doubt Green must share some of the credit for his successes with Tonkin.

"Doors were opened to Green by the manufacturers after Tonkin bashed them down," said James A. Willingham, chief executive officer of Boulevard Buick-GMC in Long Beach, Calif.

But dealers quickly add that Green's style, his willingness to negotiate and his understanding of manufacturers' problems have been the keys to his success.

"I don't think you have seen any year where NADA has had three big wins in a row — buybacks, dealer advisory boards and the 5 percent carryover," Brooks said.

Since the 1950s, GM paid dealers 5 percent of sticker for all cars left in stock when the new model year begins. In recent years, because of high inventories, GM has held promotions to clear vehicles and has reduced or eliminated the payment. This year, GM will pay the 5 percent on carryover models sold between intro day and Dec. 31 unless dealers choose to surrender all or part of it by participating in a cleanup promotion.

Not everyone associated with the automobile business is so laudatory. Raphael Cohen, former new-car dealer, chief executive of Affordable Used Cars and publisher of *Automotive Dealers Digest* newsletter, called Green ineffective. He added that NADA has lost the vitality that Tonkin gave it.

"I would not give him (Green) high marks," said Cohen. "He is not addressing dealer problems. The dealer input part of the new GM agreement is couched in language that is ambiguous."

Output tops 6 million; trails 1989

By Anne Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. car and truck producers assembled their six-millionth vehicle of the year last Thursday. Last year, the six-millionth vehicle was built June 27.

Year-to-date, U.S. car and truck production is 6,040,060, 10.66 percent below last year. This year's total consists of 3,630,794 cars and 2,409,266 trucks.

U.S. makers scheduled output of 98,167 cars last week, 1.40 percent above the previous week and 15.49 percent above the year-ago week.

Truckmakers scheduled 71,415 units, 9.65 percent below the previous week and 4.25 percent below the same week in 1989.

Last week's targeted auto production was split as follows: Ford Motor Co., 34.96 percent; General Motors, 28.53 percent; Chrysler Corp., 11.10 percent; Honda of America Manufacturing Inc., 9.15 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.42 percent; New United Motor Manufacturing Inc., 4.18 percent; Mazda Motor Manufacturing (USA) Corp., 3.80 percent; Diamond-Star Motors Corp., 3.25 percent; and Subaru-Isuzu Automotive Inc., 0.61 percent.

Last week, Ford scheduled five plants to work daily overtime: the Wayne, Mich.; and Wixom, Mich., auto assembly plants and the Twin Cities (St. Paul, Minn.); Louisville, Ky.; and St. Louis truck facilities. St. Louis also was scheduled for Saturday overtime.

GM reopens four car assembly plants today following shutdown for model changeover. They are: Flint, Mich.; Detroit-Hamtramck, Mich.; Orion Township, Mich.; and Wentzville, Mo.

The Wilmington, Del., car plant is scheduled for a rolling model changeover today.

GM closed its Lakewood, Ga., car assembly today; it is scheduled to be down indefinitely. The Buick Estate Wagon was produced there.

Chrysler has scheduled two eight-hour daily shifts at five plants this week: the Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich., car facilities and the Toledo, Ohio; and Warren, Mich., truck facilities.

Nissan's Smyrna, Tenn., auto assembly line was idle again last week for retraining and is not expected to resume production until later this month.

GM on vacation; Canada plunges

Canadian car and truck production dropped last week as General Motors closed all its car and truck facilities for a two-week vacation.

Canadian auto production was scheduled at 9,685 units, 39.81 percent below the previous week and 23.10 percent below the year-ago week.

Truckmaker's targeted production of 4,324 last week was 57.73 percent below the previous week and 51.65 percent below this week last year.

Oil shock puts industry on crisis alert

AUTOMOTIVE NEWS-JOE WILSSENS

Price pangs

Don Clapp raises gasoline prices at Dick's Sunoco, New Baltimore, Mich., for the third time since the Aug. 2 Iraqi attack on Kuwait.

Car sales periled as gas prices rise

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The movement of one army in the Middle East again has brought the auto industry face-to-face with a double-edged sword: higher gasoline prices and the prospect of recession.

The slumping U.S. industry was already helping to drag the U.S. economy toward a standstill. And with Iraq's invasion of Kuwait, economists began dusting off formulas concerning the impact of rising fuel prices on car sales.

The scenarios weren't promising. Prices of crude oil rose by almost 50 percent as the world boycotted oil from Iraq and Kuwait, which together last year had 7.37 percent of the world's production. A week after the invasion, prices for self-serve unleaded gasoline had risen an average of 16.2 cents per gallon nationally. If the increase holds, it could cost the U.S. industry a half-million sales annually, according to General Motors economists who say that for every 15-cent increase in gasoline prices, vehicle sales drop by 500,000 units.

The possibility of prolonged Middle East instability and an era of tighter oil could also alter the ground rules for automotive sales success.

To be sure, minicar specialists such as Daihatsu Motor Co. have reason to smile. And prospects for BMW's V-12 models have hardly been enhanced, despite claims by some experts that buyers who shell out $70,000 for a car don't pay attention to gas prices.

But the consensus among analysts is that there is far more competitive balance — but not parity — among the world's automakers than there was in the 1970s, when U.S. buyers flocked to fuel-efficient Japanese

No effect yet, dealers say

By Greg Bowens and Wes Brown
SPECIAL CORRESPONDENTS

An *Automotive News* survey of 47 dealers nationwide indicates there will be no surprises in the 10-day sales report due Tuesday.

Five of the 13 dealers who reported a drop in sales blamed the Iraq crisis.

Joe Gentile, owner of a Barrington, Ill., Chrysler dealership, said, "I think people are apprehensive because they don't know what's going to happen."

Meanwhile, 14 dealers reported an increase in traffic last week, and 20 said there was no change in sales or showroom traffic. Nissan-Jeep-Eagle dealer Trevor Rolfe of Carson City, Nev., summed up the majority opinion of dealers on the effect of the crisis on sales: "It's just too early to tell."

Stempel wand gives new look to GM staffs

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Erdman

Whitman

Katko

For a new chairman who said major changes in the organization weren't needed, Robert C. Stempel's version of General Motors already looks different from the GM that Roger B. Smith left behind.

In a string of important moves during Stempel's first full week on the job, GM announced:

- A major shakeup in its marketing, public relations, product planning and economics staffs.
- The creation of a GM Supplier Policy Forum to improve communications between the corporation and its suppliers. The group is modeled after the GM-Dealer Policy Committee, a group of GM dealers that works with the company on policies affecting dealers.
- The appointment of Michael

1995 Chrysler compact pushes luxury car aside

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — Chrysler Corp. will delay development of its new luxury-car platform in favor of the 1995 replacement for its bread-and-butter car lines.

Chrysler had considered introducing in about the 1995 model year a rear-wheel-drive luxury car powered by a V-8 engine. The program's code name is LX.

But Glenn Gardner, Chrysler general manager of new platform engineering, said that instead, the company will focus on engineering its new compact platform.

Gardner identified the platform that will receive the extra attention — code-named JA — as mid-sized, but declined to provide additional details. However, Chrysler previously has identified its upcoming LH platform as mid-sized, and company sources have identified JA as a compact platform.

The new JA platform has been scheduled for a 1995 model-year introduction. It will replace Chrysler's A-body Dodge Spirit, Plymouth Acclaim and Chrysler LeBaron sedans and the J-body Chrysler LeBaron coupe and convertible.

The company's decision signals its intent to try to regain market share in the heart of the car market. Chrysler has been roundly criticized by analysts for relying on Jeep and minivans for corporate profits while tolerating weak car sales. In the first half of 1990, Chrysler's share of the U.S. new-car market dropped to 9.0 percent from 10.65 percent for the first-half of 1989.

Gardner, speaking to reporters at the University of Michigan Management Briefing here, said Chrysler will introduce its new mid-sized LH platform in the 1993 model year. The compact JA platform will bow two years after LH, he said.

Gardner said Chrysler decided to delay the limited-volume luxury LX because "it is one of those products that you could do or not do and it would not make or break the corporation."

But mid-sized and compact products are vital to Chrysler, he said. And dealers have told the company that "they must be protected in that market," Gardner said.

He would not say how long LX will be delayed. The program had not received final corporate approval, but the program was anticipated for the 1995 model year. LX was planned as a stretched de-

Golden parachutes protect Subaru execs

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Four top Subaru of America Inc. executives have secured "golden parachutes" worth three years of salaries and benefits if they are fired after Fuji Heavy Industries Ltd. takes over Subaru.

Chairman Harvey H. Lamm, 54, and his three-man management team declined to say last week whether their severance agreements mean they are more or less likely to leave the company. Lamm, a co-founder of the distributor in 1968, had said earlier they planned to stay after the merger, which is scheduled for Sept. 30.

Agreements have been negotiated for Lamm; Thomas R. Gibson, 47, president and chief operating officer; Marvin S. Riesenbach, 60, executive vice president and chief financial officer; and Philip L. Lustbader, 40, group vice president and general counsel.

Mercedes still thrills owners, Power finds

By Kristine Stiven Breese and Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTERS

Mercedes-Benz took the J.D. Power and Associates' Car Sales Satisfaction Index crown for the fourth straight year, while Infiniti and Lexus debuted near the top.

The survey measures consumers' perception of quality in three areas: initial product quality, in which Mercedes-Benz ranked highest; salesperson performance, in which Infiniti placed first; and delivery, in which Saab ranked highest.

Salesperson performance is weighted most in the index.

Toyota finished ahead of Honda for the first time in the four years of the survey. Porsche fell mightily, from a tie with Buick for third last year to somewhere below average. Power did not release the Porsche score.

Also released last week was the Power 1990 New Compact Truck Sales Satisfaction Index Study. Scores above the industry average of 93 were: Ford and Pontiac, 103; Chevrolet, 102; Oldsmobile, 100; GMC, 99; Toyota, 97; Chrysler, 95.

More than 100,000 owners of new cars, trucks and minivans were surveyed three months after their purchases.

Bidwell, Jeep-Eagle dealer spar over product allocation

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

In what seemed like verbal volleys before a barroom brawl, a dealer zone chairman and Chrysler Motors Chairman Bennett Bidwell sparred over the allocation of products to the company's Jeep-Eagle franchise.

It began when New Orleans Jeep-Eagle zone chairman Johnny Beck criticized Chrysler and its management in a letter to all dealers in the zone, which includes Mississippi, Alabama, Louisiana and the tip of northern Florida.

Somehow, Bidwell got a copy of the letter. And that prompted Bidwell to fire back a reply to those same dealers.

The underlying issue is Chrysler's product allocation to the Jeep-Eagle network, which was created with Chrysler's purchase of American Motors Corp. in 1987.

Caught in the crossfire, dealers glimpsed a rare public display of temper between the factory and one its retailers.

For example, Beck's three-page message to all dealers in the zone claims that "Chrysler Corporation does not give a damn about your individual success as a Jeep dealer. This means the great Chrysler Corporation does not care about your company, you as a dealer or your family. The only exception would be something that directly benefits them."

Beck further charges that in the wake of the AMC purchase, Chrysler Corp. chairman Lee Iacocca "flat out right lied" to Jeep-Eagle dealers about future product plans.

In a reference to Chrysler's recent decision to sell the three-door Mitsubishi-built Colt subcompact

GM eyes throwaway video as direct mail of the future

By Kathy Jackson and Phil Frame
AUTOMOTIVE NEWS STAFF REPORTERS

It may become the ultimate junk mail, but Chevrolet thinks disposable videocassettes could trash catalogs as direct-mail marketing tools.

Chevrolet's use of throwaway cassettes is 18 months to two years away because the technology must be developed further, said Michael Erdman, outgoing Chevrolet general marketing manager.

"We've done a lot of research, and I think there's a good possibility (of using video) if you get the cost down," Erdman said.

Erdman, who becomes vice president of marketing for General Motors of Canada Sept. 1, said Chevrolet could aim videocassettes at one million homes annually. Studies estimate that 62 percent of U.S. households have at least one videocassette player.

The campaigns could be used to promote Chevrolet's total vehicle line or just new vehicles, he said.

Erdman said such plans would depend on more development of the cardboard cases and paper-based videotape that are key to disposable cassettes. Videos now are made of plastic and Mylar tape.

Disposable tape supposedly would cost less and could be viewed eight to 12 times before the image began to wash out.

Erdman said the cost of sending out four- to six-page catalogs is about $12 per piece. He estimated that the cost of sending a marketing message via disposable videocassettes could be $8 per piece.

Chevrolet, like some other car companies, already distributes videos, generally to dealers or buyers of certain vehicles.

Chris Hudson, senior design manager for Carlson Marketing Group, a video production company in Troy, Mich., said the cost to duplicate current cassettes is $3 to $4 each. Hudson said disposable tapes would reduce the duplication cost to about $2 each.

Erdman said he anticipates the costs for production, postage and buying mailing lists would be the same for catalogs and disposable videos. The savings in disposable videos would be in duplication and materials, he said.

Videos could have a bigger impact than printed matter, at least at the outset, Erdman said.

If Chevrolet does distribute a million videocassettes, video company executives say it would be the biggest campaign ever with that technology.

A Bugatti worker is shown with the 60-valve V-12 engine that will utilize four turbochargers, develop 550 horsepower and push the supercar beyond 210 mph.

TERRA FIRMA: *Bugatti venture appears solid after a failed palace coup*

By Richard Johnson and Luca Ciferri
AUTOMOTIVE NEWS STAFF

CAMPOGALLIANO, Italy — Despite a thwarted takeover attempt by its managing-technical director last month, the fledgling Bugatti supercar venture here has every appearance of being on solid ground.

Compared to the usual hand-to-mouth look of independent carmaking startups, the size and grandeur of this enterprise is startling.

Bugatti Automobili S.p.A. Appears to have no lack of resources. For an outfit that hasn't begun road testing its first prototype, Bugatti has a dazzling new set of modern buildings and is still adding to its supercar campus in Campogalliano, about six miles northwest of Modena. And this Xanadu is made all the more intriguing by dint of its mysterious financial backing.

The first Bugatti model, expected to cost almost $650,000, is still unseen by the outside world. But it is understood to be a mid-engine, four-wheel-drive two seater. Power will come from a 60-valve V-12 engine that utilizes four turbochargers, develops 550 horsepower and pushes the car beyond 210 mph. Road tests will start either this month or next on a remote Michelin test track in southern Spain.

The group picks up the mantle of legendary Franco-Italian carmaker Ettore Bugatti, who died in 1947 at age 66 after producing reliable, enduring and beloved

Peugeot and GM lead European productivity gains

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Peugeot S.A. and General Motors Europe, which have added market share faster than other European auto companies in recent years, emerged in the late 1980s as Europe's most efficient carmakers, according to a new study.

The report also says that despite a 32.70 percent hike in productivity from 1982 to 1987, European carmakers still lagged well behind the Japanese. The report cited separate figures, which show the Japanese at 16.27 vehicles per employee in 1988.

London-based Euromotor Reports Ltd.'s extensive "European Car Factory Report" includes a detailed directory of 68 assembly plants and 169 component and design facilities. The report forecasts several trends, including the emergence of "hyperplants" with twice the capacity of the average European plant today.

It also contains the first major, independent attempt to gauge capacity in Europe.

The Peugeot Group, including the Peugeot and Citroen brands, topped productivity tables at the conclusion of the study period in 1987 with output of 17.36 cars per employee annually.

GM was next at 15.82 cars.

Since then, GM and Peugeot have led Europe in market share growth, and profits have increased sharply for both.

SOURCE: Euromotor Group

Peugeot and GM Europe also have embarked on a three-pronged strategy recommended by the study's authors:

- Rehabilitating existing plants.
- Breaking down bottlenecks.
- Selective use of three-shifting instead of building new plants.

The report warns that "capital should only be committed to new factory construction to replace completely uneconomic facilities."

GM Europe has pioneered three-shift scheduling, and Peugeot is considering round-the-clock operations at key plants. In addition, Peugeot's upgrading of its 78-year-old plant in Sochaux, France, is cited as a prime example of "grayfield" rehabilitation.

"PSA has shown a dramatic productivity increase," according to the Euromotor analysis.

The report says Peugeot increased its ratio of cars per year per employee by 64.71 percent to 17.36 cars in the 1982-87 period, while GM improved 35.93 percent to a 15.82 ratio.

Among other full-range manufacturers, Fiat Auto S.p.A., excluding Alfa Romeo, gained 53.80 percent to 15.16 vehicles per employe per annum. Ford of Europe improved 43.44 percent to 14.52 cars; Renault S.A. rose 14.54 percent to 13.96; and Volkswagen AG rose 23.76 percent to 11.06.

BMW AG productivity declined 9.33 percent during the study period to 8.07 cars per employe per year. It was the only company to suffer a decline. But the drop was attributed to the increasing complexity of BMW cars. The figure was still well above Daimler-Benz AG's 5.05 cars and Jaguar plc's 3.84 in 1987.

In 1982 the 12 largest automakers in European countries built an average of 9.27 cars per employee annually. By 1987, the average had risen to 12.30.

The report says overall productivity in the United Kingdom rose 114 percent to 10.27 cars in the five-year period, still below the industry average. Productivity in West Germany gained a modest 4.28 percent to 8.50 cars. But the lower West German figure reflects high volume of high-option-content cars, distorting direct comparisons.

Euromotor concludes that Japanese manufacturers — which according to separate data produced 16.27 vehicles per employee in 1988 — enjoy a healthy advantage over the Europeans in productivity.

The report says Europe will have usable capacity of 13.8 to 14.4 million cars annually by the mid-1990s, or "close to the range of anticipated demand." But it also concludes that increasing use of three-shift operations could boost capacity by two million units annually.

Furthermore, it warns that "new East European ventures, including a commitment by GM to increase (European) capacity by 25 percent, will put additional pressure on the industry's ability to keep capacity in line with demand." GM has said it plans to increase its European capacity from 1.5 million units to two million by the mid-1990s.

The findings also point to a possible "hyperplant" trend in Europe. Such large complexes could produce 400,000 to 500,000 cars per year, double the annual average European auto plant output of 231,662 cars.The report says hyperplants "will be magnets for services and for the operations of suppliers providing just-in-time delivery service."

The findings also point to a possible "hyperplant" trend in Europe. Such large complexes could produce 400,000 to 500,000 cars per year, double the annual average European auto plant output of 231,662 cars.

Ford, Mercury cleanup rebate is $1,000

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

For Ford and Mercury buyers, $1,000 is the magic number in the cleanup rebate derby. Eleven Ford and Mercury 1990 car lines carry that payment in a revised incentive program announced last week.

Nissan Motor Corp. in U.S.A. placed new buyer incentives on pickup trucks and Sentra cars and dealer rebates on pickups and Stanza cars. Hyundai added cut-rate financing to its program.

Chrysler Corp. extended its buyer incentives until Tuesday. They had been been scheduled to expire last Friday.

Ford Motor Co.'s $1,000 rebates cover Ford 1989-90 Escort and 1990 Probe, Mustang, Tempo, Taurus, Thunderbird and Crown Victoria models and Mercury Topaz, Sable, Cougar and Grand Marquis cars. There's also a $750 rebate on 1990 Ford Festiva and 1991 Crown Victoria and $1,000 on 1991 Grand Marquis.

Instead of cash, buyers can choose finance rates of 7.9 percent for contracts up to 48 months and 10.9 percent for 60-month loans. The up-to-48-month rate is 4.8 percent on Taurus, Thunderbird, Sable and Cougar.

Remaining in effect are the previously announced customer rebates of $1,500 on the Lincoln Continental and $2,000 on the Lincoln Mark VII.

All Ford Motor Co. incentives for buyers expire Sept. 26.

Special finance rates on 1991 Ford Escort and Mercury Tracer are being offered through regional programs for a limited time.

Ford extended its incentives to truck buyers through Sept. 26. The program offers a choice of 7.9 percent to 10.9 percent financing or rebates of $600 on the Aerostar, F-series pickup and Econoline Van and Club Wagon, $1,000 on the Ranger and $1,500 on the Bronco and Bronco II.

Ford dealer incentives include $2,000 on the Taurus SHO and $300 on the Crown Victoria. Lincoln dealers pick up $1,500 to $2,500 on the Town Car and $1,000 to $2,000 on the Continental and Mark VII based on the number of units sold. The dealer program also runs through Sept. 26.

Nissan's new plan pays consumers $1,000 on the 1990 Sentra standard model, $1,200 on all other Sentras and $1,000 on all trucks through Oct. 2.

Nissan's dealer incentive program pays $100 to $1,000 on the 1990 Stanza based on the number of units sold through Oct. 2. Until Nov. 2, Nissan is paying dealers $100 to $200 on 1990 and 1991 trucks, based on the number sold.

Hyundai, which has been offering rebates of $500 to $750 on its 1989 and 1990 models, expanded the program to give buyers a choice of taking the cash rebate or financing of 1.0 percent for 24 months, 4.9 percent for 36 months, 7.9 percent for 48 months and 9.9 percent for 60 months. The offer runs through Sept. 4.

Special Correspondent Wes Brown contributed to this report.

SALES

Sales rise in late July

But cars, trucks decline 2% for month

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. and Ford Motor Co. were the only losers among domestic car builders during the last 10 days of July as car and truck sales rose 4.38 percent over 1989.

The crisis in the Mideast, which began in August, had no effect on July 21-31 sales of 374,704 cars and trucks. Car sales rose 0.22 percent; truck sales increased 11.29 percent. The selling period had nine days each year.

Chrysler, which has not had a winning 10-day period since the end of May, suffered most among domestic carmakers in late July. Chrysler's car and truck sales declined 7.42 percent. Sales rose for the Eagle and Chrysler nameplates, but Dodge and Plymouth faltered.

Car sales dipped for both of Ford Motor Co.'s divisions for a combined 12.98 percent drop, the biggest decline for the 10-day period. Ford's 11.73 percent increase in truck sales helped limit the overall sales decline to 2.98 percent.

General Motors reported increases in both car and truck sales for a combined gain of 15.64 percent in the period.

Mazda had the biggest increase

REORGANIZE

FROM PAGE 1

Erdman as marketing vice president for GM of Canada, ending Erdman's 28-year association with GM's sales leader, Chevrolet.

GM seized the opportunity presented by the retirement of its top public relations official to make sweeping changes in its marketing, communications and planning staffs.

Public relations and marketing functions will be joined in a new communications and marketing staff. Product planning, which had been teamed with marketing, now will be joined with GM's economists in a new product planning and economics staff.

The moves surprised observers who had been speculating for months about who would get the job of John McNulty, who retires as vice president of public relations at the end of this month.

GM foiled the prognosticators with moves that left the company without a "public relations" staff and vice president of "public relations" for the first time in 50 years.

The changes realign the responsibilities of the vice presidents reporting to Executive Vice President F. Alan Smith — Marina v.N. Whitman and Charles Katko. Whitman, who was vice president and group executive of the public affairs staffs, now is vice president and group executive of public affairs and marketing. Katko, vice president and group executive of the operating staffs, gets additional duties, but no change in title.

George Eads, formerly vice president of the economics staff, now heads the product planning and economics staff, reporting to Katko.

James Fitzpatrick, formerly vice president of marketing and product planning, now heads the communications and marketing staff, reporting to Whitman. Reporting to Fitzpatrick are:

Quigley

Eads

Guarascio

Fitzpatrick

Barabba

- William Quigley, formerly executive director of corporate communications, now is executive-in-charge of communications. His staff gets most of the activities that reported to McNulty.
- Philip Guarascio, formerly executive director of advertising and strategic merchandising, now is head of marketing programs and advertising. His staff unifies the advertising services functions of the former marketing and product planning staff and the public affairs advertising function that was part of public relations.
- Vincent Barabba, executive director of market research and planning, retains that title but also gets an enhanced strategic market planning function.

The changes in the communications staff are aimed at improving two-way communications between the company and its employees, said spokesman James Crellin.

Joining the product planning and economics activities is a logical move, said Arvid Jouppi, an independent automotive analyst in Detroit. The economists study factors such as fuels availability, energy costs, demographics and debt and wealth distribution, then product planners determine the kinds of vehicles for those conditions, Jouppi said.

"I doubt very much that they (economists and product planners) would have final say in what cars are built," Jouppi said. "They (operate) in the future, before the theoretical goes into hardware."

In announcing the GM Supplier Policy Forum, the company admitted that its relationships with suppliers need improvement.

GM President Lloyd Reuss announced the forum at the University of Michigan Management Briefing in Traverse City, Mich. He said GM wants to be more responsive to supplier concerns and do a better job of balancing the needs of suppliers with GM's needs.

"It'll be a conduit for the input and feedback . . . that we need in our decision making," Reuss told an audience dominated by suppliers.

"It's a positive step toward a new way of doing business. We're encouraged to hear about it," said James Roth, president of the Stamping and Frame Division of Budd Co. in Rochester, Mich., a major GM supplier.

Reuss said GM has not decided how many suppliers will serve on the forum, nor how the representatives will be chosen. The forum will be headed by GM Vice President Donald Pais, head of the materials management staff. The group will work with Reuss "and other GM policymakers," Reuss said.

Another big decision for Reuss and Chevrolet General Manager J.C. Perkins will be the successor to Erdman, 51, the division's general marketing manager since 1988.

Erdman, who has spent his entire GM career at Chevrolet, assumes the GM Canada post held for the past three years by William Atkinson. The move is effective Sept. 1.

Atkinson, 53, is retiring after a 34-year career with GM and plans to buy a GM dealership in the Toronto area.

Erdman joined Chevrolet in 1962 as a clerk in the parts and accessories department after graduating from Xavier University in Cincinnati. He spent 18 years in Chevrolet's field organization, working with dealers.

He moved to the central office in 1981 as sales manager for trucks and progressed through the sales and marketing organization until he was named to his current post in 1988.

Atkinson joined GM of Canada in 1956 as an employee at the former Frigidaire plant in Scarborough, Ontario, plant while he still was a student at General Motors Institute in Flint, Mich. He held sales and marketing positions with GM do Brasil, the corporate staff and with Pontiac and Buick before being named to his current post in 1987.

Automotive News Staff Reporter Laura Clark contributed to this report.

SALES

FROM PAGE 42

among the transplants, up 100 percent. Nissan, which had been experiencing sales declines, saw vehicle sales rise 14.52 percent.

For the month, domestic and import vehicle sales declined 2.04 percent from the July total last year. Domestic car sales were off 1.05 percent. Chrysler, Ford and Nissan registered the only declines among U.S. producers.

Import car sales were down 8.81 percent with only nine of the 39 import makes showing gains. Most of those increases were nominal.

Alfa Romeo's sales climbed to 440 from 225 last July. Volkswagen's sales rose 17.19 percent.

Among the hardest-hit imports were Yugo, off 49.46 percent; Audi, off 41.46 percent and Porsche, down 35.73 percent.

On the domestic side, Chrysler fared the worst in July with a 13.33 percent drop in total sales. Mazda's 98.49 percent jump was the best.

For the first seven months of the year, combined import and domestic vehicle sales dropped 3.28 percent to 8,494,913. The Big 3 carmakers — and Nissan — reported year-to-year sales declines for the first seven months of 1990. Import car sales were down 9.26 percent.

New-car inventories on Aug. 1 were at normal seasonal levels. The combined import and domestic new-car inventory represented a 58-day supply on Aug. 1. For the last seven years, the Aug. 1 average has been a 57-day supply.

Domestic makers had a 56-day supply of new cars on Aug. 1, compared to 62 days on July 1 and 65 days on Aug. 1 last year.

The import supply was 65 days, compared to 70 on July 1 and 67 last Aug. 1.

BRAWL

FROM PAGE 3

through Jeep-Eagle dealers, Beck in his letter tells Iacocca to "take the imports which you personally condemn and stick them up your back side."

Bidwell, in a three-page reply to dealers, claims he "will not personally sit by and let a great American and a lot of dedicated people be demeaned by a tin-horn mudslinger."

"He proceeds to call Mr. Iacocca a liar," Bidwell wrote, disputing Beck's assertions. "I would suggest that Mr. Beck would be better served to look in the mirror for one.

"Let him go peddle his hot-selling Suzukis and Hyundais. We've all got work to do," Bidwell wrote in closing. Beck has franchises for both imports.

In the letter dated July 26 and sent to all dealers in the New Orleans zone, Bidwell said he previously has never intervened "in what appears to be a local issue." Bidwell called his message a "personal letter, not an official Chrysler Corporation letter." It was written on company stationery bearing Bidwell's letterhead as Chrysler Motors chairman.

Beck's letter, dated July 10, was written following the biannual meeting of the National Jeep-Eagle Dealer Council in Detroit in June. Beck says he doesn't know how Bidwell got a copy of the letter.

Beck charged that Chrysler has violated a promise made by Iacocca in 1987 because the company has "badge-engineered" products among the Jeep-Eagle, Chrysler-Plymouth and Dodge franchises. Badge-engineering refers to the practice of giving various divisional badges to the same product.

Specifically, Beck cited Chrysler's decision to sell the Eagle Premier through the Dodge division as the Monaco and also to give Dodge a version of the upcoming ZJ sport-utility, a successor to the Jeep Cherokee.

"Mr. Iacocca flat out right lied to pull the Jeep dealers together when Chrysler bought out Jeep/Renault," Beck said. Citing a 1987 dealer meeting, Beck said, "Mr. Iacocca took the podium in front of a packed auditorium of Jeep dealers and swore there would be no badge engineering of Jeep product."

"Dodge has Premier, called Monaco. The upgrade Cherokee coming next year will be badge engineered. We get a badge engineered two-door Colt," Beck said. "Return Jeep to an exclusive franchise. This is the only way Jeep can survive."

Beck also charged Chrysler has overpriced Jeep-Eagle products, making them non-competitive. "Chrysler Corp. and Mr. Iacocca took the Jeep product line and price increased Jeep-Eagle slap out of the market," Beck said.

In his rebuttal, Bidwell noted Jeep Cherokee sales in 1986 and 1987 averaged just under 110,000 units per year. "In the first two years after Chrysler's acquisition of AMC, they rose to an average of over 150,000 units per year," he said.

"Total AMC car volume in 1987 — eight months AMC, four months Chrysler — was 43,600 units," Bidwell said. "Eagle volume averaged between 65,000 and 70,000 in 1988 and 1989 and will reach 65,000 or better in 1990 in a car market that is off over 500,000 units on an annual rate basis."

> "Mr. Iacocca did not lie on the subject of badge-engineering. Lee said we would not do derivatives of L-car and K-car to try and jump-start the Eagle franchise, and we haven't."
>
> **Bennett Bidwell**

Bidwell also disputed the charge of badge-engineering.

He said the three-door Colt "is being given to Jeep-Eagle at the express request of its dealer council for an entry-level vehicle."

"The new ZJ will not be badge-engineered," Bidwell said. "It will launch first, and will contain many exclusive features."

"Mr. Iacocca did not lie on the subject of badge-engineering. Lee said we would not do derivatives of 'L' car and 'K' car to try and jump-start the Eagle franchise, and we haven't," Bidwell said. "He said we would try and build Eagle from scratch, and we are trying to do that."

Bidwell also said that Eagle is designated to be the lead brand of Chrysler's new 1993 carline, code-named LH.

Product allocation among the three company franchises has been a constant headache for Chrysler since it bought AMC. Chrysler-Plymouth, Dodge and Jeep-Eagle dealers have all fought to maintain divisional product exclusivity. For example, the company currently is embroiled in a battle because Chrysler-Plymouth and Dodge dealers are trying to thwart Jeep-Eagle's demand for a version of the company's popular minivan.

Paul Fournier, chairman of the Jeep-Eagle National Dealer Council, said the issues raised by Beck have been discussed by the council and with Chrysler in forums where the emphasis has been on respect and cooperation. Beck, as New Orleans zone chairman, is a member of the 28-member national dealer council.

"The reason for the council is to have a mutually respectful exchange between the dealers and the company," Fournier said.

"Badge-engineering has always been one of the key issues — if not the key issue. And the council has fought hard for repricing Premier and Cherokee. Any issue is reviewed and discussed by council and then presented to Chrysler.

He added: "The company gives us an opportunity to express ourselves and we give them an opportunity to express themselves."

PRODUCTION

Parts strike threatens GM output

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

A strike at a General Motors components plant threatened to shut at least 10 of the company's 28 U.S. car and truck assembly plants last week. The plant supplies fuel tanks for GM vehicles and doors and grilles for GM trucks.

Members of Local 659 at a Flint, Mich., plant of GM's AC Rochester Division walked out last Wednesday. Grievances include health and safety issues and work practices.

Assembly plants were affected as early as last Thursday. GM, like other automakers, uses the "just-in-time" delivery process to cut inventory and warehousing costs. Any interruptions in parts flow can affect production within days.

GM plants supplied by the strike-bound plant include the Buick City (Flint); Orion Township, Mich.; and Wentzville, Mo., car facilities and seven of GM's 10 truck assembly plants.

GM's Truck & Bus Group closed the Moraine, Ohio, S-truck facility last Thursday, and the Shreveport, La., and Pontiac (Mich.) West plants last Friday. All three plants ran out of fuel tanks. About 6,900 workers were idled.

Last week's estimated production does not reflect GM plant closings due to the AC Rochester strike.

U.S. automakers scheduled 122,968 cars last week, 28.04 percent above the prior week and 14.68 percent above the year-ago week.

So far this year, 3,751,636 cars have been assembled, 12.45 percent below the 1989 total at this point.

Truckmakers planned to build 69,471 units, 4.45 percent below the previous week and 10.91 percent below the year-ago week.

Truck production this year totals 2,480,032 units, down 6.81 percent from last year's total at this time.

Last week's estimated production was shared as follows: General Motors, 39.16 percent; Ford Motor Co., 28.69 percent; Chrysler Corp., 11.26 percent; Honda of America Manufacturing Inc., 7.51 percent; Toyota Motor Manufacturing U.S.A., Inc., 3.59 percent; New United Motor Manufacturing Inc., 3.33 percent; Mazda Motor Manufacturing (USA) Corp., 2.95 percent; Diamond-Star Motors Corp., 2.61 percent; Subaru-Isuzu Automotive Inc., 0.52 percent; and Nissan Motor Manufacturing Inc., 0.38 percent.

Truck assembly jumps in Canada

Canadian automakers estimated output of 13,746 units last week, 0.90 percent above the prior week and 26.83 percent above the year-ago week.

Truckmakers' targeted production of 7,606 units was 66.14 percent above the previous week but was 30.52 percent below the year-ago week. The Chrysler minivan plant in Windsor, Ontario, accounted for the week's upturn.

General Motors' Canadian car and truck facilities are expected to resume output today. All plants were closed for vacation.

Meet the press

Chrysler Motors President Robert Lutz, left, leans on the automaker's new 1991 minivan while Chairman Lee Iacocca, right, fields questions from reporters during introduction ceremonies at the Windsor, Ontario, assembly plant. Iacocca said Chrysler is still negotiating a possible partnership with Italian automaker Fiat, but talks with Renault and Volvo have ended. Story on Page 3.

Redesigned Taurus delayed; fwd set for big Ford cars

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has changed directions on development of a new large-car platform, delaying new versions of Ford's popular Taurus and Sable models until the 1997 or 1998 model year.

In addition to the Taurus and Sable, a new front-wheel-drive platform will be used later in the decade to replace the automaker's big rear-wheel-drive cars — the Ford Crown Victoria, Mercury Grand Marquis, Lincoln Town Car and Mark VII.

Suppliers familiar with the new platform, code-named DEW98, said Ford is concerned about the weight of its older rwd platforms in the face of potentially tougher corporate average fuel economy standards.

"Ford sees itself in a CAFE crunch with its large, rear-wheel-drive platforms in the 1990s," said a high-ranking executive employed by a large vendor.

The DEW98-based Taurus and Sable are now scheduled to debut in the 1997 or 1998 model year, three years later than planned. The platform used for current models will be 11 or 12 years old by the time it is replaced, although the cars will have been reskinned twice.

Luxury cars based on the DEW98 platform, including the Lincoln Continental which is already fwd, will arrive after the new Taurus/Sable, according to suppliers familiar with the project.

As with any long-term project, plans could change with shifts in consumer tastes, company budgets and government regulations on fuel economy.

The new front-wheel-drive platform replaces a flexible car platform program, code-named DFC55, that was conceived in the late 1980s. DFC55 was to be a worldwide platform for both fwd and rwd intermediate and full-sized cars — everything from the Taurus to the Lincoln Town Car including mid-sized vans and Europe's Scorpio.

Under Ford's Centers of Excellence concept, the DFC55 strategy was to be developed by both Ford's North American and European au-

East Germans on car-buying binge

Automakers scramble to establish networks; Golf is top seller

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Automakers are racing to set up dealer networks in East Germany, a market that has been far more robust than expected just a few months ago.

East German new-car buyers are also upsetting conventional wisdom by opting for bigger, more expensive models than had been forecast.

Volkswagen AG, Europe's No. 1 automaker, is leading the way in East Germany. It has signed agreements with 420 VW-Audi dealers and 150 Seat retailers. Every other major European maker either has dealers in operation or is about to appoint them. Most Japanese carmakers have gotten into the act, too, but on a smaller scale.

The companies will be trying to capture a piece of a market that is expected to quickly double in size. Estimates vary, but most projections foresee an East German market of more than 250,000 new cars in 1990, compared with an average of 150,000 annually over the past five years. Some forecasts go as high as 650,000 units by the mid-1990s.

"Demand for new cars in East Germany will more than double by 1995 and double again during the second half of this decade," according to *2001 — A German Vision*, a new report by the British research group Automotive Industry Data Ltd.

The report estimates that East German sales last year were 150,000 units and projects growth to 360,000 in 1995. It predicts that car ownership levels in West and

OUTLOOK: *Dealer profits rise from depths of '89*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

For franchised new-car dealers 1989 was a year to draw up the bridge and wait for the siege to end. The siege hasn't ended yet, but dealership profits this year are up slightly from last year's levels, largely because dealers are better controlling their inventories.

Aug. 1-10 unit sales fall 18%, Page 2

"The profit margin for an average dealership is up to 1.6 percent this year from 1.3 percent for the same time period in 1989," said Tom Webb, chief economist for the National Automobile Dealers Association.

Wear and tear was evident in nearly every aspect of the dealer-

Nothing can be overlooked as dealers are caught in a profit squeeze. Suggestions on how to improve the bottom line are featured in *Insight*, which follows Page 26.

1991 Escort, Tracer get 4.8% loans to spur sales

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is trying to jump start the disappointing launch of its 1991 Ford Escort and Mercury Tracer with 4.8 annual percentage rate loans that range from 12 to 48 months.

Chrysler extends incentives, Page 48

The cut-rate loans on the redesigned 1991 Escorts and Tracers run from Aug. 9 to Sept. 3.

The Local Ford Dealer Advertising Fund groups are promoting the incentives because the programs are short and the groups can tailor programs to individual markets.

The reduced financing program is available nationwide, though in two geographic areas slightly different programs are offered.

Buyers of 1991 Tracers and Escorts in the Boston, New York and Philadelphia districts and southern Delaware have a choice of either low-interest loans or $500 in customer cash. The customer cash program in those areas runs from Aug. 15 to Sept. 3. Dealers in the Seattle district receive $900 in dealer cash for each 1991 Escort sold.

GM

Sales go to the dogs

Middle East fears tip early August dive

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The first 10 days of August were a disaster for domestic carmakers as vehicle sales nosedived 18.38 percent from last year.

Chrysler Corp. Chairman Lee Iacocca, speaking at a press briefing in Windsor, Ontario, last week, said auto sales slumped as economic fears rose on the heels of the Middle East crisis.

"The industry is in the tank," Iacocca said, "the whole industry. Somebody stopped buying something in a hurry in the last 10 days."

Chrysler spokesman Tom Houston said the year-to-year sales comparison also is skewed somewhat because automakers offered heftier consumer incentives at this time last year due to larger inventories. Those heftier incentives stimulated the market. The Aug. 1-10 period had nine selling days this year and last.

A total of 245,785 cars and trucks were sold in early August, with only two companies, Mazda and Toyota, posting gains for the period. Total car sales fell 20.39 percent, truck sales were off 15.02 percent.

Iacocca said it is unclear how long the economic uncertainty will last.

"I hope not more than another two weeks. But that is living in hope. It could last six months. I don't know," he said.

Transplant automaker Nissan, which produces the Sentra in Smyrna, Tenn., suffered the biggest overall drop.

Nissan's car sales declined 33.13 percent, and truck sales fell 34.46 percent for a combined loss of 33.85 percent. Chrysler's combined sales were down 31.08 percent.

Honda, which hasn't experienced a year-to-year sales decline since the final 10 days of April, saw its sales plummet 15.39 percent; Mitsubishi's sales dropped 18.56 percent.

All of General Motors' divisions posted year-to-year sales declines. At Cadillac, only Allante notched a sales increase from last year. Cadillac retail deliveries plunged 41.58 percent. Oldsmobile wasn't far behind with a 41.39 percent drop. Chevrolet, led by Geo Prizm and Lumina, limited its decline down to 7.76 percent, the smallest among any of the domestically-produced car makes.

Ford Motor Co.'s Lincoln brand was up 15.81 percent for the 10-day period, but Ford's overall car sales were down 20.26 percent. Ford continues to have problems with its entry-level Escort car line. Escort sales in early August dove 40.15 percent. Taurus was the only Ford make with increased deliveries; all Mercury nameplates were down.

Mazda's sales, buoyed by its 626 line, skyrocketed 105.83 percent. Toyota's sales rose 64.30 percent.

Truck sales were down across the board. Nissan, again, had the biggest year-to-year decline. Sales of domestically-produced light-duty trucks totaled 95,907 in early August, off 15.02 percent from 112,858 last year.

Chrysler truck sales in early August were off 22.50 percent, GM's were down 18.46 percent and Ford's fell 4.02 percent.

Poll finds gas costs spur drive time cuts

By Scott Hume
CRAIN NEWS SERVICE

Consumers already are cutting down on their driving in response to the sudden surge in gasoline prices, and even more dramatic changes can be expected if gas prices don't come down.

An exclusive survey last week showed the double-digit jump in gas prices that followed the Iraqi invasion of Kuwait could cause much greater reductions in driving in the future. The survey was conducted by the Gallup organization for *Advertising Age*, a sister publication to *Automotive News*.

Nearly one of five adults surveyed (19.4 percent) said they already have reduced their driving since the Middle East crisis began.

If gas pump prices stay at the levels they reached in the past two weeks, the determination to cut back on car travel will substantially increase, the survey shows.

Amid indications that consumers are increasingly pessimistic about the economy and the nation's ability to avoid a recession, the survey shows how quickly economic reversals can trigger changes in consumer behavior.

Already suffering is non-essential travel for discretionary spending. While 12 percent of those surveyed said they have cut travel for entertainment, such as going to films, the theater or sporting events, 38.3 percent say they expect to cut back in this area over the next few months if gas prices remain high.

With the summer winding down, the travel and tourism industry enjoyed some of its heaviest months before the gas crisis hit, and only 8 percent of the sample said it has reduced vacation travel since the Iraqi invasion.

But if gas prices remain at current levels, the share of the audience expecting to cut back on vacation travel jumps to 39.4 percent, including at least one-third of all age groups.

Consumers are worried enough by the situation to rethink travel for social outings. Already, 12.4 percent said they have cut such travel. More than triple, 42.3 percent, expect to cut social travel unless gas prices improve.

Gallup's survey for *Ad Age* was conducted Aug. 15. A random, national selection of 515 persons age 18 or older was interviewed by phone.

Outsourcing sparks threat of strike at 2nd GM plant

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Just as General Motors regroups from a week-long strike at a parts plant in Flint, Mich., it may face a strike in Lordstown, Ohio.

Dave Kimmel, president of UAW Local 1714 which represents 2,650 workers at the GM stamping plant in Lordstown, said 97 percent of the membership there voted to follow Flint if they can't resolve local issues. "It all depends on progress; we're on a week-to-week basis," Kimmel said.

One complaint at Lordstown is outsourcing, the same issue that sent 3,200 workers at Flint's AC Rochester West complex to the picket lines for six days.

The Flint strike was settled Aug. 14 when GM agreed to a five-year pact that guarantees no job losses.

Lordstown's contract expires Sep. 14, the same day that national pacts with GM, Ford Motor Co. and Chrysler Corp. expire.

UAW leadership says outsourcing is a key national issue.

Kimmel said the local has the support of the national union and may issue a five-day notice to strike before the contract expires.

The Lordstown plant provides stampings for the Chevrolet Cavalier, the Pontiac Sunbird and GM's full-sized and compact vans. It also

'92 Lexus uncovered

Toyota will add more fuel to its successful Lexus line in mid-1991 when it introduces a V-8-powered coupe.

Two versions of the car are known to be planned.

- The 1992 SC400, pictured in white, will pack a 4.0-liter, 32-valve V-8, the engine currently used in the LS400 sedan. The front grille and head/fog lamp design on the car pictured here is expected to be slightly restyled for the U.S. version.
- The SC300, captured in dark blue, will be equipped with a 3.0-liter in-line six-cylinder engine and will go on sale some time after the SC400 is introduced, sources say. The front end of the blue test car is highly camouflaged and shows considerable nicks and scratches.

The Lexus coupe is expected to be based on Toyota's redesigned Supra.

— Rick Kranz

GM seat belts under siege

By Greg Bowens and Wes Brown
SPECIAL CORRESPONDENTS

The three-point, non-motorized, door-mounted seat belt system installed on 5.5 million cars built by General Motors is under fire.

The Center for Auto Safety has petitioned the National Highway Traffic Safety Administration to investigate the system, which has been in use since the 1987 model year on as many as 23 car models.

NHTSA has 120 days to respond to the request. If granted, it will be the third time in less than a year the administration has investigated GM's passive restraint system. The initial probes involved reports of the belts breaking during impact.

The new request focuses on allegations that the belt does not securely hold occupants inside a vehicle involved in an accident where doors open, allowing occupants to be thrown from the car.

In a letter to NHTSA Administrator Jerry R. Curry, center executive director Clarence Ditlow said he had received reports of eight accidents resulting in four deaths and five injures involving GM cars with door mounted belts.

GM said all of its cars' belts and door latches meet or exceed federal requirements. GM spokesman W. Grey Terry said the problem of doors opening in an accident can be minimized by locking them as the owner's manual advises.

Canada's Ministry of Transportation also is investigating the GM restraint system, according to Murray Dancer, a ministry occupant protection specialist.

Correction

Horsepower ratings in an Aug. 13 article on the Acura NSX were transposed. The manual transmission version has 270 hp; the automatic has 252.

Wary Navistar trims build, shuns Mack

By Joseph Bohn
TRUCK EDITOR

Navistar International Corp. reported a modest $6 million profit in its fiscal third quarter ended July 31, but has lowered its forecast of North American medium- and heavy-truck sales.

The company plans production cutbacks, and its interest in acquiring Mack Trucks has waned.

Navistar's $6 million profit for its third quarter ended July 31 was down 78.57 percent from $26 million last year.

Navistar reported a net loss of $4 million for the first nine months of fiscal 1990 July 31, compared to a $100 million profit a year ago.

The company lowered its forecast of North American medium-duty retail sales for fiscal 1990 to 150,000 units, 3,000 fewer then previously forecast — and 5.66 percent below the 159,000 sold in fiscal 1989.

It now also projects heavy Class 8 truck retail sales demand at 140,000 units, 2,000 units less than than before, and 18.60 percent below the 172,000 of a year ago.

Navistar shut its Springfield, Ohio, and Chatham, Ontario, plants for five days last year for inventory adjustment.

It plans to shut Chatham for an additional 10 days in September. Springfield's medium-duty assembly line will be shut for five days in October.

Schedules at Chatham also will

Porsche gives 944 Tiptronic automatic to boost U.S. appeal

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, West Germany — In a critical marketing move for the United States, Porsche AG will introduce its innovative new Tiptronic automatic transmission on the 944 range for the 1992 model year.

The racing-derived Tiptronic, which was introduced on the 911 Carrera 2 last year, permits automatic or clutchless manual shifting.

Porsche ups output at factory, Page 24

Hans Halbach, Porsche's executive vice president for sales and marketing, called the lack of an automatic on the 944 convertible "a major problem."

Its arrival will give an additional boost to Porsche in the United States, where buyers tend to favor automatics. After three years in decline, Porsche's U.S. sales are rising this year.

The sinking U.S. dollar restrains short-term prospects for the parent company. But because less than 30 percent of its sales come from the U.S. market, the company is far less vulnerable to currency shifts than it once was.

The lack of an automatic on the Porsche 944 has hindered U.S. sales, Hans Halbach says.

Halbach said the lack of an auto-

Chrysler limits partner talks to Fiat

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. apparently is pursuing wide-ranging talks only with Italy's Fiat Auto S.p.A. as it seeks a partner for a global alliance.

It was widely reported last week that Chrysler is also talking to Volvo AB and Regie Nationale des Usines Renault S.A. But the company has appeared to signal that those discussions have ended.

Clarifying comments made by Chrysler Chairman Lee Iacocca to reporters in Windsor, Ontario, last week, the company indicated that talks only with Fiat are ongoing.

Chrysler said its discussions with Fiat include "a variety of possible business combinations between the two companies as well as possible commercial arrangements."

When asked if the talks might include Fiat purchasing an equity stake in Chrysler or a distribution agreement between the two companies, a Chrysler spokesman said, "Nothing is being ruled out."

AUTOMOTIVE NEWS JOE WILSSENS

Chrysler's minivan will become a product "staple" in Europe within five years as the market rapidly expands, Chairman Lee Iacocca predicted.

Chrysler issued the statement after a press briefing in which Iacocca appeared to rule out the possibility that a foreign company would buy a stake in Chrysler.

The company statement described Chrysler's talks with Volvo and Renault in the past tense.

While speculation about a Chrysler-Fiat link-up has persisted throughout the summer the nature of the discussions is unknown.

Scenarios range from the possibility of Fiat taking an equity stake in Chrysler to the two automakers making distribution and product-development agreements in North America and Europe.

In June Chrysler terminated a $500 million, 50/50 joint venture with Renault to produce and distribute a sport-utility code-named JJ, fueling speculation it would seek a new European partner.

Iacocca's comments were made at a ceremony at Chrysler's Windsor assembly plant marking the launch of its 1991 minivans.

German makers look for ways to soften blow of dollar's plunge

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The 20 percent fall in the value of the dollar against the German mark in the past 11 months has intensified pressure on West German carmakers exporting to the United States.

The dollar hit a post-World War II low of 1.56 marks last week. The development has prompted speculation about how German companies might limit exposure in the United States short of withdrawal — an option companies and industry analysts clearly rule out.

"They aren't going to pack up and come out," said West German specialist Stephen Reitman of UBS Phillips & Drew in London. "But this does actually hurt them quite considerably."

The exchange rate could have an important effect on the 1990 earnings of Daimler-Benz AG, Volkswagen AG and to a lesser extent BMW AG. Porsche AG bore the brunt of U.S. overexposure three years ago. With a much lower dependency on the United States today, it is seeing global profits rise.

Reitman projects declining net earnings per share this year for both Daimler and VW, with the dollar a major reason. He said BMW is still offsetting the currency situation with improving efficiency at home and a richer model mix.

"The dollar's continued fall obviously puts extreme pressure on the German carmakers in the U.S.," said Edmund Chew of DRI Europe in Frankfurt. "The Japanese luxury carmakers are already putting considerable price pressure on them."

Lawson said every 10 pfennig (6.2 cents) drop in the dollar is equal to a 90 million mark ($57 million) penalty in net profits for VW. According to Reitman, the impact on Daimler's bottom line translates to about 30 million marks ($19 million) in profits for every one cent movement in the exchange rate.

> "The dollar's continued fall obviously puts extreme pressure on the German carmakers in the United States."
>
> **Edmund Chew**
> DRI Europe

Analysts say European makers have been shielded from the exchange rate movement during most of the past year by having purchased forward contracts for dollars in 1989 at a higher rate. But the sharp decline over the last year means that those positions are gradually expiring — exposing the Germans' U.S. operations to much lower dollar rates.

Companies can lessen exchange rate losses by buying several months' worth of foreign currency when rates are more favorable. The system is widely referred to as hedging. Such reserves can be used by importers to pay for goods when the producing country's currency increases in value.

Reitman said those hedging positions are now "unwinding."

But analysts agree that BMW and Mercedes, each with about 15

U.S.-built Accord still an 'import' despite content shift

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Even though Honda's U.S.-built 1991 Accords will have enough North American content to qualify as "domestic" cars, the Accord line will still be classified as "imports" under U.S. fuel economy rules.

The Accords will keep the import label because under EPA rules, a car's status as an import or domestic model is determined by averaging the "domestic content" of all Accords sold in the United States, whether imported or built here.

Automotive News erroneously reported in its April 2 and Aug. 6 issues that U.S.-built 1991 Accords would be counted in a separate domestic fleet because they will reach the 75 percent North American content level this fall. The reports were based on information provided by the EPA's Certification Division in Ann Arbor, Mich.

Under U.S. fuel economy rules, automakers' car fleets fall into "domestic" and "import" categories. The designation depends on how much North American content the cars carry, not where they are built. Both groups must average 27.5 mpg.

Until this year, U.S.-built Hondas and Hondas shipped from Japan were counted as imports because each had less than 75 percent North American content. It appeared that by crossing the 75 percent threshold, the Accord would become the first Japanese-badged model to fall into the domestic category.

A reclassification would have been significant because the Accord — at least the 1990 version — averaged less than 27.5 mpg. If it were alone in a new Honda "domestic" fleet, its CAFE rating could not have been offset by other, more fuel-efficient Hondas.

Officials at Honda and the EPA admit their own staffs have had trouble grasping the rules. And the Association of International Automobile Manufacturers (formerly Automobile Importers of America) has asked the EPA for a clarification on some points.

The issue will become more pertinent as other Japanese automakers cross the 75 percent domestic content mark in coming years. They include the Nissan Sentra, built in Smyrna, Tenn.; Toyota Camry, built in Georgetown, Ky.; Toyota Corolla, made in Fremont, Calif.; and Subaru Legacy, made in Lafayette, Ind.

The Accord's coupe and sedan versions will be the first to hit the 75 percent mark. Later in the 1991 model year, the new Accord wagon will qualify. The four-door Civic will reach the mark in the 1992 model year.

But the Accord's domestic content for CAFE purposes will be determined by averaging all Accord models sold in the United States. Honda is on track to build more than 300,000 U.S. Accords this year; approximately 125,000 are shipped from Japan annually with minimal North American content.

EPA policy does allow Honda to petition if it wants to count the Marysville cars as domestic.

The addition of an Accord station wagon this year raised another question for the manufacturer. For most purposes, wagons are treated separately from the rest of a car line by the EPA. It will not be imported from Japan.

George Nield, president of the Association of International Automobile Manufacturers, asked EPA last year for a clarification. Nield was told by Richard Wilson, director of the office of mobile sources, that "the EPA agrees that station wagons are to be included with their related car lines for purposes of determining domestic content."

SERVICE MANAGEMENT

Ford offers dealers tools to boost service capacity

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich — The lack of dealership service capacity is a widespread problem that can threaten the wave of hard-gained successes dealers and automakers have been riding in recent years.

To head off this threat, Ford Motor Co.'s Parts and Service Division has developed several tools to help Ford and Lincoln-Mercury dealers identify and deal with service capacity problems.

According to Kenneth W. Myers, parts and service marketing manager for Ford Parts and Service Division, the decline of adequate service capacity at Ford Motor dealerships can be attributed to increased vehicle sales, increased units in operation, longer warranties, continuing growth of Ford's Extended Service Plan, new vehicle technology and a decline in the number of full-service stations and independent service shops.

"All these factors combined with our efforts to get dealers to treat customers better and to build an image as a better service place has created this capacity problem throughout the country by bringing more service business to dealerships," Myers said. "Dealers are getting a larger share of the repair business because vehicle technology has advanced beyond the independents' ability to service.

"Ten years ago or so, service stations could give tuneups on a fuel-injected car, but those vehicles can't be worked on in most stations and independent shops now. Plus, there are half as many service stations today as there were 10 to 12 years ago."

These factors, Myers said, led the division to try to determine how it could make dealers aware that they still may have service problems and what they could do to solve them. Among the signs of trouble in the service department are unacceptable waiting periods for service; long lines for service writeups; loss of "plus-business" (oil changes, front-end work and other jobs that make happy technicians and fat margins); sales to quick service facilities; lack of service salesmanship; employee burnout and turnover; and low and declining Ford Quality Commitment Performance scores.

Kenneth W. Myers: "Dealers are getting a larger share of the repair business because vehicle technology has advanced beyond the independents' ability to service."

To help Ford and individual dealerships identify problem areas in service capacity, the division developed the Service Capacity Analysis Measurement Program, a computer-based system for analyzing service capacity in both individual dealerships and market areas.

The specific evaluation and reports that are available from the measurement program include:

- Dealership's service capacity status and output.
- Projection of a dealership's future capacity requirements — a look ahead at how service capacity may change in relation to potential sales growth.
- Projection of future service capacity status — a look at a dealership's potential ability to provide adequate service capacity under a variety of conditions.
- Evaluation of effects of changes on a dealership's service resources — an analysis of how implementing service-capacity changes may affect a dealership's ability to meet customer service requirements.

To many dealers, according to Ford, the answer to adding service capacity is to build additional service bays. The "brick and mortar solution," the division said, should be the dealer's last resort.

To help dealers evaluate potential solutions that add service capacity without the need for building additional service bays, Ford Parts and Service Division created a helpful manual, *Maxxed Out? Service Capacity Alternative for Increasing Customer Satisfaction.* The publication is based on research conducted with dealers across the country who have successfully increased service capacity.

"The manual is a practical guide to facility alternatives that have worked in a wide range of dealership sizes, labor markets and facilities," Myers said. "Alternatives involve both productivity enhancing improvement programs."

Alternatives covered include:

- Teams systems — ways to reorganize current service employees for increased productivity and responsiveness to customer needs.
- Automated schedule and loading — computer-based methods to increase productivity and efficiency through improved time management and work-flow scheduling.
- Second shifts — how to use a second shift to increase a service department's labor output.
- Extended service hours — innovative approaches to freeing service bays.

Service index up 7% in first half

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Despite a decline in June, new-car dealers' service and parts business for the first half of 1990 recorded a healthy gain over the same period a year ago.

According to the Automotive News Service Index, shop volume in dealerships for the January-June period amounted to 107.0 percent of the business for the same year-earlier period.

June's volume dipped to 99.3 percent of the total recorded in the same year-ago month, marking the dealers' first negative showing of the year.

All five indicators used in the Service Index recorded gains in the first six months of 1990. In June, all indicators, except repair orders written, were below volume achieved in the year-ago month.

SERVICE INDEX
99.3★

	June '90 vs. June '89	Jan.-June '90 vs. Jan.-June '89
Gross Profit on All Labor and P&A Sales	– 1.5%	+ 5.6%
Repair Orders Written	+ 0.7%	+ 0.5%
Total Labor Sales (Customer & Warranty)	– 6.6%	+ 6.7%
Shop Parts Sales (Customer & Warranty)	– 1.9%	+ 6.7%
Sales of All P&A	– 2.8%	+ 7.0%

★ Survey by Automotive News shows that dealers' service and parts business in June 1990 was 99.3 percent of business in June 1989. Service business in the first 6 months of 1990 was 107.0 percent of business in the corresponding period in 1989.

Gross profit on all labor, parts and accessories — the most important indicator to dealers — gained 5.6 percent over the previous six-month period. In June, profits were down 1.5 percent.

Repair orders written were up 0.5 percent for the half year and 0.7 percent for June, while total labor sales (customer-paid and warranty) were up 6.7 percent for the six months and down 6.6 percent for the month.

Shop parts sales (customer-paid and warranty) advanced 6.7 percent for the first half of 1990 and declined 1.9 percent for the month, while sales of parts and accessories climbed 7.0 percent for the January-June period and dipped 2.8 percent for June.

Figures used in the Service Index are compiled from monthly reports on service and parts operations from a cross-section of the nation's new-car dealerships.

Nissan cited for service to college

Jerry Butts, left, vice president of the Parts and Service Division for Nissan Motor Corp. in U.S.A., receives a plaque from Dr. Kim Badrkan, dean of instruction at Long Beach (Calif.) City College, recognizing Nissan's contribution to the college's automotive technology program. Nissan donated a Infiniti Q45 and $6,500 in scholarship funds for students in the program.

Cadillac axes '91 warranty deductibles

DETROIT — Cadillac has eliminated the deductible from the warranties covering its 1991 models.

Cadillac has notified its dealers that the warranty on all Cadillac models, except Allante, will no longer require the $100 deductible for any repair after the 1-year/12,000-mile coverage expires. A similar, $25 deductible also has been eliminated from the Allante warranty.

All other General Motors divisions will continue to charge owners of 1991 vehicles the $100 deductible per repair visit after the 1-year/12,000-mile coverage expires.

SERVICE BRIEFS

APAA offers fair package

LANHAM, Md. — The Automotive Parts and Accessories Association is organizing a U.S. Pavilion at Equip Auto '91 in Paris for manufacturers preparing to have a presence in the European market in the 1990s.

As the largest European automotive trade fair, the Automotive Parts and Accessories Association said Equip Auto features a broad range of products, both original equipment and aftermarket.

The Automotive Parts and Accessories Association offers booth packages for exhibitors in the pavilion that includes 10-by-10-foot booth space, furniture, electrical outlets, directory listings, promotion, and assistance with travel and shipping arrangements for $3,600. For more information, call (301) 459-9110.

Scholarships expanded

CHICAGO — Three additional schools have been invited to join an expanded Automotive Service Industry Association Scholarship Fund Program beginning with the 1990-91 school year.

According to the association, scholarship awards will go to students at Ferris State University, Big Rapids, Mich.; Southern Illinois University, Carbondale, Ill.; and Oklahoma State University Technical Branch, Okmulgee, Okla. The three join Northwood Institute, Midland, Mich., and the University of Southern Colorado, Pueblo, Colo.

The expansion of the 16-year-old fund was made possible by a $330,000 gift by the former Southern Automotive Show directors.

Managers elect Hoffman

AKRON, Ohio — The Automotive Training Managers Council has elected William F. Hoffman, principal program designer of the Sales Training Division for Goodyear Tire & Rubber Co., to succeed Janine M. Sine of TRW Inc. as its president.

SEMA picks Ford truck

DIAMOND BAR, Calif. — The Ford F-150 pickup has been selected as the official truck of the 1990 Specialty Equipment Market Association/Auto International Show scheduled for Las Vegas Oct. 9-12.

The joint announcement was made by Charles R. Blum, Specialty Equipment Market Association president, and Jerry Green, special events manager, Ford Special Vehicle Operations. The F-150 will be customized during the show and will be the grand prize in a raffle benefitting the Specialty Equipment Market Association Scholarship Fund and Automotive Foundation for the Aftermarket.

General adds to test area

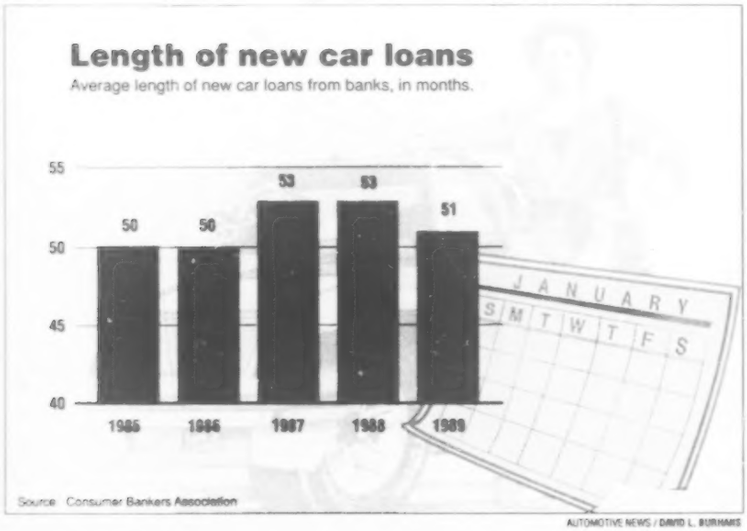
UVALDE, Texas — General Tire Inc. has expanded the testing capabilities at its 5,000-acre proving ground here by adding a vehicle dynamics area.

The new area consists of two courses — one for wet handling and one for dry handling. The wet course is nearly 15 acres, while the dry handling pad is a 1.1-mile course full of curves, turns and bends.

Lead levels decline

NORTHBROOK, Ill. — Occupational exposure to dangerous levels of lead within the radiator repair industry is on the decline, according to the "Radiator Reporter," an industry newsletter published by the Consulting Service Division of Runzheimer International.

Average blood lead levels of people in the radiator industry peaked at 47 micrograms per deciliter in 1982 and have declined ever since to the 1990 level of 32 micrograms per deciliter.



BANK LOANS FOR NEW CARS SHORTER IN 1989

The average new-car bank loan dropped to 51 months last year from the 53 months it stood at in 1988 and 1987, says the Consumer Bankers Association.

Recent figures from the Arlington, Va., group indicate the overall maximum length offered for new loans in 1989 also was shorter, 63 months compared with 65 months in 1988.

The average portfolio turnover was 38 months for new cars, compared to 32 months in 1988, says the association.

In 1989, 59 percent of all loans were paid off early, compared with 61 percent in 1988.

The association found there was little change in the overall approval rate in 1989; it was at 56 percent compared with 57 percent in 1988 and 59 percent in 1987.

The average percentage of loans 31 to 59 days late in 1989 increased to 1.61 percent from 1.31 percent a year before, the consumer banking group's study showed.

The study found the average lease approval rate was 58 percent, a decrease from 1988's 62 percent average rate.

The length of the average new lease has extended in recent years. In 1989, the average open-end lease was 48 months, while the average closed-end lease was 50 months.

Average turnover for the total portfolio, says the association, remained constant at 37.2 months last year. In 1989, the figure was 35 percent for all leases terminated early, compared to 30 percent in 1988 and 27 percent in 1987.

The average open-end lease portfolio held by lessors was approximately one-third as large as the average closed-end portfolio, at 1,917 vehicles and 6,409 vehicles respectively.

Indirect lending is becoming the norm for banks, according to the association's researchers, who surveyed institutions with average portfolios of 10,315 direct auto loans and 32,030 indirect loans.

Direct loans are those made with the car buyer going directly to the bank. Indirect loans are made through the dealer. It is felt indirect lending is increasing because it is the more convenient of the two techniques.

The overall average of direct loans in the portfolio continued to increase to 34 percent at year-end 1989 from 28 percent in 1988 and 31 percent in 1987. There was an average 9 percent increase in the size of indirect loans made.

The Consumer Banking Association, founded in 1919, represents about 800 federally insured banks and thrift institutions that hold about 80 percent of all consumer deposits and close to 70 percent of all consumer credit held by federally insured depository institutions.

MICHIGAN PROMOTES BATTERY RECYCLING WITH DEPOSITS

Disposal of dead batteries has long been a headache for service managers. The tough, heavy items of lead, plastic, rubber and acid present an ugly picture as they aren't picked up frequently by scavengers.

Now, however, 23 states, two counties and some cities have specific battery recycling laws and 14 states have legislation under consideration.

One of the most recent movers, Michigan, has legislation in effect that regulates the disposal of out-of-action lead-acid batteries.

The law, which became effective last April, carries a stipulation for a $6 deposit which does not go into effect until January 1993.

The law makes it illegal to dispose of spent lead-acid batteries except to automotive wholesalers, secondary lead smelters or state-authorized collection or recycling facilities.

Battery distributors are required to accept spent batteries from retailers in a quantity at least equal to the number of new lead-acid batteries sold by the distributor to the retailer. Distributors must move the old batteries from the point of collection within 90 days of receiving them.

Johnson Controls of Milwaukee, the big battery maker, says after Jan. 1, 1993, Michigan retailers either have to take a $6 deposit on each battery sold or to collect a used battery. The customer will be given a voucher for the $6 and can convert that into cash later by bringing an old battery to the retailer or a recycler or smelter.

Things are much tougher under the law in Suffolk County, N.Y., where retailers have to collect — at the time of purchase — two batteries similar in design to the one sold.

GM BREAKS UP BRAKE BUSINESS AS USE OF ABS EXPANDS

There are major changes being made in how General Motors' car and truck antilock brake systems are made and in who makes them.

Saturn, Pontiac, Oldsmobile and Buick dealers this fall, for example, will sell small cars equipped with a radically different anti-lock braking system with electric motors that control brake pressure.

The ABS-VI system, from General Motors' Delco Moraine NDH division, is key to General Motors' plans to install ABS as standard equipment on all cars and light trucks GM sells in North America by the 1994 model year.

The ABS-VI technology is much less expensive to build than conventional ABS — reportedly $250 per vehicle for ABS-VI, compared to $900 to $1,200 for most currently marketed systems.

Robert Bosch Corp., ITT Teves Co. and Kelsey-Hayes Co. have secured the antilock brake business on General Motors car and light truck platforms not captured by Delco Moraine NDH .

Bosch and Teves will experience major increases in volume in the 1991 model year as ABS becomes standard equipment on the platforms they supply.

Next model year is when three suppliers will divide the ABS business on the remainder of GM's cars and light trucks — with all of their systems becoming standard equipment in 1991.

The two suppliers this year begin providing GM with less costly add-on systems which get power from engine vacuum. They had been supplying costly integrated systems which derived power boost from a hydraulic pump.

Bosch has been supplying the ABS for the Chevrolet Corvette and B-platform Caprice, along with the Cadillac Allante and Brougham. Bosch's new business at GM begins to come on line in 1991 with remaining B platform cars — Caprice Wagon, Olds Custom Cruiser Wagon, and Buick's Electra and LeSabre wagons. Bosch also gets the 1992 B-platform Buick Roadmaster.

Also in 1991, the E-K platform changes from a Teves integrated system to a Bosch add-on unit, while the Cadillacs built off the C platform make the same switch.

Teves keeps the Buick Reatta, H platform cars and the non-Cadillac C-cars, and gains additional volume because its new add-on system will be standard on those vehicles.

Kelsey already supplies standard ABS on nearly all of GM's light trucks, although most of those systems are for the rear wheels only.

The M vans got Kelsey's four-wheel ABS standard in 1990, and the supplier will have all of its rear-wheel business at GM go to four-wheel by 1994.

The APVs, which debuted in 1990 without ABS, are the only light trucks that Kelsey will not supply at GM.

CAR CARRIER COULD REDUCE IN-TRANSIT DAMAGE

Railroads, truckers and the car and truck makers keep right on plugging away at the problems of in-transit damage to increasingly costly vehicles.

Among the latest efforts to cure the headache that's been with the industry virtually since Day One is a SMART rail car prototype being tested by the Union Pacific Railroad.

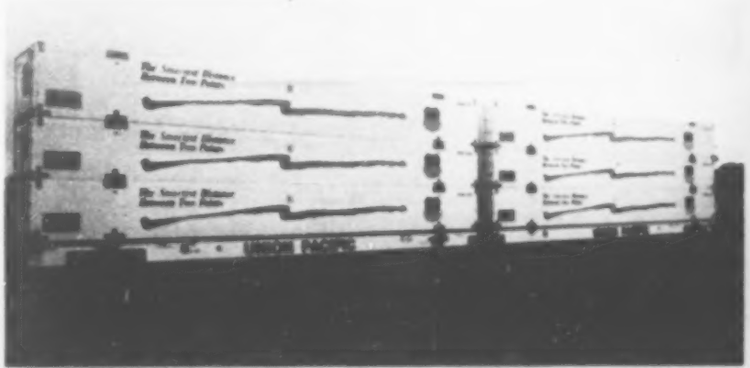
The car is a double-stack or triple-stack air tight container system made of composite modules riding on a two-unit articulated spine car. The modules are 53 feet long and 102 inches wide.

In this configuration, the overall rail car length is 110 feet with a deck height of 38 inches. Usually, car-carriers are fabricated steel racks attached to intermodal flatcars.

"The smart car developed by the UP was designed to be a new and total system for transporting automobiles," says Rex A. Peck, freight car manager for the big rail line.

"We wanted to offer the auto industry a flexible auto carrier which could respond to varying market demands without requiring major modification or equipment idling. We also wanted it to anticipate the future needs of door-to-door transportation," says Peck.

The car is designed to travel safely at speeds up to 80 mph. And, says Peck, the SMART car offers superior reliability, stability, suspension response and tie-down performance. Vehicles being transported are less accessible to vandals, thieves and unauthorized riders. "This means the vehicles arrive at their destinations in excellent condition," says Peck.



Union Pacific's SMART rail car uses air-tight containers to protect vehicles from being damaged in transit.

JOE WILSSENS

Geo vehicles have been an important addition to the product line at James Chevrolet in Mt. Clemens, Mich. The dealership ranked second in the state for sales in July, according to Brisk Storm and Tracker research.

Profit Motive

Sluggish sales are squeezing profits even tighter. Most see a rebound soon, but cost-cutting remains a top priority

AVERAGE DEALER PROFILE

	YTD March 1990	YTD March 1989	Percent Change

SOURCE: NADA

Editor's note: NADA's Optimism Survey discussed here was conducted prior to the outbreak of hostilities in the Middle East. The association's chief economist, Tom Webb, says it would be difficult to quantify the conflict's dampening effect on dealer attitudes, but believes it would be substantial. The survey is part of NADA's quarterly financial survey of dealers. Another survey report is expected in October.

Despite a sluggish market, auto dealers of all franchises registered an upward blip in optimism regarding the outlook for profit and sales in the last half of this year.

The National Automobile Dealers Association optimism index, based on a quarterly survey of membership, shows 33 percent of dealers expect profits to rise in the last half of 1990.

That represents a 3 percent jump from January 1990, and the third consecutive increase in as many quarters.

The survey measures dealer attitudes on profitability and the state of the economy.

Holding steady from January 1990, 46 percent of the dealers polled anticipate no major change in the profit and sales picture, while 21 percent foresee a decline.

The majority of dealers see only a marginal improvement in bottom-line profits.

For the first time in two years, the NADA survey shows dealers selling General Motors cars and trucks are as optimistic as import dealers. Thirty-five percent of all GM and import dealers anticipate improved profits.

In contrast, only 31 percent of Ford Motor Co. dealers and 29 percent of Chrysler Corp. dealers expect profits to improve.

The nation's large-volume franchised dealers voiced greater optimism than smaller dealers — 35 percent versus 29 percent — "reflecting their ability to bounce back more quickly after setbacks," according to the survey.

Despite somewhat increased optimism about their own businesses, only 10 percent of dealers surveyed expect the nation's economy to improve, while 25 percent look for a bleaker economic climate in the remainder of this year.

NADA Chief Economist Tom Webb expects the economy will have bottomed out in the second quarter of 1990, as the full effects of a depressed housing market, stagnation in the job market and retrenchment in retail sales hit.

According to Webb, job growth has stalled, the service sector cannot handle automaker layoffs and consumers are continuing to spend cautiously, fostering retail sales declines.

Meanwhile, the latest annual figures on dealer

JOE WILSSENS

Recently remodeled from walls to tile floor, the showroom of Galen Boyer Pontiac-Cadillac in Independence, Mo., represents what Pontiac sees as the marketplace design of the 1990s.

advertising expenditures — released last month — reflect the somber mood of auto retailers over the past year.

Advertising expense at the average new-car dealership in 1989 went down for the first time in 14 years, according to NADA.

Despite the drop, however, the average new-car dealership still spent $154,000 in advertising in 1989, or 25 percent more than the average dealership earned in the new-car sales department for the year.

The slowdown in new-car sales and the squeeze on dealer profits are cited by NADA analysts as the reasons for the end to the 15.5 percent annual growth rate in dealership advertising costs experienced during the last 13 years.

The auto sales slump and profit squeeze also reduced 1989 pre-tax profits to 1 percent for the average new-car dealership.

The breakdown in 1989 dealership advertising expenses shows that newspapers absorbed 56 percent of total advertising costs, an increase of 2 percent compared to 1988.

Radio's share of the budget dropped 2 points in 1989 to 17 percent. Television advertising's share slipped 1 point to 15 percent.

Advertising expense in 1989, however, still represented the third-highest level ever reached, as dealers spent an average of $261 per vehicle unit on advertising in 1989, according to NADA.

While some dealers blame ad associations for the boost in ad costs, an NADA survey shows that only 19 percent of all dealers transfer ad association fees on vehicle invoices to their advertising accounts.

Webb says a more likely explanation is ad dollars versus profits. Ad dollars tend to rise with dealership profits, but as profits reached record levels in the mid-1980s, ad spending surged. Between 1983 and 1987 ad outlays increased 21 percent annually.

According to Webb, the decline in 1989 is a realignment by dealers to bring ad costs back in line, a development which likely indicates an era of cautious ad spending.

Ray Green, NADA president, noting the tremendous advertising clutter in all media today, said, "Dealers will continue to place tighter controls on advertising expenditures to offset weak profits.

"Today's dealers remain skeptical about the effectiveness of all advertising, such as ad association advertising, that dilutes the individual dealer's message to potential customers," Green said.

NADA's average dealership saw a 43 percent increase in its bottom line in the first quarter of 1990 as dealers cut inventory expenses, boosted used-car sales, and improved efficiencies and sales in their service and parts operations.

The average dealership also saw its nonfloorplan debt-to-equity ratio increase to 1.02, the highest in seven years.

While not too alarming, NADA notes, reports of shaky dealerships are on the rise.

The continuing problem is lack of profit in new vehicles, according to NADA. Through the first quarter of 1990, the loss was 1.7 cents for every dollar of sales, the association said.

However, finance and insurance departments came to the rescue, turning the loss into a gain of 32 cents on every $100 of sales.

According to NADA, the used-car department is 2 percent ahead of last year in comparing first quarters, but the service department finished in the red, even though it beat 1989's first quarter profits by 20 percent. □

Is your competition making a PROFIT you're missing?

The trouble with most tire brands is that they are carried by almost every automotive service outlet you can name — tire stores, service stations, discount chains, repair shops, etc. And more often than not the tires are "on sale."

You don't face this kind of competition with Vogue Tyres,® however, because they're sold by new car dealers who emphasize Vogue's premium quality and superior performance.

What's more, Vogue brings the customer back to your dealership for tyre servicing (and for other automotive sales and servicing opportunities). So don't miss the additional profit you could be making with Vogue Tyres.®

We would be pleased to send you information without obligation on how you can profit from Vogue's Dealer Program. Write or phone Mr. Garry Goyak at Vogue Tyre and Rubber Company, 4801 West Golf Road, Skokie, IL 60077. 1-800-323-1466 Or on the West Coast, Mr. Hasan Truemen, Prestige Products Corporation, 1323 S. Flower Street, Los Angeles, CA 90015. 1-800-227-8635 Western States 1-800-248-6483.

Since 1914, the leader in luxury car tyres

For more than seventy years Vogue has led the industry in innovations for improving automobile tyre quality, appearance, and performance. From the time Vogue introduced the premium whitewall to the present, Vogue's standards of uncomprised craftsmanship have set the pattern in building fine tyres.

Vogue Tyre® also carries a complete line of custom wheels, custom grilles, custom tops, gold treatments, radar detectors, and other special products for your needs.

Geo ground effects

Pacific Auto Accessories, Huntington Beach, Calif., has created a ground effects styling package and spoiler for the Geo Storm coupe. The ground effects package consists of a front air dam, side skirts and rear lower wrap around skirt. The retail price for the ground effects package is $473; the spoiler is $176.

Upstart Lexus charges past M-B in July

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Lexus outsold Mercedes-Benz for the first time in July, which was generally an off month for import car sales.

Imports fell about 11.1 percent in July to 213,047 units, slightly worse than the year-to-date import pace, which was off 9.8 percent for seven months to 1.49 million.

Japanese imports declined 10.0 percent in July. Honda Motor Co. was down 9.7 percent to 23,876 units and Nissan Motor Co. declined 16.6 percent to 27,530. Toyota Motor Corp. imports rose less than 1 percent to 35,519.

For the year-to-date period, only Honda imports showed an increase, up 4.2 percent to 148,166 units. But declining imports from Japan are being supplanted by Japanese transplants in the United States. Honda's biggest import, the Accord, was up 6.7 percent for the year to 83,163, but down 13.0 percent for the month to 15,133.

Lexus, the new luxury division of Toyota Motor Sales USA Inc., outsold Mercedes-Benz of North America Inc. in July by 312 cars, with monthly sales of 5,596 units. Lexus also outstripped BMW of North America Inc., which sold 4,709 cars in July, marking the fourth month Lexus has outsold BMW. Among Lexus, BMW and Mercedes, the best-selling model was the Lexus LS 400.

Lexus still trails the two German heavyweights for the year-to-date, but BMW was down 6.2 percent for the month and down 9.2 percent for seven months. Mercedes, which had been up close to 3 percent after six months, fell 17.5 percent in July and is now just below break-even.

Overall, European imports fell 12.3 percent for the month to 43,835, or 13.1 percent for the seven months to 295,279.

Mitsubishi Motors Corp. posted gains for the month and for the year-to-date period. July sales of 4,859 were up 15.7 percent, compared with the year-ago month.

National lemon law model sours state lawmakers

By Helen Kahn
SENIOR CORRESPONDENT

A model lemon law for the nation has been rendered comatose.

The National Conference of State Legislatures shelved a final draft of the measure at its annual meeting held earlier this month in Nashville, Tenn.

Drafters had designed the model law for states looking to upgrade existing lemon laws. The draft represented a compromise between industry interests and consumer interests and was designed to avoid bloodletting from automakers, dealers and consumer groups. It is similar to lemon laws in Florida and Washington.

But the National Conference of State Legislatures apparently thought the model bill was not even worth a vote. One possible reason is that only two states — Arkansas and South Dakota — do not already have lemon laws.

Approval of the measure basically would have amounted to an endorsement. Drafters still hope that the more than 30 states that have first-generation lemon laws will consider the model when drafting second generation legislation, especially because adoption of the whole bill should thwart opposition from both industry and consumer groups.

The push for a model lemon law came two years ago at the urging of State Rep. John Woodcock III, a Connecticut lawmaker.

The conference was willing to talk to automakers and consider such a model law in order to improve uniformity among state laws. It took the position even though it vigorously opposed federal preemption of state lemon laws, either with a federal law or by the Federal Trade Commission's regulation of arbitration procedures.

Even after Woodcock was defeated in the 1988 election for the Connecticut legislature, the National Conference of State Legislatures project continued and was eventually joined by lawyers from General Motors and Ford.

No participation was asked or given from the import companies, according to the International Automobile Manufacturers Association. The association had earlier produced its own model lemon law, which was ferociously attacked by consumer groups and later quietly shelved.

All five drafters were veterans of the 18-month impasse between consumer activists and industry representatives who tried to work with professional negotiators to develop a compromise on the commission's procedural rules.

The work was done by Philip Nowicki, a lemon law expert who is now administrator of Florida's lemon law; Evan Johnson, formerly with the Center for Auto Safety and now with the office of consumer affairs in Montgomery County, Md.; David Collins, a lemon law specialist at General Motors; and Lassie Waldern, a lemon law specialist at Ford Motor Co. Pete Kitzmiller, an attorney with the National Automobile Dealers Association, took part to ensure that dealers would escape liability so long as they followed manufacturer's instructions.

N.Y. dispute may go to Supreme Court

The auto industry has asked the U.S. Supreme Court to decide whether federal rules preempt state lemon laws that impose certain requirements that go beyond those covered under U.S. regulations.

In particular, the industry wants a decision on whether New York may stop automakers from operating their own more limited arbitration programs.

In March, a federal court of appeals upheld the New York lemon law's mandates that automakers' informal mechanisms for settling disputes must include oral hearings, trained arbitrators and more written records.

The court said the fact that the 1975 Magnuson-Moss Warranty Act told the Federal Trade Commission to set "minimum" requirements for automakers' arbitration programs means Congress intended state laws to supplement, but not supplant, the automakers' informal dispute settlement mechanisms.

The federal appellate decision reversed an earlier lower court opinion finding that the state's extra requirements were banned because they were preempted by the Magnuson Moss law and Rule 703.

That ruling was identical to the makers' position and the one they are now trying to get confirmed by the U.S. Supreme Court.

Used-car lemon law aids N.Y. buyers

By Helen Kahn
SENIOR CORRESPONDENT

The first seven months of New York's used-car lemon law arbitration program have produced more than $330,000 in refunds to consumers, according to State Attorney General Robert Abrams.

In 54 of the 77 cases decided so far under the new law, which became effective Jan. 1, settlements have favored consumers. Forty-one individuals have been awarded a total of $308,127, or an average of $7,515 per complaint. The remaining 13 consumers made settlements worth a total of more than than $25,000.

The used-car lemon law created an independent arbitration program that enabled buyers to seek restitution if a serious flaw developed within a certain time. It applies to purchases from new- and used-car dealers.

Abrams also noted that the latest figures show the state's new car lemon program, over its seven years of operation, has returned more than $60 million in cash refunds or replacement cars to more than 4,300 consumers. He added the law has been improved significantly and successfully, defended against "repeated legal challenges by the auto industry."

The American Arbitration Association has won a two-year renewal of its contract for administering the arbitration program for both new and used "lemons."

After Jan. 1, 1991, the filing fee for the new-car program will rise from $200 to $225. The fee for the used-car lemon arbitration will stay at $100 for the next two years. Filing fees for both programs are refundable if the consumer is successful.

A change in the law, to take effect Jan. 20, 1991, extends coverage on used vehicles. Those with less than 36,000 miles at the time of sale are covered for 90 days/4,000 miles, whichever comes first; 36,000-80,000 miles, 60 days/3,000 miles; and 80,000-100,000 miles, 10 days/1,000 miles.

Japanese makers fare well in Connecticut 'lemon' tally

By Helen Kahn
SENIOR CORRESPONDENT

A Connecticut report indicates that when it comes to lemon law grievances, it's not "Advantage Chrysler," as the ads say, but "Advantage Toyota."

Toyota accounted for only 0.70 percent of the lemon law cases eligible for arbitration in the state in 1989, well below what might be expected for a company that had 7.0 percent share of the state's vehicle market in 1989. Toyota and three other Japanese nameplates — Honda, Nissan and Mazda — had market shares well above their percentage of cases eligible for arbitration.

Each of the Big 3 brands, in contrast, claimed a higher percentage of arbitration cases than their market share would warrant.

A total of 141 complaints were eligible for arbitration during the first half of 1989. The cases kick in when defects are not corrected after four or more repair attempts for the same problem or after 30 days of repair services for any number of problems.

Nameplates with no cases eligible for arbitration included: Audi, Acura, Hyundai, Mercedes-Benz, Peugeot, Subaru, and Suzuki.

ARBITRATION ELIGIBILITY FOR CONN. 'LEMONS'

Manufacturer	'89 market share	Pct. of total cases eligible for arbitration
General Motors	30.0	35.0
Ford	21.0	28.0
Chrysler	15.0	21.0
Honda	7.7	1.5
Toyota	7.0	0.7
Nissan	3.3	1.4
Mazda	2.7	2.1

Twenty years ago, Ford Electronics stood for Philco refrigerators, washers and stereos and a smattering of electrical components for Ford cars and trucks. It was the detour division for executives who did not make the corporate grade.

Today, Ford Electronics is a hot bed of technology and the fastest growing Ford division. Ford's electronic business has grown from sales of $450 million in 1984 to $2.1 billion in 1989, half the $4 billion posted by General Motors' Delco Electronics in 1989.

In response to that growth, the corporation has allowed the division to build six new plants and a new engineering center in the last six years, at the same time other divisions were restrained to not add capacity. Ford has broken ground for new electronics plants in Lansdale, Pa.; Cadiz, Spain; and Setubal, Portugal.

The growth has been spurred by a dramatic increase in electronics in a typical Ford vehicle.

"Electronics is strategic to the personality and functionality of the vehicle in the future whether that is in the arena of emissions, safety or security," said Frank Macher, Ford Electronics general manager.

"You can adjust the personality of the vehicle with electronics very easily. You can have a suspension system that adjusts to the condition and you can integrate that suspension with the transmission and engine to make the total system capable of responding to a driver's desire."

Macher's division is working on changes that will give Ford vehicles more personality. It is developing Ford's first active suspension, traction control and four-wheel-steering systems — technology Japanese and European makers offer on a few cars.

Also planned is the next generation electronic engine-control system, which has been referred to as the EEC-V. Macher said the controller will have more than double the computer capability of the present engine management system, known as the EEC-IV.

In the meantime, Macher said the EEC-IV system should give Ford an advantage over its competitors in Europe when tougher emission standards — similar to present U.S. standards — take effect in 1993. Ford has constructed a plant in Cadiz, Spain, to produce the EEC-IV for Ford of Europe's vehicles. The Cadiz plant will begin production in February 1991.

"The EEC-IV has a tremendous amount of development behind it. That development effort has come up with a tremendous amount of knowledge that has integrated into the software and the calibrations that we use in the United States. Those will have to be modified somewhat to meet local conditions," Macher added.

The real challenge will be in the United States where Macher is working with Ford's powertrain systems engineering organization on meeting tougher emissions and fuel economy standards in the future.

Also under Macher's direction will be developing controllers for Ford's new electronically controlled transmissions. The first transmission — a five-speed — will be produced beginning in 1991 at Ford's Van Dyke transmission plant in Sterling Heights, Mich. Eventually all of Ford's hydraulically controlled transmissions will be replaced by electronically controlled transmissions.

The automaker has not been aggressive in marketing critical components (such as engine controllers and suspension systems) to other automakers, other than those it holds an equity stake. Macher said Ford Electronics currently sells Mazda rear anti-lock brake modules for some of its trucks built in Japan (like the B2000) and audio systems, instrumentation, speed controls, passive restraint modules, powertrain controllers for the V-6 engine and small modules for the Probe. Mazda selected suppliers for the Probe.

"Our most important customer has to be Ford Motor Co. on a worldwide basis, our affiliated companies second and if there's any time for the rest of them, third," Macher said.

Only about 2 percent of the $2.1 billion in Ford Electronics revenues comes from non-Ford companies. Eight percent of Delco's $4 billion in revenue is from non-GM companies.

Macher said Ford is currently selling radios to General Motors of Brazil. It is also pursuing business with other automakers on non-performance sensitive componentry (radios and instrumentation).

Ford Electronics may see business from Ford's acquisition of British luxury carmaker Jaguar.

"I think Jaguar will benefit from Ford Electronics capability. They and other luxury car makers are going to be pressing to compete with Lexus and Infiniti," said Paul Hansen, publisher of *The Hansen Report on Automotive Electronics* and a New Hampshire-based electronics consultant.

Ford Electronics is not expected to be hurt by the sale of Ford Aerospace to Loral Corp. Though the division did supply parts and exchange technology with the aerospace unit, Macher said data from the technology transfer is already with Ford Electronics and will be used in the future. Macher said the door is open with Loral concerning future business.

The virtual electronics explosion will give Ford Electronics a healthy 15 percent growth in the next few years, Macher predicted. That's about double the anticipated 7 to 8 percent growth of the automotive electronics industry, according to Hansen.

Untouched by human operators, printed circuit boards for Ford's EEC-IV engine controller move through machines that insert various circuits.

Auto trade deficit tumbles 14.3% in April

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks fell 14.3 percent in April. The improvement is the latest in a string of positive trade statistics that have left the annualized automotive trade deficit down nearly $6 billion from the same period one year ago.

The value of imported cars and trucks declined 7.9 percent in April, while U.S. exports increased 15.2 percent.

"Total U.S. exports of autos and light trucks rose during April largely because of shifts in production by the Big 3," said Dennis Rapkins, chief of the U.S. International Trade Commission's Machinery and Equipment Division.

The biggest shift was an $59.09 million increase in exports to Canada, said Rapkins, whose agency keeps tabs on automotive trade at the request of Congress.

He said the sluggishness of the U.S. market accounts for the decline in imports.

Shipments from Japan were off 5.4 percent in April and are down slightly over the last 12 months. But Japanese makers have more than made up for that by boosting North American production.

The April vehicle trade deficit was $3.10 billion compared with a $3.61 billion deficit in April 1989.

The value of new vehicle imports in April dropped to $4.24 billion. Imports from Canada fell 10.3 percent. Other countries experiencing a decrease in U.S.-bound trade were South Korea, off 21.6 percent; Mexico, 23.5 percent; and Brazil, 19.5 percent. Countries classified as "others" dropped 27.1 percent.

New vehicle exports increased to $1.15 billion. Exports to Canada increased 9.8 percent, and shipments to Japan were up 59.3 percent. Exports to Japan were up 36.5 percent over the previous 12 months.

Exports to countries grouped as "others" registered a 23.4 percent increase.

DOLLAR

FROM PAGE 3

percent of their sales in the United States, will not pull back from the American market.

"BMW and Mercedes can't afford to let the U.S. market disappear or shrink drastically," said Chew. "But you may see a further move upmarket and a move away from the attempt to defend the entry levels that you see at the moment. They have the products to do it."

In June, BMW of North America introduced its new 318is at $21,500, marking a retreat toward the $20,000 price range. Mercedes has plans to revive the 190E 2.3 for sale under $30,000. But Chew said upcoming model changes, most notably Mercedes' new S-class sedan, puts the companies in a position to move further upscale.

"The key thing is that the ability to increase prices in the U.S. market today is very limited" because of intense competition and thinning profit margins, said Reitman.

The German parent companies point out that they have become less dependent on North America in recent years, even though the overall importance of the American market guarantees their long-term commitment.

A BMW spokesman noted that the United States accounted for 15 percent of the company's sales revenue and 12 percent of production volume last year, down from nearly 20 percent of unit output in 1986. Along the way, U.S. sales have dropped 33 percent.

"We've had a shifting from the U.S. to Europe," he said. "So we not getting gray hairs about this. We look to that business as long term."

He said BMW would not intentionally change export patterns because of a weak dollar and added that the U.S. import operation remains profitable. He said the impact of continued current exchange rates on the group's profits for 1990 would be relatively small.

A VW spokesman also cited the company's reduced dependence on the U.S. market.

"In the late 1960s, 30 percent of our production was sold in the United States," he said. "Today, it is 8 percent."

Hans Halbach, Porsche AG's executive vice president for sales and marketing, said he doesn't believe the dollar will remain at 1.60 marks because that level does not reflect the strength of the U.S. economy.

In addition, "West Germany will have tremendous costs in this unification process, and I think it will affect the deutsche mark," he said.

But Porsche's exposure to the United States is now sharply reduced — from two-thirds of total sales in 1986 to less than one-third this year. Many here view Porsche as a blueprint for other German brands in the United States. It has moved steadily upmarket and stopped trying to defend its previous entry-level position.

"Demand is good for their products (in the United States)," said Reitman, "but they are keeping demand at a fixed level."

Analysts don't expect Mercedes or BMW to cut their allocations for the United States to divert units to more profitable markets. "Neither BMW nor Mercedes is very keen to start scaling back production at the moment," said Lawson. "They need the factory loadings to get the efficiencies. But they will probably be looking closely at what the programs for the U.S. this year."

GERMANY

FROM PAGE 1

East Germany combined will "approach current U.S. levels in less than 10 years." The research group projects 42 million cars on German roads by the end of the decade, or 508 cars per thousand residents. That compares with 33.7 million cars in 1989.

Volkswagen AG officials cite estimates that East Germany could grow to 550,000 units by 1995 — comparable in size to Europe's fifth-largest market, the Netherlands — and reach 700,000 by the end of the decade.

"The East German economy is shrinking, but there is confidence about the medium-term," said Edmund Chew of DRI Europe's Frankfurt office. "There is a lot of pent-up savings and a lot of purchasing power."

A boom in the West German used-car market, attributed to East Germans replacing their Trabants and Wartburgs with second-hand cars from the West, has indirectly bolstered the country's new-car market this year.

Dealers say the market for used cars up to 15,000 marks ($9,550) is all but cleaned out. The industry consensus is that about 100,000 cars were purchased by East German citizens in West Germany during the first seven months of 1990.

The Leipzig Institute for Market Research has estimated that about 70 percent of East German households are in the market for a car.

Demand is being fueled by the fact that East German cars average 11 years old.

Altogether, plans have been announced for more than 1,500 new dealer outlets in East Germany. Nearly 1,000 sales and service centers are already active — mostly VW and Adam Opel AG units. That compares with 1,081 Trabant outlets before the country's political changes.

Many of the new dealers are being culled from the ranks of the old Trabant service network. An Adam Opel spokesman said most new Opel dealers in the East are local entrepreneurs who have operated garages and workshops in the past.

VW Group, West Germany's market leader, has formed a marketing joint venture with its East German manufacturing partner, VEB IFA Kombinat Personenkraftwagen, maker of the Trabant. As of last week, VW had signed agreements with 420 Volkswagen-Audi and 150 Seat dealers in East Germany. A spokesman said orders for 11,500 VW Group cars have been received and sales of 33,000 VW-Audi-Seat cars in the country are expected during the 1990 calendar year.

"It is a bit more than we expected," he said.

Volkswagen's top East German seller is the Golf, not the smaller Polo. Other manufacturers also report that the lower-medium Golf/Ford Escort/Opel Kadett-class subcompacts are proving more popular than the Polo/Ford Fiesta/Opel Corsa superminis that were expected to comprise the top-selling segment in East Germany.

"Our logic said that the biggest demand for our existing product range would come on the Fiesta," said John Hardiman, chairman of Ford of Germany, in a recent interview. "We are getting demand from our West German dealers who are along the border, and interestingly enough the biggest seller is not the Fiesta, it is the Escort. It wasn't our logic, but that's how it is shaking out."

An Adam Opel spokesman also said that the vitality of the market has so far surpassed expectations and that demand for the Kadett has outstripped the Corsa.

Opel, Germany's second best-selling make, now has about 330 active dealers in East Germany and plans to have 400 by the end of 1991. The company has established a sales office in Berlin.

Virtually all manufacturers setting up sales and service networks are sponsoring training courses in West Germany for sales and technical personnel. Renault, among the most aggressive of the non-German companies, conducted a sales and training convention in Berlin in June.

THE ASSOCIATED PRESS

East Germans are dumping their plastic-bodied Trabants, some literally, and switching to Western-built cars.

Dealer networks in East Germany

List indicates current dealers and plans or expectations for the future.

VW — 420 Volkswagen-Audi and 150 Seat dealers signed

Opel — 330 dealers; 400 by the end of 1991

Ford — 140 dealers under contract, but only 79 active; 100 planned for operation by year-end and 200 eventually

Mercedes-Benz — 37 passenger-car dealers planned; 54 commercial vehicle dealers planned

BMW — 15 sales and service centers; 35 planned by end of year; 130 planned by 1994.

Fiat — 100 dealers; 200 planned

Renault — 250 dealers

Peugeot — 70 planned for appointment in September

Volvo — 8 dealers; 30 planned in 1991

Saab — 5 dealers; 15-20 by end of the year

Rover — 60 planned within 3-5 years

Nissan — 38 dealers; 70 by the end of the year

Mazda — 50 planned by the end of the year.

Honda — 18 dealers signed; 30 planned by year end; 100 eventually

Mitsubishi — 100 dealers

Subaru — 20 dealers signed

Toyota — 1 dealer; 45 by the end of the year; 150 in 1992

— Richard Johnson

PROFITS

FROM PAGE 1

ship during 1989, according to the association's just-released annual NADA Data report.

The results were brutal:

- About 25 percent of all new-car dealerships lost money in 1989.
- Profits for the average dealership plummeted 40 percent from 1988 — to the recessionary levels of 1980 — despite a modest increase in total sales dollars. The cause: high inventories that drove up floorplanning costs.

Floorplanning costs were so high last year that then NADA President Ron Tonkin exhorted dealers to stock fewer models as a means of trimming floorplanning interest costs. In 1989 the average dealership paid $127,000 in floorplan interest, according to NADA.

- For the average dealership, net profit before tax as a percent of total sales was a scant 1 percent.
- Average dealership net worth fell 7.4 percent during 1989, to $704,069 at the end of the year.

Even with reduced net worth, the average dealer's return on his investment, represented by net profits as a percent of net worth, declined sharply to 17.5 percent last year. The average return on a dealer's investment was 27.3 percent in 1988 and 37.6 percent as recently as 1986.

- The number of new-car dealerships continued to shrink and even the association's dealer optimism index had fallen to a nine-year low by July before stabilizing.

Total dollar sales for all franchised new car dealerships reached a record of $304 billion in 1989, an increase of less than 1 percent over 1988.

Parts and service accounted for 14.6 percent of total dealership sales, the highest percentage since the 1982 recession. Parts and service accounted for 64 percent of total profits.

Franchised dealers sold a record $44.4 billion in service and parts in 1989. That represents a 48 percent increase over 1985's volume. High vehicle sales, extended warranties and increased service contract sales contributed to the rise.

The average selling price for a vehicle including options and accessories rose 7 percent in 1989 to $15,100, based on actual transactions.

Because of declining sales and modest price increases, the average dealership's total dollar sales rose only 2 percent in 1989.

Dealers sold 14.7 million used vehicles in 1989 — almost as many used vehicles as new ones — representing 23 percent of the average dealership's total sales and 27 percent of total profits.

The number of franchised dealerships declined by about 350 in 1989, according to NADA. *Automotive News* statistics show an actual decline of 337 dealerships last year, for a year-end total of 24,576.

NADA says there are 4,500 fewer dealer principals today than seven years ago, even though the number of dealerships is virtually the same. Consolidation of dealerships accounts for the decrease.

Multiple dealership operators are the rule. More than half of all dealerships are currently part of a chain and more than 30 percent of all dealerships are part of a four-or-more dealership chain.

Note: Some makers offer rebates to buyers of 1989 and 1990 models. Most of these programs are omitted from this table because of the limited number of these vehicles still in dealers' hands.

Chrysler extends spiffs to Sept. 30

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has extended cash rebates and lowered interest rates through Sept. 30 in a mix of dealer and consumer closeout incentives on 1989 and 1990 vehicles.

The cash paybacks, ranging from $500 to $2,500, depending on the model, are unchanged for the program that expired Aug. 14 and cover all models except minivans and convertibles. Chrysler is lowering the interest rate financing it offers on some models as an alternative to cash.

Instead of the cash, buyers can choose finance rates of zero percent for contracts up to 24 months; 4.8 percent for 48 months, down from 7.9 percent offered in the previous program; and 7.9 percent for loans up to 60 months, down from 10.9 percent. These lower rates apply to the Chrysler LeBaron Coupe, New Yorker, New Yorker Salon, New Yorker Landau, New Yorker Fifth Avenue and Imperial; Dodge Daytona and Dynasty; and Jeep Cherokee and Wagoneer Ltd.

The 4.8 interest rate matches similar financing announced by Ford Motor Co. a week earlier on the 1990 Ford Taurus and Thunderbird and Mercury Cougar and Sable.

Chrysler also is offering finance rates of zero or 2.4 percent for loans up to 24 months (depending on model), 7.9 percent up to 48 months and 10.9 percent for contracts up to 60 months on all other models.

Cash rebates by model are: $2,500 on the 1989 Dodge Raider; and $2,000 on the 1989 Chrysler Conquest and LeBaron Coupe, 1989-90 Eagle Premier Limited, Dodge 1989-90 Ramcharger, 1989 Dakota (except S Model) and 1989-90 Ram D/W series pickups (except diesel and Club Cab).

Also: $1,500 on the Eagle 1989-90 Premier ES and 1990 Summit; 1989 Dodge and Plymouth Colt and Vista; 1989 Jeep Comanche (except 2wd short bed); and Dodge 1990 Monaco ES, Dakota (except S Model and Club Cab), D/W series diesel pickup and Ram Van conversion units.

Additionally: $1,000 on the 1990 Chrysler LeBaron Coupe, 1990 Imperial, 1989 New Yorker, 1990 New Yorker Salon, 1989-90 New Yorker Landau and 1990 Fifth Avenue;

1989-90 Dodge Dynasty; 1990 Monaco LE; 1989-90 Daytona ES Turbo, Daytona Shelby; 1989-90 Ram D/W series diesel pickup; 1989-90 Dakota S Model; 1990 Dakota Club Cab; 1989-90 Ram Van, Wagon; 1989 Ram 50 4wd; 1990 Dodge and Plymouth Colt (except base three-door and wagon);

1989-90 Eagle Premier LX, 1990 Summit; Jeep 1990 Comanche; 1989 Comanche 2wd short bed; 1989-90 Cherokee; 1989-90 Wagoneer; and 1989-90 Grand Wagoneer.

Also, $750 on the 1990 Chrysler LeBaron sedan; 1989-90 Plymouth Acclaim, Sundance, Horizon and 1990 Laser; 1989-90 Dodge Spirit, Shadow, Omni and Daytona base and ES models; 1989 Ram 50 2wd; 1990 Plymouth and Dodge Colt base three-door and wagon; 1990 Colt Vista; and 1990 Eagle Talon.

The rebates also include $500 on the 1989-90 Jeep Wrangler.

Chrysler also extended to Aug. 31 the $750 cash rebate to dealers on the 1989-90 Chrysler LeBaron, Dodge Shadow and Spirit, and Plymouth Sundance and Acclaim.

Other incentives expiring Sept. 30 include $2,500 on the 1990 Dodge Monaco and 1989-90 Eagle Premier base model; $4,000 on the 1989-90 Jeep Grand Wagoneer; and $500 on 1989-90 Cherokee Ltd. and Wagoneer Ltd.

INCENTIVE WATCH

DEALER INCENTIVES

	Rebate	Expiration Date
Chrysler Corp. (1989-90 models)		
LeBaron, Shadow, Spirit, Sundance, Acclaim	$750	Aug. 31
Monaco (1990 model)	$2,500	Sept. 30
Premier (1989-90 base models)	$2,500	Sept. 30

Tercel, Camry, Corolla	$200-$1,200, quota	Sept. 4
Trucks	$300-$1,400, quota	Sept. 4
Volkswagen (1990 models)		
Golf	$500	Aug. 31
Fox	$750-$1,000	Aug. 31
Corrado	$1,500	Aug. 31
Volvo (1989-90 models)	$200-$900, based on number sold	Aug. 31

*Quotas apply on Eclipse and 2wd pickups in some regions.
*Customer rebate or dealer rebate; dealer's choice
**$3,000 in California

Note: Some makers offer rebates to dealers on sales of 1989 and 1990 models. Most of these programs are omitted from this table because of the limited number of these vehicles still in dealers' hands.

NAVISTAR

FROM PAGE 2

be reduced from 45 to 38 trucks a day, beginning Sept. 3.

Based on these schedules, Navistar plans to produce 19,400 medium and heavy trucks during its fiscal fourth quarter, 3.96 percent fewer than it built in the same period last year.

The company cautioned that if the Middle East crisis produces a "mild recession," industry demand for medium and heavy trucks could be further depressed.

Meanwhile, sources close to Navistar said its pursuit of Mack is all but over.

Officially, a Navistar spokesman said nothing has changed since Navistar requested certain data about Mack and expressed an interest in purchasing it.

But, privately, sources close to Navistar said the Renault Vehicules Industriels lock on Mack's stock — Renault owns 46.6 percent of its common shares — has discouraged Navistar from pursuing it.

"There's not a lot of hope anything will develope from that," said one source.

For the future, Navistar is considering offering Detroit Diesel's Series 60 engine in its Class 8s.

There also has been a lot of discussion within the company about its need to move heavy-truck production out of the Springfield plant because of high operating costs there.

The opportunity to obtain Mack's new Winnsboro, S.C., was one of the reasons Navistar has been interested in acquiring Mack.

11 GM sites among idled; build down

By Karen Dotkowski
AUTOMOTIVE NEWS STATISTICIAN

Thirteen Big 3 U.S. assembly plants were idled last week due to part shortages or declines in dealer orders.

Of the six truck and seven car assembly plants shut last week, 11 are General Motors facilities.

Members of UAW Local 659 at an AC Rochester Division West plant in Flint, Mich., reached an agreement with GM last Tuesday ending a six-day strike that affected 24,740 workers.

GM truck facilities closed by the strike were Fort Wayne, Ind.; Flint, Mich.; Pontiac, Mich.; East and West; Moraine, Ohio; and Shreveport, La.

Car plants closed by the strike were Flint, Mich.; Lake Orion, Mich.; and Van Nuys, Calif.

Truck plants resumed output Thursday and Friday with the exception of Moraine, Ohio, which is scheduled to resume output today.

Car assembly plants in Flint and Lake Orion resumed Wednesday. The Van Nuys plant, closed Thursday during the first shift, is scheduled to reopen today.

A parts shortage not in conjunction with the AC West strike idled the Fairfax, Kan., plant last week. The Willow Run, Mich., plant is idled for two weeks due to a canceled export order of Chevrolet Caprices to the Middle East. Both plants will resume output Aug. 27.

Ford Motor Co. announced the idling of its Atlanta and Kansas City, Mo., plants this week and the Dearborn, Mich., plant last week due to shortages in dealer orders. The Dearborn plant will remain closed this week for a parts shortage. The Lorain, Ohio, plant has extended downtime due to a shortage of interior trim. All four plants are expected to resume output Aug. 27.

Chrysler Corp.'s No. 2 plant in St. Louis is idle this week for model changeover.

Last week automakers scheduled 111,263 units, 6.57 percent below the prior week and 11.37 percent below the year-ago week.

Truckmakers' estimated build of 57,725 units was 14.81 percent below the previous week and 24.70 percent below the year-ago week.

Last week's estimated production was split as follows: GM, 40.53 percent; Ford, 22.26 percent; Chrysler, 13.89 percent; Honda of America Manufacturing Inc., 8.08 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.97 percent; New United Motor Manufacturing Inc., 3.68 percent; Mazda Motor Manufacturing Corp., 3.26 percent; Diamond-Star Motors Corp., 2.89 percent; Nissan Motor Manufacturing Inc., 0.83 percent; and Subaru-Isuzu Automotive Inc., 0.61 percent.

Canada plus on cars, trucks

Canadian automakers scheduled 14,203 units last week, 15.37 percent above the prior week.

Truckmakers targeted production of 13,165 units, 145.30 percent above the previous week.

Saturn will tout its people first, then its cars

By Raymond Serafin and Patricia Strnad
CRAIN NEWS SERVICE

Saturn Corp. plans to dramatize how it is a "different kind of company" by profiling employees and dealers in advertisements preceding the introduction of its first cars this fall.

The testimonial-like corporate advertising on television and in print will be followed by product advertising, said Saturn dealers familiar with some aspects of ad launch plans.

Officials at General Motors' Saturn Corp. and its ad agency Hal Riney & Partners in San Francisco have declined to discuss the advertising.

One source, who asked not to be identified, said Saturn plans to include in the prelaunch television campaign "character studies" of some of those who moved to Spring Hill, Tenn., to be part of the startup of the Saturn manufacturing complex there. The move is told from the point of view of employees, their families and even a dog, the source said.

Saturn is expected to use the ad theme line, "A different kind of company. A different kind of car."

The Saturn sedan and coupe began rolling off the assembly line in Spring Hill on July 31. Cars are expected to begin reaching dealership showrooms in late October or November.

Saturn officials have told dealers that only 5 percent of the general car-buying public knows what Saturn is, so generating awareness will be an important part of early advertising.

"We have to introduce the company," said dealer Bert Boeckmann, who has the Saturn franchise for the north Los Angeles area. "If we do the right advertising job, we'll have people come in to drive the car." Boeckmann expects ads to break in mid-September.

John Campbell III

One person featured in a print ad is California megadealer John Campbell III, who is opening a Saturn dealership in Santa Ana, Calif. Campbell said the ad will mention that he also holds a Nissan franchise, in an attempt to show that an import dealer has confidence that Saturn will appeal to buyers. With this

Big 3 continue Mideast activities

Sales strong for GM and Ford; Chrysler returns next month

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. will begin its reentry into the Middle East market next month with the first shipments of Jeeps and large cars.

The timing of the return may seem terrible. But Chrysler executive Jonathan Holcomb forecasts a drop of just 10 to 15 percent from Chrysler's earlier projections of 6,000 to 8,000 sales in the Middle East for the 1991 model year.

The Iraqi occupation of Kuwait and the American military buildup in the Persian Gulf are not prompting the Big 3 to abandon a buoyant Mideast big-car market.

"We're not pulling out of the Middle East or anything else," says Holcomb, director of Middle East, Africa, Far East and Latin America sales for Chrysler's International Operations. "We are moving forward in our plans."

Meanwhile, Holcomb is looking for new transportation routes to get products to Mideast dealers.

Chrysler's calm typifies the domestic automakers' plans. The Middle East is the largest export market for North American-built cars and trucks for both General Motors and Ford Motor Co.

The Big 3 expect the crisis to have little effect on their generally buoyant Mideast sales outside of Kuwait.

Last year, GM sold 42,952 North American-built cars and trucks in the Middle East, about 42 percent of its 103,120 North American exports. Ford sold 9,550 North American-built cars and trucks in the Middle East, more than a quarter of its 37,000 exports.

Chrysler virtually ended exports

GM begins '91 rebates before '91 intro

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Before it is even under way, the 1991 model year is beginning to look a lot like the 1990 model year as far as consumer rebates are concerned.

Pontiac, Oldsmobile and Chevrolet are offering cash payments of $500 to $1,500 to buyers of 1991 models that reach dealerships before their official introduction on Sept. 27. Dealers have permission to pre-sell those cars.

The new GM incentives run through Sept. 26, thus the rebates on the 1991 models expire before those 1991 models are officially on sale.

These programs follow by just two weeks the announcement of pre-introductory price hikes of $100 to $2,780 on most models involved in the rebates.

The incentives are the first to be offered on 1991 models with fall introduction dates.

In addition to its current rebates on 1989 and 1990 models, Pontiac is offering payments on all of its 1991s.

The Pontiac rebates are: $500 on

ROLLING REVIVAL

Roughed up by downsizing, Cadillac returns to its roots, boosts sales; now focus turns to younger buyers

By Michelle Krebs
SPECIAL CORRESPONDENT

Actors Robert Conrad, Robert Guillaume and Garrett Morris drive Eldorados or Sevilles. Comic Louie Anderson and Hollywood stars Loni Anderson, Burt Reynolds, Larry Hagman and Sylvester Stallone tool around in Allantes.

Cadillacs, according to *Gentlemen's Quarterly*, are making a comeback on Hollywood's Rodeo Drive.

They are also returning to highways and byways in the rest of the country.

In the last two years, Cadillac has achieved an uptick in sales, market share and reputation largely by winning back customers — from the Hollywood movie stars to the Midwest business executives — who turned away from General Motors' flagship division in the mid-1980s.

Now, just when things look bright again, the Middle East crisis could threaten Cadillac's resurgence, but Cadillac officials are optimistic. They believe the division is in better shape to cope with an oil crisis than it was 10 years ago.

Though all of its cars are powered by V-8 engines, today's engines are more fuel efficient than those of a decade ago. The Cadillac V-8s of 1979 averaged 10 mpg. Today's average 16 in the city and 26 mpg on the highway even though horsepower has steadily increased.

In addition, Cadillac says luxury car buyers are willing to pay for size and power. The Cadillac Brougham, for

see CADILLAC, page 32

AUTOMOTIVE NEWS/JOE WILSSENS

Having steered Cadillac back to healthier sales, General Manager John Grettenberger's current challenge is to keep luxury car buyers from defecting to imported competitors.

UAW mulls strike target choice

Ford tagged the favorite, quick settlement might pressure GM

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Market share will play a crucial role in this year's contract talks between the UAW and the Big 3 automakers.

With General Motors gaining market share and Ford Motor Co. and Chrysler Corp. losing, some analysts and union leaders believe that GM may be less willing to risk a strike and less willing to break the contract pattern should Ford be selected as the target company again this year.

Union President Owen Bieber will announce his strike target Tuesday to top union leaders meeting in Detroit.

Once the union picks a target, bargaining will be concentrated at that company until a pattern-setting contract is agreed upon.

At GM's annual meeting in May, shareholders approved an increase in pensions for top executives.

The increases "may have been made with a purpose in mind; namely, get the UAW so upset that the leadership would be forced to choose GM as the target company," wrote auto analyst Jack Kirnan in a Kidder, Peabody & Co. newsletter. "Although the very complexity of the job security issue would argue for GM being chosen as the UAW strike target, we continue to believe that the odds favor Ford."

UAW President Owen Bieber will announce the strike target on Tuesday. Contracts expire Sept. 14.

Some union insiders close to negotiations tell *Automotive News* that their money, too, is on Ford. It's widely believed that the union can settle quickly with Ford and get what it wants because the company has good rapport with its workers and is operating at near 100 percent capacity.

"You would think the union would want to pick GM, but they can get a quicker response from Ford, and GM will have to meet the competition," said Irvin Otis, former director of industrial engineering for Chrysler. Otis is president of Irvin Otis & Associates Inc. in Southfield, Mich., a consultant firm that specializes in plant management and productivity.

Otis said the recent six-day strike at a GM parts plant in Flint, Mich., showed how the just-in-time system can quickly cripple a company. Eleven GM assembly plants were shut down due to the strike; the company lost production of 21,000 vehicles.

GM earns $2,356 on each large vehicle it sells and loses $1,395 on each small and mid-sized vehicle,

Capris are commanding price premiums in California.

Some dealers can't resist marking up Capri prices

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Dedicated Mercury owner Lance Clay of Los Angeles couldn't wait for the sporty Mercury Capri to hit the showrooms last month. At an auto show in Hawaii in 1982, he had fallen in love with the Barchetta concept car that eventually became the Capri.

But Clay's excitement dimmed when he entered Star Lincoln-Mercury in Glendale, Calif., and saw the words "dealer mark-up $3,000" on a price tag for a base model Capri. The dealer, according to Clay, attributed the mark-up to upgraded equipment.

"I had to look at the vehicle again to make sure it wasn't a Miata," said Clay, referring to the Mazda roadster that continues to fetch more than the manufacturer's suggested retail price. Craig Garland, the dealership's sales manager, said the store changed owners three weeks ago and the added price on the Capri "was one of the first things to go."

Garland said Capris at Star are now priced without any dealer mark-up.

But another California dealer is continuing to receive premiums for the Capri. Jack Goode, assistant sales manager of Fresno Lincoln-Mercury in Fresno, said his dealership is asking $2,500 over sticker.

"We're only getting about half of that," said Goode, who said the dealership has sold all but one of the 12 Capris that it has received in the last month.

"People are willing to pay a premium for the car," he said.

Other California dealers told *Automotive News* that although the Capri is in high demand, they will not pad the sticker.

L-M spokesman Chuck Snearly said L-M General Manager Ross Roberts received a letter from Clay about his experience with Star Lincoln-Mercury. The division contacted Star and was assured that the cars were currently selling at the manufacturer's suggested retail price.

Snearly said L-M has had no other reports of dealers selling the Capri at inflated prices. He said those who do mark up the Capri will be "counseled" by L-M, but the division does not plan to curtail Capri shipments to offending dealers. L-M has said in the past that it does not want its dealers to mark-up Capri prices.

Domestic vehicle sales fall 4.55 percent in mid-August

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Trucks and transplant cars were the only gainers in the middle 10 days of August as domestic vehicle sales dropped a modest 4.55 percent from high year-ago figures.

Tom Webb, chief economist for the National Automobile Dealers Association, said he "expected much worse" in light of the crisis in the Middle East and rising energy prices.

A year ago, cars sold fast when historically high consumer incentives helped rid showrooms of hefty inventories.

Sales totaled 260,106 vehicles during the Aug. 11-20 period, which had eight selling days, the same as last year. Truck sales were up 5.07 percent with 100,766 units delivered. Car sales slipped to 159,340, down 9.77 percent from 1989.

As it has for much of this year, Chrysler Corp. had the biggest drop: 19.54 percent. Chrysler's truck sales fell 9.51 percent; its car sales declined 27.27 percent.

At Ford Motor Co., all Lincoln nameplates had gains, but every other Ford Motor Co. nameplate was down. An increase in truck sales helped Ford limit its overall vehicle sales decline to 7.37 percent in mid-August.

GM's overall sales slipped 6.10 percent. Car sales slid 10.15 percent; truck sales were up 1.31 percent.

Chevrolet, up 8.65 percent in overall car sales, was the only GM division to report an increase. Oldsmobile fared worst among GM's divisions, down 32.44 percent.

Nissan joined Chrysler as the only domestic maker to report a decline in truck sales, and its combined domestic car and truck sales slipped 0.26 percent.

Mazda led all transplants with a gain of 182.38 percent. The 1,900 deliveries of the 626 model, which hadn't yet gone into production at the Flat Rock, Mich., plant at this time last year, helped Mazda's rise.

Toyota's sales of U.S.-built vehicles were up 65.78 percent; Honda's were up 26.62 percent; and Mitsubishi's were up 23.62 percent.

Fleet buyers maintain orders for 1991

By Joseph Bohn
TRUCK EDITOR

Fleet sales may help stabilize an otherwise chaotic new-car and truck market in 1991.

Major fleet buyers, who are formulating their 1991-model buying plans, expect to repeat last year's strong buying activity, an *Automotive News* survey of seven major corporations suggests.

3M drops Dynasty for Acclaim, Page 36

Given the uncertainties in the economy and the oil supply from the Middle East, some fleets may still reassess their trade-in or buying plans.

But heading into 1991, it's still business as usual.

In 1989, fleet sales constituted about 20 percent of all new-vehicle sales, up from 13.5 in 1979, according to the National Automobile Dealers Association.

And fleets consist almost exclusively of domestic nameplates, according to Phillip Russo, assistant executive director of the National Association of Fleet Administrators in Iselin, N.J.

Uncertainty in the world hasn't translated into fleet buyers pulling in their horns.

As Tim Hoffman, manager of fleet services for 3M Corp. in St. Paul, Minn., pointed out, "If I have a stable replacement cycle that makes economic sense to our fleet, then we'll stay with that cycle unless there's a severe recession in the economy.

"Deferring purchases has a way of catching up to you. It's like not paying your Visa bill. Ultimately, it's still there," Hoffman added.

Chevrolet's Lumina APV minivan will continue to make inroads into commercial fleet markets this fall.

Premark International Inc.'s Tupperware Division in Kissimmee, Fla., for example, has placed orders for 2,500 Lumina APVs, according to John Bandy, director of fleet operations. They will replace Dodge Caravans.

Bandy cited the APV's "modern look" and "flexibility seating" as primary reasons for selecting it.

Tupperware's fleet business is basically all van. The company turns over its fleet of nearly 7,000 vehicles every two years.

Xerox Corp. of Rochester, N.Y., gave its employees a choice of Lumina APV, Dodge Caravan C/V cargo van or Ford Ranger pickup truck last year and plans to do so again in 1991, according to Ron Pink, business manager for vehicle fleet business.

About 2,200 employees picked Lumina APVs, 1,500 picked the Chrysler minivan and 200 picked Ford Ranger. Xerox also bought about 200 Pontiac 6000 mid-sized cars.

Pink expects the company to purchase 3,500 to 3,800 vehicles in 1991, following last year's pattern.

"We had excellent driver feedback on all the products," he said. "We're very happy with them."

The National Association of Fleet Administrators says about 99 percent of fleet vehicles are domes-

Corrections

- A story last week gave the wrong pre-introductory price for the 1991 Oldsmobile Toronado Trofeo. The price is $26,495.
- An Aug. 6 story on the Chevrolet Caprice stated that its air bag would deploy in frontal impacts over 24 mph. Actually, the bag will deploy at speeds as low as 12 mph, depending on the severity of the impact.
- A headline Aug. 20 mistakenly identified Bill Nerenberg, who was released by the National Vehicle Leasing Association, as the organization's founder. He was the executive director.

Delays prompt Chevrolet to drop Beretta droptop

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet last week canceled its long-delayed convertible version of the Beretta compact coupe.

That leaves Chevrolet dealers with only Camaro to offer in the mid-price segment of the convertible market. But sources at Chevrolet and ASC Inc. of Southgate, Mich., say Chevrolet has been discussing reviving the Cavalier convertible that was dropped at the end of the 1989 model year.

The demise of the Beretta program was announced by the parent of the company that was doing the conversion: C&C Inc. of Brighton, Mich.

"General Motors made a marketing decision," said Kenneth J. Zak, manager of investor relations at Masco Industries Inc., of Taylor, Mich. Masco bought C&C in 1987.

"The inventory on Corsica and Beretta is high," Zak said.

Last year Chevrolet sold 96,765 Berettas through the first seven months. Sales for the period dropped to 63,481 this year.

Another problem, Zak said, "was that this was supposed to be a '90 program and it was delayed for a variety of engineering problems and changes."

Chevrolet spokesman Tom Hoxie said delay, as C&C struggled to meet Chevrolet's tougher goals for quality, forced the cancellation. That delay allowed other makers to get a secure footing in the affordable convertible market.

Beretta competition would have included ragtop versions of the Pontiac Sunbird, Dodge Shadow, Ford Mustang, Chrysler LeBaron, Mercury Capri, Toyota Celica, Volkswagen Cabriolet and Camaro.

Hoxie said the price of the droptop Beretta was originally supposed to fall somewhere between $15,000 and $17,000. But he said estimates this year put the price closer to $20,000.

"Based on our analysis of the convertible market in this size and price range, we concluded that a sufficient opportunity to market the Beretta convertible profitably no longer existed."

Asked about reviving the Cavalier convertible, Hoxie said the possibility had been discussed with ASC.

The Southgate company converted the Cavalier and continues to convert the Pontiac Sunbird at a plant in North Jackson, Ohio, just a few miles from the Lordstown, Ohio, plant that builds the J-cars. An ASC representative said it would only take "three to six weeks" to make the changes necessary to again produce the Cavalier convertible.

In June 1989, Chevrolet told the press that the Beretta convertible would be built in January 1990 "with the first units going to dealerships in Florida and California." The balance were due in showrooms by last spring.

Oldsmobile convertible last of 1990 introductions

Shipments of the Oldsmobile Cutlass Supreme convertible began the week of Aug. 13, making it the final 1990-model vehicle to be introduced.

The $20,995 car was announced Sept. 7, 1989, for a midyear introduction, but manufacturing difficulties at GM's Doraville, Ga., plant delayed the project. Only 450 were built before the plant changed over to 1991 models.

The ambitious conversion of coupes to convertibles is carried out at the plant by GM and conversion specialist C&C Inc. of Brighton, Mich. The convertible design uses a structural top bar that contributes to body rigidity, retains standard seatbelt anchors and outside door-handle mechanisms and protects rear-seat passengers from some wind buffeting. The top mechanism is electrically operated, and the top has a headliner.

Only 450 '90 Cutlass Supreme ragtops were built.

Production engineers said they discovered unacceptable body shake in early versions of the car, and introduction was delayed until the problem was resolved.

Oldsmobile used a prototype version of the Cutlass Supreme convertible as the pace car at the 1988 Indianapolis 500.

Indonesian group readies Mazda store in California, wants more U.S. outlets

By Kristine Stiven Breese

IRVINE, Calif. — A group of Indonesian investors will open a mammoth Mazda dealership in Southern California next month and has set its sights on other stores.

Irvine Mazda is scheduled to open Sept. 7. It is the first U.S. dealership for the investors, who founded Indomobil (America) Inc. in 1988 "for the purpose of acquiring and operating dealerships within the United States."

At 90,000 square feet, it is one of the largest single-point Mazda facilities in the nation, according to Mazda Motor of America Inc. The store sits on three acres in the Irvine Auto Center mall in affluent Orange County, south of Los Angeles.

Irvine Auto Center is home to nine dealers representing 26 nameplates. Last year combined sales at the auto center totaled $400 million.

Dealer sources peg the Irvine Mazda investment — its building, land and other assets — at close to $9 million. Benny Burns, executive vice president of Indomobil (America), would not confirm the figure but called the store "a sizable investment."

Burns, a former sales operations manager with Mazda's Pacific region, joined Indomobil (America) Aug. 1. He said the company has no formal ties to Indomobil in Jakarta, Indonesia. The Indonesian operation is a large trading company that deals in automotive and other businesses.

"Our first concern will be to get this dealership up and operating, then we'll tackle where to go next," said Burns. "We are looking at a number of other opportunities."

Burns would not say how much money is available for other Indomobil (America) ventures. "We could do some more of those," he said, pointing to the Irvine Mazda

Volvo shows top-line 900; U.S. debut set for autumn

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volvo Car Corp. has taken the wraps off its new 960/940 range, a reskinned version of the eight-year-old 700 series that gives the Swedish company a more direct competitor to German luxury sedans.

The top-of-the-range 960, which takes Volvo farther upscale, has an all-new driveline, including an in-line six-cylinder, 3.0-liter engine and electronically controlled automatic transmission.

The 960 and the four-cylinder 940 replace the 760 and some versions of the 740. The 960/940 are distinguished by a new, rounder rear design with a softened angle for the upright C-pillar, long a source of criticism.

The 940 will be introduced in the United States this fall in GLE, Turbo and SE packages. The 740 will be offered in two versions, the 740 Turbo and 740.

The 960 is not scheduled to debut in the United States until the 1992 model year because of capacity limitations in Sweden and the schedule for compliance with California emissions standards.

Meanwhile, Volvo is phasing out the Carrozzeria Bertone-built 780 coupe, which has been sold primarily in the United States and Japan. Production of the coupe will cease at the end of the 1991 model run end, according to a Volvo Cars of North America spokesman. The coupe, which is produced at Bertone's plant in Turin, Italy, will lose its 780 designation in the United States this year and will be referred to only as "the coupe."

Plans call for exporting 400 coupes to the United States for the 1991 model year. They will have a special "Nuccio Bertone" signature plaque.

The 780 has never been a big sales success, but the spokesman said the car, introduced in 1985, was programmed for a limited production run. He said the close-out does not result from disappointing sales.

No new 900-series-based coupe is planned.

Only about 8,000 960s will be produced in 1990 — all designated for Europe. Capacity for the range-

West Germany leads Europe to sales upturn in July

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales in Western Europe rose slightly in July as the booming West German market — Europe's largest — helped offset declines in the United Kingdom and Italy.

European sales in July edged up 1.8 percent to 1,028,700 units. Through the first seven months of 1990, 8,325,500 cars were sold, 0.3 percent more than last year, according to industry estimates compiled by *Automotive News*.

Industry analysts remain almost unanimous in predicting a second-half fallback that will cause the full-year total to drop 3 to 5 percent from last year's record 13.46 million.

But the strong German market is threatening to break its 1987 record of 2.92 million new registrations.

West German sales rose 14.3 percent in July to 257,700 units. For seven months, they were 4.0 percent over 1989 at 1,828,000.

Germany's market leader, the Volkswagen AG group, is clinging to first place in Western Europe with a 17-country market share of 15.4 percent. Fiat Auto S.p.A. is next at 15.3 percent.

Sales for the VW group — including the VW, Audi and Seat brands — fell 2.2 percent in July to 174,500. But for the year, sales were up 2.3 percent. A star performer has been Seat, VW's Spanish subsidiary, which boosted its European sales 7.1 percent to 195,400 despite an industrywide decline in Spain's home market.

Fiat group — including the Fiat, Lancia and Alfa Romeo brands — suffered a 6.8 percent slide to 161,700 units in July. The group was 1.0 percent behind its 1989 total through seven months.

France's Peugeot S.A. group — Peugeot and Citroen — rose 4.3 percent in July to 134,800 units. For seven months, Peugeot sales were down 0.4 percent, and the group was in third place with a 12.9 percent share.

General Motors Europe — including Opel, Vauxhall, Saab, Isuzu and some North American-built GM models — held 11.8 percent of the European market in the first seven months on the strength of a 3.6 percent sales increase. July sales rose 8.9 percent to 115,500.

Ford of Europe, including the Ford and Jaguar brands, followed with 11.3 percent of the market on sales of 943,000 cars, down 0.3 percent drop from 1989. July sales climbed 6.0 percent to 101,300.

Renault S.A. sales rose 1.6 percent in July to 118,800. They were down 0.6 percent for the year to 845,700, a 10.2 percent share.

Among specialists, Mercedes-Benz sales were down 0.8 percent for seven months, and arch-rival BMW dipped 5.3 percent.

Japanese makes combined were 4.2 percent above 1989 at 915,000 sales for seven months, good for 11 percent of sales in the 17 Western European nations. Nissan was tops with 223,700, a 6.6 percent decline through July. Mazda and Honda have made new headway in Europe this year. Mazda's seven-month sales were up 19.6 percent, and Honda's climbed 13.0 percent.

New-car sales in Italy plunged 10.3 percent to 195,000 units in July, according to unofficial estimates. For seven months, sales were up 3.9 percent to 1,625,200.

Sales in France rose 4.0 percent in July to 229,400 and were 5.2 percent ahead of 1989 for seven months. But the United Kingdom, beset by rising interest rates, was down 10.9 percent to 1,111,800. July sales in the United Kingdom declined 10.5 percent to 45,700.

Sales in Spain were off 0.5 percent in July and were down 8.3 percent for seven months.

America's era of chrome and big fins is a big hit with Japan's young at heart, judging from the attention given to the 1950s Fords, Chevrolets, Edsels and Pontiacs displayed at a car show last month. The No.1 attention grabber? A pink '59 Cadillac convertible, pictured here.

Finned Cadillacs of the '50s a favorite of young Japanese

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — It was a place to take your date. Young couples strolled through the First American Dream Car Fair, gawking at the cars Japanese seem to regard as the finest America has ever produced: the big finned iron of the 1950s.

The hit was a 1959 pink Cadillac available, according to exhibit organizers, for about $100,000. Youngsters lined up to have their pictures taken beside it.

The whole show was a movie set of period Americana. Hawaiian shirts were for sale, as well as such '40s and '50s kitsch as plastic dolls and Coca-Cola signs.

Dating couples were wide-eyed at the bright colors and voluminous shapes. Koji Yasui, 22, and Hiromi Tabata, 20, who work together at a computer firm, were delighted with how *hade* it all was, meaning eye-catching, gaudy. Akihiko Takamatsu, 20, brought his girlfriend to the show to see the America his parents had always talked about.

The American 1950s are special to the Japanese, "timeless and good," according to Keisuke Suzuki of the Japan Show Car Association, the main sponsor. The cars in particular, he says, convey the image of a country that was "rich, big and powerful" at a time when "Japanese were very poor. They wanted to be like the Americans in the '50s."

Suzuki is sure the American classics will continue to be popular in Japan and that sales, which he estimates at 1,000 to 2,000 units in the last few years, will rise, even at prices ranging from $40,000 to $100,000. "Japanese are not poor now," he explains.

Malaysia moves to tighten local-content requirements

By Michael J. Dunne
SPECIAL CORRESPONDENT

KUALA LAMPUR, Malaysia — Malaysian auto industry officials revealed plans Aug. 2 for a stricter local-content policy. Industry officials said the reform is designed to accelerate the rate at which local assemblers source Malaysian parts for their assembly operations.

Since 1979, Malaysia has used a local-content policy encumbered by bureaucratic processes and stringent guidelines. To date, the Malaysian Industrial Development Authority has approved only 27 parts for the program. Thailand, in contrast, boasts an across-the-board local-content requirement of 54 percent.

"Thailand's parts manufacturers are about five years ahead of us," commented BMW's local-content executive in Malaysia, Devindran Ramanathan.

"We think that the present local-content system is not effective," acknowledged Terry Hong, executive secretary of the Malaysian Automotive Component Parts Manufacturers Association. "So, there will be formulation in the next one or two months of a new local-content policy based on target percentages."

The proposal goes to the cabinet for action in September or October. Othman said his group "is almost 100 percent certain the policy will be adopted and implementation will follow almost immediately."

He estimated that the initial minimum target level would be set at around 30 percent, about the current industry average.

Malaysia's national car, the Proton Saga, has achieved a local content rate of more than 60 percent, about twice as high as the national average. Proton officials cite two reasons:

- First, the Proton national car project was undertaken primarily to promote the development of the local parts industry.
- Second, the high percentage of local content allows Proton to be exported on favorable terms to Great Britain.

Proton speeds sale of shares as profits soar

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Malaysia's national carmaker Perusahaan Otomobil Nasional (Proton) has announced that profits have quintupled and has declared its intention to go public within a year.

Pre-tax profits for the year ended March 31 were $61 million, compared with $12 million last year. The profitability of the company reflects its dominant share of the local market and success in overseas markets, primarily the United Kingdom.

Prime Minister Mahathir Mohamad — closely identified with Proton development — said the company will seek a stock market listing two years ahead of schedule. State-run Heavy Industries Corp. of Malaysia owns 70 percent of Proton; Mitsubishi Motors Corp. of Japan holds 30 percent.

The Malaysian automaker has introduced a new Proton model called the Saga Megavalve. The Mitsubishi Lancer-based car is the first significant model change for the Saga since 1987.

Ford changeover adds to 13.7% fall in Mexico exports

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Mexico's exports of assembled vehicles in the first six months were down 13.78 percent from the same period last year.

Much of the decline can be traced to Ford Motor Co. S.A. de C.V. plant in Hermosillo. It was closed through April, when the new Escort and Tracer went into production.

Chrysler Mexico S.A.'s export numbers also dropped significantly. It is no longer building Aries and Reliant models that were shipped to the United States from Mexico a year ago.

Figures published by the Mexican Automotive Industry Association show that 99,836 vehicles were exported from January through June, compared with 115,786 in the first half of 1989.

While half-year exports were down, exports increased in June. They rose 423 units to 26,595 vehicles.

Chrysler's first-half exports declined 37.6 percent to 28,982 this year.

Nissan Mexicana's overseas sales declined 19.7 percent to 10,475.

Exports by General Motors de Mexico S.A. de C.V. fell less than a percentage point to 19,641.

Volkswagen de Mexico's exports more than doubled to 21,919. U.S. Golf and Jetta models are now sourced mainly from Mexico.

Ford, Chrysler, GM and VW ship most of their Mexican-built exports to the United States. Nissan does not export from Mexico to the

VW execs woo German suppliers to Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Top Volkswagen executives based in Mexico will travel to Germany next month in a bid to persuade German components suppliers to invest in Mexico.

Martin Josephi, president of Volkswagen de Mexico S.A. de C.V., said the mission's participants will include leading Mexican government officials. Executives from Daimler-Benz, which holds an 80 percent stake in Mexican truckmaker FAMSA, also will make the trip.

Volkswagen has a major assembly operation in Mexico and plans to export 150,000 vehicles a year by 1993, mostly to the United States and Canada, according to Josephi. This year the company expects to export about 55,000.

Josephi said Volkswagen de Mexico, which imports about $633 million worth of components from Europe a year, hopes to halve such imports by the end of 1993.

It plans to do so by buying engine parts and other components from companies based in Mexico, rather than in Europe, he said.

"We will be happy if we get 10 or 15 suppliers to (come to) Mexico," said Josephi, stressing that they would be medium-sized companies that would be expected to make an average investment of up to $9.5 million each.

Josephi said Volkswagen de Mexico's "complete altering of its sourcing strategy," as he put it, is a result of the likelihood of a free trade agreement between Mexico and the United States being signed next year.

Josephi and Shoichi Amemiya, president and general director of Nissan Mexicana S.A. de C.V., believe that their three rivals in Mexico — Ford, Chrysler, and General Motors — will gain an initial advantage from an agreement simply because they are American.

Josephi said that Volkswagen has to pay a 10 percent import tax on parts shipped from Europe, whereas the American assemblers would pay nothing under the expected agreement because their parts come from the United States.

Said Amemiya: "Nissan Mexicana has been in Mexico for 30 years. We feel that we should receive preferential treatment.

Mexico's president, Carlos Salinas de Gortari, last spring declared Mexican interest in a free trade agreement, similar to the pact between the United States and Canada.

Formal negotiations are not expected to get under way until the end of this year.

Amemiya said that there are still "many uncertainties" to be clarified before any agreements are reached and he hoped Nissan Mexicana will be consulted.

He added: "I don't think Mexico will benefit overnight from an agreement. If you want to promote investment in heavy industry in Mexico, the period of pregnancy should be much longer than people are talking about. I think we need at least three years from the time of an investment being made until output starts."

BERETTA

FROM PAGE 3

But Beretta sailed past the launch target. When asked in May about the cause of the inital delay, a Chevrolet spokesman said, "so far the vehicle has failed to meet our quality targets."

Beretta was to have been one of a new generation of higher quality convertibles with much of the body-stiffening conversion work done inside the assembly plant in Wilmington, Del. Minor rear-seat-area reinforcement, top stack installation, hard boot installation and some interior trim work were to be done at a C&C satellite factory in Bridgeport, N.J., 20 miles from the GM plant.

Reservations about the program did not stop Chevrolet from using a 245-horsepower version of the topless Beretta to pace this year's Indianapolis 500. Chevrolet General Manager J.C. "Jim" Perkins took the wheel himself for the pace laps.

Beretta convertible was expected to go on sale in January. Chevrolet blamed development delays and rising costs for the car's demise.

Even C&C admitted in May that there were problems meeting Chevrolet's stiff convertible standards.

"We don't launch cars today of any kind if the quality is not right," said C&C President David Draper in a May interview. "Our plant is still working on building pilots. Everybody wants to be at a comfort level that says the car is ready to launch. It will be Chevrolet's decision when they launch."

Masco's release announcing the cancellation said C&C would negotiate with GM to pursue recovery of C&C's investment of approximately $20 million in the Beretta project.

Four Chevrolet dealers plead guilty to price fixing

By Helen Kahn
SENIOR CORRESPONDENT

Four Chevrolet dealers in the Rochester, N.Y., area have pleaded guilty to charges that they took part in a price-fixing scheme at two tent sales in 1988 and 1989.

Five other Chevy dealers who were indicted insist they have not violated any law and will fight the charges.

New York Attorney General Robert Abrams originally charged nine Chevy dealerships and nine individuals with agreeing to raise tent sale prices and blocking comparison shopping by assigning customers to a particular dealer and salesperson.

In a statement, attorney Paul Braunsdorf said the four dealers pleaded guilty to avoid the expense of defending themselves. The other dealers will "vigorously" contest the charges and believe rules established at the tent sale were intended to "bring some order out of the chaos" at the event. Those rules did not restrict customers from negotiating the best deal, the statement said.

Also charged in the case were the Monroe County Chevrolet Dealers Association, the Rochester Area Chevrolet Dealer's Advertising Association and the Rochester Automobile Dealers Association.

A 10th Chevy dealership who participated in the August tent sales, Bob Johnson Chevrolet in Rochester, has not been charged. Johnson told *Automotive News* he could not comment because he believes his dealership may still be under investigation.

The four Chevy dealerships that pleaded guilty will pay $63,450 in restitution to 154 customers who bought cars at the sales. They are Durfee Chevrolet-Oldsmobile, Spencerport, $9,275 to 36 customers; Hallman Chevrolet Ltd., Rochester, $25,385 to 65 customers; Hoselton Chevrolet Inc., East Rochester, $16,290 to 32 customers; and Molye Chevrolet Sales Corp., Honeoye Falls, $12,-500 to 21 customers.

Last May, eight Rochester-area Chrysler dealerships, 10 individuals and the Rochester Automobile Dealers Association were arraigned for conspiring to fix prices on a tent sale that was scrubbed on Abrams' demand. In April, three other Chrysler dealers pleaded guilty to misdemeanor charges of facilitating conspiracy to fix prices and agreed to cooperate with the state.
A grand jury will continue its investigation through the end of the year and could bring more indictments.

MIDDLE EAST

FROM PAGE 1

to the Middle East when it phased out models that could use leaded gasoline. It exported only 250 North American-built vehicles to the Middle East in 1989 out of 83,000 worldwide.

All three manufacturers sell cars and trucks in the Gulf Cooperation Council countries: Kuwait, Saudi Arabia, Bahrain, the United Arab Emirates, Qatar and Oman.

GM, Ford and Chrysler said last week that they will continue to support the demand for full-sized cars and trucks in Middle East markets that are still open.

Dale R. Hermiller, executive in charge of GM's international export sales, said Kuwait dealers could not take delivery of 7,000 Chevrolet Caprice units since the Aug. 2 invasion, but dealers in other Mideast markets said they would take 2,000 of those cars.

"Quite frankly, I wish I had more cars and trucks on the ground in Saudia Arabia," said Hermiller, who said GM has 45 percent of that country's "high group" car market — the most expensive cars.

"There is a very large increase in demand for commercial vehicles. We need more four-wheel-drive pickups, Blazers and Suburbans," Hermiller said.

He is projecting sales of 37,000 to 38,000 vehicles in the Middle East for the 1990 calendar year, 42,000. Until the Iraqi invasion, he said, GM sales to the region were about 15 percent over projections.

Hermiller said GM continues to talk with government officials from Gulf Cooperation Council countries about building a components plant.

The Iraq/Kuwait conflict has not delayed those talks.

Holcomb said Chrysler is re-entering the Middle East with the Chrysler Imperial and New Yorker, Plymouth Acclaim, and Jeep Cherokee and Wrangler.

In the late 1980s, Chrysler exported to the Middle East its rear-wheel-drive Plymouth Gran Fury, Dodge Diplomat and Chrysler Fifth Avenue, which could be converted to burn leaded fuel. Chrysler dropped those cars in 1988.

Jeeps had been on the Arab boycott list for some two decades until the late 1980s.

Now, Chrysler is buying Mitsubishi V-6 engines that can run on leaded fuel for the luxury cars it exports to the Middle East. Wrangler and Cherokee engines can burn leaded or unleaded.

Ford spokeswoman Lin Cummins said Ford has had no problems shipping cars to any Middle Eastern market except Kuwait.

Cummins said Ford does not give sales projections, but she said Ford is anticipating an increase in exports to the Middle East for the next several years.

In Kuwait, several Big 3 dealerships and distributorships have been looted, and vehicles have been damaged.

Some distributorship management people have left.

Late last week, GM said five employees detained in Iraq are safe. For security reasons, Ford does not comment on the whereabouts of overseas personnel.

BIG 3 EXPORTS TO ARABIAN PENINSULA

Table shows North American units exported to Saudi Arabia, Dubai and Kuwait

	GM	Ford*	Chrysler*	Total
1985	31,003	—	300	31,303
1986	18,671	392	300	19,363
1987	25,778	6,598	550	32,926
1988	39,479	14,302	2,000	55,781
1989	42,952	9,550	250	52,752

*Also includes exports to Bahrain, United Arab Emirates, Qatar and Oman

GM Brasil hikes alcohol-powered-vehicle output

By Rik Turner
STAFF CORRESPONDENT

The turmoil in the Middle East has prompted General Motors do Brasil to boost production of alcohol-powered vehicles.

By October, output will increase from 6 percent to 15 percent of total production, said Vice President Andre Beer.

The move marks a reversal of the trend over recent years. Sugarcane alcohol, or ethanol, which powers some 4.5 million autos in the country, has been in short supply. As a result, consumers lost confidence in the fuel and Brazil's auto industry turned to gasoline. In GM's case, production of alcohol-driven vehicles dropped from 90 percent to 6 percent.

Now Brazil is replacing oil lost from Iraq and Kuwait with more expensive oil.

The state oil monopoly Petrobras is calling for huge price hikes, and authorities are considering rationing.

GM do Brasil also has lost between $6 million and $7.5 million worth of pickup exports to Kuwait because of the United Nations trade embargo.

MAZDA

FROM PAGE 3

building. "We'll be able to make all the deals we want."

But Burns said the company's initial ambitions are local. "In the next 12 months we want to own things we can control," he said. "We don't want to have to be on planes all the time."

Some dealers in the area are miffed that another point is being filled in Orange County, where there are already eight Mazda dealers.

"If they are spending what we hear they're spending for a single-point store, they will be hard-pressed to make a dollar on it. I just don't follow the logic," said John Schultz, owner of Holiday Mazda-Oldsmobile in neighboring San Bernardino county. "They must have deep pockets."

Mazda dealer John Campbell, whose Campbell Automotive Group is 50 percent owned by Britain's Lex Service plc, is also curious.

"The point absolutely does not need to be there," he says. "I don't believe that any local dealer would get involved in this because the chance of getting a return on the investment is not that great."

Mazda has no rules regarding franchise concentration, according to a Mazda spokesman. The closest Mazda dealer to Irvine Mazda is less than four miles away.

Burns dismisses the aspersions and says simply that he and Indomobil are "more optimistic about Mazda and the market in general" than some other dealers.

Jay Ferron, a partner at J.D. Power and Associates, Agoura Hills, Calif., says that foreigners investing in the retail car business typically take a long-term view.

VOLVO

FROM PAGE 3

topper next year is 30,000 units, based on supplies of the I-6 powerplant at Volvo's new engine plant in Skovde, Sweden.

The new car was in development for only 24 months at a cost of 2 billion crowns ($350 million). The two-year gestation period puts Volvo in a league with Japanese companies for swiftness, said Volvo Car Corp. Chairman Roger Holtback. But that timetable does not include the new engine, which has been in development for six years.

The 24-valve, double-overhead-cam, 204-horsepower unit replaces the V-6 that Volvo sourced from its engine production joint venture with Peugeot and Renault.

Holtback said the 960 and four-cylinder 940 are the first of a series of three new Volvo models that will be introduced in the first half of the 1990s. The 600 series, pegged as the mid-range successor to the 240, is expected to debut in the second half of 1991.

Volvo is counting on the new 900 to make it more competitive with German cars in Europe. That would reduce Volvo's heavy reliance on the United States, United Kingdom and Sweden; all of those markets are declining.

One notable feature of the 960 and 940 is a patented "integrated child safety seat," a built-in child safety cushion in the rear seat. The center armrest can be adjusted to create a seat for children in the 3- to 10-year-old range.

Automotive News Special Correspondents Knut Moberg and Stig Bjorklund contributed to this re-

Bonneville, Sunbird, Grand Am base model and Trans Sport; $750 on the 6000, LeMans, Grand Prix and Grand Am LE and SE; and $1,000 on Firebird.

In addition to announcing consumer rebates on 1991s, Oldsmobile enhanced its current incentive program with double cash rebates on some vehicles at participating dealerships or 4.8 percent financing on certain 1990 and 1989 models.

Rebates on 1991 models are: $500 on Cutlass Calais and Silhouette; $750 on Calais S, SL and International; $750 on Cutlass Ciera, Cutlass Supreme and 88 Royale; and $1,500 on Toronado.

Rebates on the 1990 Cutlass Calais and Cutlass Ciera have been doubled to $1,500 and $2,000 at participating dealerships.

Buyer rebates on other 1990 Oldsmobiles are $1,000 to $2,500, and there is an extra $500 on 1989 models.

Chevrolet's rebates on 1991 models range from $500 to $1,000 — $500 on Geo Metro and Storm and $1,000 on Geo Prizm; $500 on Cavalier; $750 on Corsica, Beretta and Lumina; and $1,000 on the mid-year 1991 Caprice Classic and Camaro.

Truck rebates are: $500 on the Geo Tracker two-wheel drive; $500 on the Astro (excluding the all-wheel-drive and awd extended models), Lumina APV, G-Van (full-sized), Blazer (full-sized), Suburban, CK pickup and cab chassis (with automatic transmission) and R/V pickup and cab chassis; and $1,000 on the Tracker 4wd.

Rebates on 1991 trucks that are already on the market are $500 on S/T Blazer two-door and $1,000 on the S/T Blazer four-door and S/T pickup.

Chevrolet also raised rebates on 1989-90 Cavaliers from $500 to $750 and on the 1989-90 G-Van from $600 to $1,000.

General Motors Acceptance Corp. said special 4.8 percent financing on terms up to 48 months will be offered on the following 1990 cars: Chevrolet Celebrity and Lumina; Pontiac 6000 and Grand Prix; Oldsmobile Cutlass Ciera and Supreme; and Buick Century and Regal (1991 sedan included).

GMAC also said Buick will offer financing rates of 3.9 percent, 5.9 percent, 7.9 percent and 10.9 percent for terms of 24, 36, 48 and 60 months on all 1991 models except the Regal Sedan.

GM incentive programs include 7.9 percent and 10.9 percent financing for 48 months and 60 months on a wide variety of 1990 and 1991 models.

The low finance rates are offered to consumers in lieu of cash rebates.

SATURN

FROM PAGE 1

new car company, GM aims to compete directly with Japanese makes, and California is a key battleground.

"Clearly, the car itself is more important" and will be the focus of later advertising, Campbell said. "But based on what I've seen of the advertising plan, the first thing they'll try to do is create an image of the people behind the car in order to build some awareness of the Saturn name."

The pre-launch advertising will convey "just how dedicated" the people are who are building this car, said Dugald Yska, vice president for business development for The Winner Group in Wilmington, Del., which holds the Wilmington area Saturn franchise. "People have made significant sacrifices to contribute to the Saturn concept."

Saturn drew most of its employees, including union workers, from volunteers from other GM divisions. They relocated to Spring Hill and took cuts in base pay to do so, with the provision that they will share in the rewards if Saturn succeeds.

"It's safe to say that Saturn is more than a car," said Bruce MacDonald, vice president of communications for Saturn. MacDonald said Saturn is breaking new ground in four areas:

- Partnership between management and the UAW.
- Franchise agreements giving dealers retailing rights to establish multiple outlets over larger-than-usual territories.
- An integrated manufacturing complex in Spring Hill.
- An overriding emphasis on teamwork within Saturn and with its various suppliers.

Saturn's first two models will roll out regionally, starting on the West Coast. Dealers said they expect the cars to be aggressively priced to compete with the likes of Toyota Corolla, Honda Civic and other small Japanese cars.

Dealers are urging Saturn to make a special effort to provide extra cars and incentives to get consumers to test drive the new Saturn models, said Edward Morse, who plans to open Saturn showrooms in West Palm Beach, Tampa and Delray Beach, Fla.

Morse said the Riney advertising agency is expected to assign staff to each dealer region.

Yska said Saturn plans to form dealer groups in areas where there is more than one franchisee.

PRODUCTION

Truck output zooms as GM plants return

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. truck production rose 33.55 percent last week as plants that were idled by the General Motors parts plant strike in Flint, Mich., returned to work.

Truck production was scheduled at 77,411 units. Although up one-third over the prior week, it was 4.79 percent below the 1989 week.

So far this year, 2,613,693 trucks have been produced, 7.18 percent below the year-ago total.

U.S. automakers scheduled 106,425 units last week, 0.75 percent above the prior week but 18.75 percent below the year-ago week.

Year-to-date, 3,959,808 cars have been assembled, 12.80 percent below 1989 car output at this time.

Big 3 workers and the UAW are negotiating new contracts with job security a main issue; current contracts expire Sept. 14.

Last week's scheduled production was shared as follows: GM, 46.59 percent; Ford Motor Co., 15.16 percent; Chrysler Corp., 13.95 percent; Honda of America Manufacturing Inc., 8.25 percent; Toyota Motor Manufacturing U.S.A. Inc., 4.15 percent; Mazda Motor Manufacturing (USA) Corp., 4.02 percent; Diamond-Star Motors Corp., 3.05 percent; New United Motor Manufacturing Inc., 3.01 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.15 percent and Subaru-Isuzu Automotive Inc., 0.67 percent.

All GM car facilities are running except the Willow Run, Mich., plant, which has extended its downtime through this week. The plant was idled earlier because of a canceled export order. This week's extended downtime is due to slow sales. The plant makes Chevrolet full-sized rear-drive wagons.

Ford will resume output at its Atlanta; Kansas City, Mo.; Lorain, Ohio; and Dearborn, Mich., plants this week.

All plants will be closed next Monday for Labor Day.

Car, truck build rises in Canada

Canadian automakers scheduled 21,796 units last week, 76.37 percent above the prior week and 42.72 percent above the year-ago week.

So far this year, 669,669 cars have been assembled, 6.12 percent above 1989.

Truckmakers' targeted production of 14,302 units was 15.75 percent above the previous week but 27.83 percent below the 1989 week.

Year-to-date, 545,382 trucks have been built, 11.30 percent below last year's total at this point.

Ford's Oakville, Ontario, plant resumed output today after closing last week due to a lack of dealer orders.

Also, Volvo's Halifax, Nova Scotia, plant resumed production today. The plant was idled for a two-week vacation.

Chrysler's Bramalea, Ontario, plant was idle last week and also is down this week because of poor sales.

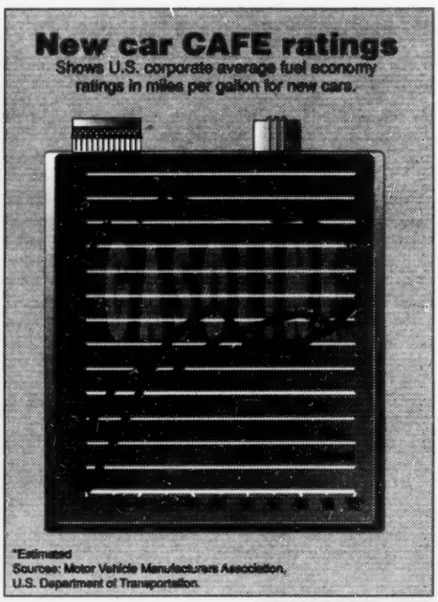
Odds tilt to CAFE bill as Senate faces Gulf crisis

Ralph Nader said that because of Detroit's reluctance to invest in fuel efficient technology, "America has to resort to a military policy."



New car CAFE ratings
Shows U.S. corporate average fuel economy ratings in miles per gallon for new cars.

AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Persian Gulf crisis has given proponents of a 40-plus mpg standard a rising tide of support.

A bill to raise corporate average fuel economy 40 percent by the year 2001 could come to the Senate floor for a vote as early as next week, when the Senate returns from a month-long recess. The chance of its passing is much higher now than before Iraq invaded Kuwait.

The timing couldn't have been worse for the industry, which believes a higher CAFE will cut into profits by forcing car makers to sell lighter, less powerful, less popular cars.

Ford Motor Co. fears that with the November election approaching, the Senate will seize the bill, sponsored by Sen. Richard Bryan, D-Nev., "as a quick fix on fuel conservation and respond in a panicky way," said Jerry ter Horst, who heads Ford's Washington public affairs office.

Consumer advocates have seized the oil crisis as an opportunity to renew the call for a CAFE as high as 50 mpg by the year 2000. The 1990 model-year requirement is 27.5 mpg.

At a press conference last week, Ralph Nader accused the auto industry of destroying a national energy policy. Because of Detroit's reluctance to invest in fuel efficient technology, "America has to resort to a military policy," Nader said.

The industry sees Nader's view as destructive. "If you want to destroy the domestic auto industry, put in a 40-plus CAFE by the year 2000 and you'll do a great job," said David Cole, director of the Office for Automotive Study at the University of Michigan.

Even if a CAFE bill swiftly passes in the Senate, the House will be an obstacle. Rep. John Dingell, D-Mich., has quashed CAFE bills in the House for six years by never letting them out of the House Energy and Commerce Committee, which he chairs.

But the Iraq crisis could press the House subcommittee where a bill similar to Byran's is stranded to hold public hearings on the bill,

SENTRA

Core model last to get restyled

Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

When the all-new 1991 Nissan Sentra is introduced next week in Smyrna, Tenn., Nissan will have made its final — and most important — ugly duckling more swan-like. Since 1988, every vehicle has been redesigned, starting with niche models and ending with the volume leader.

No more 2nd fiddle for U.S., Page 34

The new products — particularly the 300ZX, Maxima and 240SX — share styling cues, performance characteristics and advertising themes, and Nissan's standing has risen in each of those niches.

Now, the company hopes for gains in the vast middle market where Sentra and Stanza compete. Sales of the new Stanza introduced last year are up 68 percent this year, totaling 45,964 through July.

Although redesigned, the Stanza borrowed both platform and engine from other Nissan products and has to swim on its own until 1993, when an entirely new model will arrive. Nissan Motor Corp. in U.S.A. hopes to sell 100,000 Stanzas this year and 150,000 to 200,000 annually by 1993.

General Manager Robert J. Thomas expects to sell 160,000 new Sentras the first year.

Although overall car sales for Nissan Division were down 16.88 percent through July, Nissan makes no apologies for a strategy that gave more attention to flashy niche products than to restyling staid high-volume cars.

"If you're trying to change the image of your franchise, you have to start with the image-laden vehicles. They must speak the truth about your mission," says Robert J. Thomas, Nissan Division vice president and gen-

Auto ventures fade in E. Germany

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — In one euphoric weekend last March, the East German makers of the Trabant, the Wartburg and IFA trucks signed their lives away in joint-venture agreements with Western car manufacturers.

In little more than 24 hours, General Motors, Volkswagen AG and Mercedes-Benz AG virtually annexed East German manufacturers.

Five months later, the picture has changed.

The slam-bang pace of joint ventures in East Germany has been replaced by a new cautiousness that has already caused major automotive projects to be scrapped.

Analyst Edmund Chew of DRI Europe's Frankfurt office says the move away from manufacturing joint ventures doesn't reflect reduced interest in the region so much as a devaluation of the importance of partnerships with existing firms.

"The biggest problem is the flood away from East German goods in the domestic market," he says. "That has made the outlook for those (East German) firms a lot bleaker."

The change underscores the blitz-like pace of events in East Germany. The basis for decisions made last March has already been overtaken by two huge events:

- The currency union this summer, which hikes the price of East German goods and makes labor more expensive.
- The quick decision to merge the two countries on Oct. 3, which will undercut the advantage of having a "local" manufacturing base. West German plants will be plants in a united Germany.

Moreover, Western firms have been perplexed by hopelessly outdated facilities; a dilapidated in-

3-crew setup an issue in GM talks

Lordstown team studied 10-hour, 4-day system in Europe

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

An impending report from the General Motors assembly plant in Lordstown, Ohio, could determine whether GM will be able to persuade union leaders to adopt three-crew production at some GM assembly plants.

Union and GM officials confirmed that a team of union and management representatives from Lordstown and an executive from Detroit returned Aug. 23 from a 13-day trip to Europe to study the system, which generally entails working 10-hour, four-day weeks at straight-time pay.

Now that the UAW has chosen GM as its target company to establish a pattern agreement by the Sept. 14 deadline, establishment of the three-crew

see LABOR, page 4

Canada's auto union will choose target Wed.

By Alex Law
STAFF CORRESPONDENT

TORONTO — The Canadian Auto Workers will choose their Big 3 strike target Wednesday.

CAW president Bob White said the announcement will be made after a meeting of the three bargaining committees. He said the selection of General Motors as the UAW's strike target in the United States does not rule out General Motors of Canada being chosen by the CAW. Contracts with GM, Ford of Canada and Chrysler Canada expire at midnight Sept. 14.

The favorite seems to be Ford, which hasn't been the target since 1976, when there was a four-day strike. Regarding the choice, White said "it gets down to where you think you can make the most progress, maximize pressure and have the shortest strike." The CAW represents 36,500 workers at GM, 12,800 at Ford and 11,300 at Chrysler.

GM races to catch up on air bags

Customer demand prompts maker to outfit all cars by '95

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' customers have sold something to the automaker this time: air bags.

Acknowledging that the inflatable restraints will be a prerequisite for competition in the mid-1990s, GM confirmed last week that virtually all of its domestically designed passenger cars will have at least driver-side air bags by the fall of 1995.

All of the cars that get driver-side bags eventually get the system on the passenger side too, but not necessarily by 1995.

The announcement by GM President Lloyd Reuss means GM is moving quickly to play catch-up on air bags.

With Chrysler and Ford already committed to air bags in all their passenger vehicles — and with customers' dramatic acceptance of air bags in the 1990 model year — GM couldn't afford to do anything else, said officials with air bag supplier companies who did not want to be identified.

GM had lagged behind its domestic competitors in the percentage of cars with air bags in 1990, the first model year the federal government required either bags or automatic seat belts.

Reuss's announcement said nothing about bags in light trucks. Passive restraints are not mandated in light trucks, but federal officials indicate a mandate is likely in the future.

All of the 1991 GM car platforms that offer driver-side air bags also will get passenger-side air bags by 1994, sources said.

Of the other eight platforms, most will get driver-side air bags first and passenger-side air bags later. Reuss said the company has sold about 450,000 cars equipped with driver-side air bags in the 1990 model year and plans to nearly triple that number in 1991 to 1.3 million. Through July this year, GM has been on a pace to nearly match calendar 1989's sales of 3.44 million cars.

Air bags are standard on 46 of 50 GM models on which they are offered in 1991, and standard on all 12 of the models getting the system for the first time.

The only optional air bags in 1991 are on four models of the Oldsmobile 88.

Twelve of GM's 20 passenger car platforms will offer air bags in 1991. As recently as a year ago, GM was withholding air bag commitments on seven of the remaining eight platforms, thinking that passive seat belts would be good enough.

In the regulations for passive restraints for 1990 cars, the National Highway Traffic Safety Administration stipulated that cars with driver-side air bags are not required to have any passive restraint for front-seat passengers until the 1994.

In some cases after 1994, GM may provide a standard driver-side air bag and a manual passive seat belt on the passenger side for one or two model years until a bag can be engineered into the dashboard.

GM's passive belt system, essentially a standard three-point belt mounted on the door instead of the B-pillar, is much less expensive than competitors' motorized passive belts. It is typically disconnected by customers and used as active belts — one of its major criticisms.

But that means GM could use the passive belts for one or two years without a major upset to the interior design or a major expense.

The best time to introduce air bags is a platform redesign, because air bags require a total change in the instrument panel. But the platforms due for makeovers in the 1992 and 1993 model years were too far along in the design process to incorporate changes in the instrument panel for immediate installation of air bags, said a source at Buick.

"On some of the platforms coming out in the next year or two, the decision to give them air bags was made in the last 12 months," the source said. "There just wasn't time to do it at launch."

STANDARD DRIVER-SIDE AIR BAGS PLANNED FOR GM CARS

Model year	Platform	Models
1992	H	Oldsmobile 88 Royale,* Pontiac Bonneville, Buick LeSabre
1992½	D	Cadillac Brougham
1993	S	Geo Prizm
	T	Pontiac LeMans
1994	J	Chevrolet Cavalier, Pontiac Sunbird
	W	Chevrolet Lumina, Pontiac Grand Prix (driver and passenger)
1995	N	Pontiac Grand Am, Buick Skylark, Oldsmobile Cutlass Calais
	A	Chevrolet Celebrity wagon, Pontiac 6000, Oldsmobile Cutlass Ciera, Buick Century
	W	Buick Regal, Oldsmobile Cutlass Supreme (driver and passenger)

Saturn cars will have air bags by 1995.
Driver-side air bag is standard in all other models.

Business booms for safety suppliers

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Safety restraints are a booming industry.

Ford Motor Co. and Chrysler Corp. have already committed to installing air bags in all their cars by 1994, and General Motors now plans to install 1.3 million driver-side air bags in the 1991 model year. The domestic manufacturers have embraced air bags just a year after mass installations began under a federal mandate to have passive restraints in passenger cars.

"Right now, the worldwide occupant-restraints market is about a $3.5 billion industry," said Claude Gianino, a spokesman for TRW Occupant Restraint Systems, a unit of TRW Inc. and supplier of air-bag and seat-belt systems. "By 1995, we expect it to be an $8 billion industry, and much of that increase will be from North America.

"The North American air-bag industry is going to grow over the next five years at a compound annual rate of 45 percent — the fastest-growing area of the worldwide market," Gianino added.

Only three suppliers worldwide can manufacture the pyrotechnic inflators, bag and steering-column module that make up an air-bag system: TRW, Morton International Inc.'s Automotive Safety Products and West Germany's Beyern Chemie. All have been expecting and planning for the growth.

> "We've been increasing capacity because we know all the car companies are going to air bags."
>
> **Claude Gianino**
> TRW spokesman

"We are expanding our assembling facilities and are expanding our gas-generant facilities," said George Kirchoff, Morton vice president for automotive programs. "We have facilitized adequately for the near term, and we have enough capacity for the future."

CIL Corp., the only North American maker of sodium azide, the chemical that generates the gas to fill air bags, also has been gearing up for greater demand.

TRW's Gianino said, "We've been increasing capacity because we know all the car companies are going to air bags. It's not only General Motors, it's everybody — Ford, Chrysler, transplants, anybody who's selling a car in North America."

The National Highway Traffic Safety Administration is expected to expand passive-restraint requirements to light trucks. In anticipation, GM, Ford and Chrysler all have air-bag programs for some passenger versions of light trucks.

With the passive-restraint mandate applied to light trucks, an estimated six million additional vehicles annually would need air bags or automatic seat belts by 1995, Gianino said.

"Most will go with air bags, and that will occur for light trucks between 1994 and 1998," he said.

The rapid expansion in air-bag use also leaves open the possibility for new competitors to TRW and Morton.

Ready to jump in is Takata Inc. Restraint Systems, the North American subsidiary of the powerful and wealthy Japanese company Takata Corp., which commands 55 percent of Japan's market for seat belts and air-bag modules. Takata sells to every Japanese automaker.

Over the past several years, Takata has purchased companies in the United States that give it almost everything it needs to sell air-bag systems in this country. The one thing it lacks is an inflator manufacturing facility, but it plans to build one soon.

"It's a huge market, and there's probably room for everyone — not that we're looking to have other people in there," said a source at an air-bag supplier who did not want to be identified. "I'm sure Takata will get some of the business. They'll go in with a lowball price just to get in."

Officials at Takata, a privately held company that likes its privacy, declined to be interviewed.

LeBaron, Imperial passengers fare poorly in test program

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The passengers of Chrysler's LeBaron convertible and Imperial sedan would likely suffer severe head injuries in a head-on crash of 35 mph, the government said in releasing crash test results. But for drivers, injuries were unlikely.

The LeBaron scored a 2,043 head injury score on the passenger-side and the Imperial rated 2,132 for the passenger. The scores are the highest of the 24 1990 passenger cars tested by the National Highway Traffic Safety Administration.

But scores for the driver side, protected by air bags, were among the lowest at 298 for the LeBaron and 517 for the Imperial.

Also tested in the same class was the Cadillac DeVille four-door, with a driver-side score of 423. There was no data for passenger-side results.

Five other cars were tested in this latest round. NHTSA said that head injury numbers below 750 indicate that head injury is unlikely. Head injury is possible between 750 and 1,250. Above 1,250, head injury is likely.

Buick to price Roadmaster below Park Avenue Ultra

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

NOVI, Mich. — The 1992 Buick Roadmaster will be the largest of the company's sedans but will be priced below the Park Avenue Ultra.

Buick has not settled on the price of the Roadmaster sedan, but it will be positioned under the smaller, front-wheel-drive Ultra, said General Manager Edward Mertz.

200-hp Park Ave. planned, Page 4

When pressed about the target price for the 215.8-inch long Roadmaster sedan, Mertz said, "It will be very reasonably priced."

A source with information about Buick's pricing said the Roadmaster sedan will fill the gap between the Ultra, which carries a base price of $27,420, and the $18,430 LeSabre Limited.

The source, who did not want to be identified, said a price of $22,-

Chrysler Corp.'s 'Spirit'

The image of Chrysler Corp. Chairman Lee Iacocca gets a new twist in a painted mural at the end of the assembly line at the company's Sterling Heights, Mich., plant. The mural, which measures 20 feet by 20 feet, depicts Iacocca, plant manager Dur Roller, left, and plant product manager Buck Hendrickson, right, as Revolutionary War patriots. Beneath their feet lie the badges of Audi, Mazda and Honda. The mural, based on the 19th century "Spirit of '76" oil on canvas by Emanuel Leutze, was painted in 1986 by Margarita Garza, a plant employee. It was updated six months ago by plant employee Mike Robinson after Roller and Hendrickson assumed their jobs.

Ford zeros in on Accord sales lead

Taurus uses bargain option packet to counter higher base price

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division will offer a new value package on its base Taurus sedan in the 1991 model year that will give it more artillery to compete with the Honda Accord in the battle for U.S. car-sales leadership.

Accord and Taurus ranked first and second in car sales last year and held the same spots for the first seven months of 1990. Accord led Taurus by 55,089 sales through July.

The base Taurus L sedan had a $394 sticker price advantage over the automatic-transmission Accord DX in the 1990 model year. But Ford gave away that edge with a hefty $1,016 price increase on the Taurus L for the 1991 model year. Ford officials say the price increase is explained by the addition of a new partially electronic transmission on the 1991 Taurus.

The 1991 Accord DX sedan with automatic went up only $200 and holds a $422 price advantage over the 1991 Taurus L. Automatic transmission is standard on all 1990 and 1991 Taurus models.

Taurus' new value package, L Plus, includes air conditioning, rear window defroster, power lock group and paint stripes. The retail prices of the items in the package total $1,264, but the group has a $300 discount, bringing it to $964.

The retail price of a Taurus L sedan with the L Plus package and an optional 3.0-liter V-6 engine ($521) would be $15,202.

The actual dealer cost, including dealer holdback, for the Taurus L with the L Plus package and the V-6 is $13,121.

Ford said that dealers could advertise the Taurus L Plus sedan at $13,999. The price does not include the destination charge of $480.

At the end of the 1990 model year, the Taurus L is at $12,701, and the Honda Accord DX with automatic transmission is $13,095, not including the $260 destination charge.

Ford Division also is offering cut-rate option packages on the 1991 Taurus GL and LX sedans in its battle with Honda. On those models, Taurus already has a price advantage over the Accord.

TAURUS VS. ACCORD

	1991 Prices	Final 1990 prices
Taurus L 4	$13,717	$12,701
Taurus L Plus V-6	13,999*	—
Accord DX 4	13,295	13,095
Taurus GL 4	14,190	13,174
Taurus GL V-6 (with pkg.)	15,199*	—
Accord LX 4	15,845	15,645
Taurus LX V-6	17,057	16,241
Taurus LX V-6 (with pkg.)	17,852	—
Accord EX 4	17,545	17,345

Germans don't want Trabant any more

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Sales of East Germany's Trabant have been halted in its home market — where buyers once waited up to 17 years for delivery — because no East German will buy the 35-year-old, plastic-bodied relic.

Open borders have caused the market for the car to collapse. And while the Trabant is no longer for sale in East Germany, production continues — but only to fill previous contracts from other Eastern European countries.

"Sales are down to zero," said a Volkswagen AG official assigned to VW's joint marketing venture company with IFA Kombinat Personenkraftwagen, a unit formed to market Trabants and VW, Audi and Seat vehicles.

Instead of buying locally produced Trabants and Wartburgs, East German citizens this year have turned to used cars from the West, buying about 100,000 in the first seven months of 1990, according to estimates.

Earlier this year, the manufacturer suddenly made available 3,-000 Trabants that had not been

see TRABANT, page 14

Trabants are being shunned by East Germans, who prefer buying used cars from West Germany.

Whitehead ends 24-year reign as head of Jaguar in U.S.

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Michael H. Dale will succeed Graham W. Whitehead as president of Jaguar Cars Inc. next month when Whitehead retires after 24 years as Jaguar's top U.S. official.

Dale, 55, has been responsible for sales and marketing since 1973. He has been senior vice president of the U.S. firm since 1985.

Whitehead announced last week that he will retire Oct. 1. He will be 62 on Sept. 13. He has spent 45 years in the British auto industry.

Gene Fisher, chairman of Jaguar's dealer council and owner of Overseas Motors Corp. in Dallas and Fort Worth, said dealers will miss Whitehead, but they welcome Dale as his successor.

Whitehead

Dale

"Graham was a stabilizing influence through BMC (British Motor Corp.), British Leyland or whomever else we did business with," Fisher said. "He was always there, always helpful, and he had a lot of talent."

Under Whitehead's leadership, Jaguar Cars Inc. and its predecessor companies in America have sold almost one million British cars, including marques like MG and Triumph, worth more than $10 billion. He was appointed a Commander of the Order of the British Empire in 1977.

Now, like other European imports, Jaguar is trying to reverse a sales slide that began in 1987. U.S. sales dropped from 24,464 in 1986 to 18,967 last year. Sales through July this year were 10,860, just 23 units ahead of last year.

Whitehead's career has followed Jaguar through a succession of owners, including the British government.

Ford Motor Co. bought Jaguar last February for about $2.56 billion. The Ford takeover should help ease Whitehead's retirement, since his stock and options brought him a profit that could have been more than $1 million.

"He deserves it," dealer Fisher said.

Whitehead began his auto career with Wolseley Motors Ltd. in 1945, moved to British Motor Corp. Ltd. in 1955 and became senior sales executive for BMC (USA) Ltd. in New York in 1959.

He continued in executive posts in this country as the import firm became British Motor Corp./Hambro Inc., British Motor Holdings (USA) Inc. and British Leyland Motors Inc. The U.S. company was renamed Jaguar Cars Inc. in March 1983.

New Ford Escort to test tough European segment

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GSTAAD, Switzerland — Ford Motor Co. has rolled out an important new entry in Europe's largest segment with the launch of the European Escort/Orion subcompact that goes on sale in October.

Ford of Europe invested $1.5 billion in the new line, its highest ever for a product program. Escort/Orion will compete in the lower-medium segment, which accounted for 32 percent of European sales last year — about four million cars.

Ford has capacity for 650,000 of the cars at its plants in Saarlouis, West Germany; Halewood, England; and Valencia, Spain.

Escort/Orion sales totaled about 600,000 last year; the nine-year-old model's best performance was 630,000 units in 1987.

The segment is heavily contested, but Ford's new entry will have the spotlight to itself for a while.

Volkswagen's Golf/Jetta and General Motors' Opel Kadett/Vauxhall Astra were the two best-selling models in Europe last year; new versions of those cars will be displayed at the 1991 Frankfurt show.

Peugeot S.A. plans to enter the segment, hoping to rise from third place to first in European sales. The Citroen FX, once slated for the Paris show in October, is now planned for a Geneva debut next March.

Instead of dribbling out versions of its Escort over several years, Ford of Europe will bring out most of them, including this notchback, in October.

Ford will bring out most versions of its new car at introduction time, including a hatchback, notchback and station wagon. That is a departure from Ford's past practice in Europe of dribbling out versions over several years.

Versions of the new model available immediately include:

- Three-and five-door hatchbacks
- A five-door station wagon
- The four-door Orion sedan
- A convertible co-designed with Karmann in Germany
- A light commercial van.

Werner Kalkert, management board member for product development at Ford of Germany, said a sporty Escort XR31 2000 will be introduced in the first half of 1991 and a 220-horsepower Escort Cosworth Turbo a year later.

The range was designed and developed in Europe and differs from the new U.S. Escort that was co-developed with Mazda. The five-year European project involved 2,500 designers from Ford research and development facilities in Dunton, England, and Merkenich, Germany.

Styling is not radically different from the Escort it replaces, and reaction from the enthusiast press has been mixed.

Ford of Europe has offered advanced aerodynamic designs, starting with the Sierra in 1982, but the company has clearly decided on a more conservative path in the 1990s.

If recent history is a guide, conservative could pay off. The new Fiesta took some knocks from the enthusiast press when it was introduced 18 months ago, but the car set a European record for first-year sales with 540,000.

Helmuth Schrader, chief designer at Ford of Germany, said Ford chose an evolutionary Escort/Orion design over revolutionary treatments because of the past success of the line and clinic research.

Schrader said stylists sought and got greater individuality for the Orion notchback.

Horst Winkler, a Ford of Germany marketing executive, predicted that in Germany, the notchback could rise to 15 percent of the Escort/Orion mix, up from 9 percent last year.

The new Escort has a longer wheelbase and more interior space, but overall length is only slightly greater than its predecessor's. Wheelbase is 99.5 inches, an increase of almost five inches, but length has been increased only 2.8 inches to 159.

Low-priced models are powered by Ford's lean-burning HCS engine that was introduced in 1988. Also offered is Ford's CVH engine range, four million of which have been produced in Europe. A version of Ford's 1.8-liter OHC naturally aspirated diesel engine also is available.

Among numerous features offered for the first time on the European Escort/Orion are electronic anti-lock brakes from Teves, power steering, air conditioning, a new torsion-beam rear suspension, rear disc brakes, near-flush side glass, flush-bonded windshield and rear window.

A 16-valve engine and a turbodiesel, both new to the range, will be available next year.

Ford's Continuously Variable Transaxle stepless automatic transmission is an option with the 1.4- and 1.6-liter CVH engines.

Prices in Germany range from 19,080 marks ($12,300) for the 1.4-liter three-door Escort CL to 34,450 marks ($22,225) for the convertible.

Fiat to idle 35,000

Sales fall in Italy ends decade of go-go

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy — Fiat Auto will idle 35,000 of its 116,000 line workers at various plants in the next four months.

The decision, announced in Rome on Aug. 28 to unions, will represent a production decrease of around 75,000 units, 3.7 percent of 1989 total production.

The move follows decreasing sales in Italy that have caused Fiat Auto's European passenger car inventory to rise from about 185,000 to more than 225,000 units.

Since late 1980, when Fiat Auto started its recovery from near bankruptcy, no plants have been shut except for retooling or rebuilding.

Italian sales for Fiat Auto were down 5.7 percent in June and about 5 percent for July and August, mainly due to Fiat and Alfa Romeo brands.

In the first half of the year, Fiat was down 5.88 percent and Alfa Romeo 6.82 percent. Lancia, thanks to the success of Dedra, was 4.41 up in the same period.

The shutdowns are spread over several months and many plants.

Alfa's Arese plant, with 7,000 workers, will close one week each month through December, cutting production by 10,000 to 12,000 units.

Fiat's Mirafiori and Rivalta plants will close for 3 weeks, and Fiat's Termini Imerese and Lancia's Desio plants will stop for one week; in total, 19,000 workers are involved, and production wil be cut by 65,000 units. Another 9,000 workers in component and subassembly plants will have temporary layoffs.

Four other plants will not close.

Volvo suffers too; 5,000 jobs cut

FRANKFURT, West Germany — AB Volvo last week announced a 54 percent plunge in pre-tax profits for the first half of 1990 and said it will cut 5,000 jobs by the end of 1991. In addition, Volvo GM Heavy Truck Corp. is planning layoffs at its New River Valley plant in Dublin, Va.

Volvo said pre-tax profits dropped to 2.06 billion Swedish kronor ($360 million) from 4.48 billion ($782 million) in the first half of 1989. The company blamed reduced demand in its three biggest markets: the United States, Great Britain and Sweden.

Swedish car plants, which employ about 23,000, will absorb about 80 percent of the planned manpower cuts.

The New River Valley plant will lay off 350 workers out of a total workforce of 1,500 as production is pared back from 60 trucks daily to 42 beginning in mid-October. Volvo said U.S. heavy truck sales fell 28 percent to 7,200 units in the first half.

Volvo said worldwide new-car deliveries declined 3.9 percent to 198,000 units in the first half; U.S. car sales fell 8.5 percent to 56,939 through July.

Volvo profits also have been undercut by heavy investment in new car models, including the just-introduced 960/940 line and the replacement for the 200 series expected next year. Declining productivity in its Swedish workforce also was cited as a factor.

— Richard Johnson

Honda slips past Chrysler in Canada sales

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Honda's combined sales of North American-built and imported cars in Canada topped Chrysler Corp.'s total in July, putting Honda in third place and dropping Chrysler to fourth for the first time.

Honda sold 3,043 North American-built cars and 5,400 imports in July for a total of 8,443.

Chrysler sold 7,043 North American cars and 936 imports for a total of 7,979.

Overall, sales of North American-built cars increased in July; sales of imports dipped slightly.

General Motors did the best among the Big 3 in North American car sales, up 7.79 percent. Ford Motor Co. slipped 12.40 percent, and Chrysler dropped 4.01 percent, compared with July 1989.

The year-to-year increase for North American-built cars — including Honda, Hyundai, Mazda and Volvo was 4.22 percent, but seven-month sales were down 10.69 percent.

No breakout was available for Toyota and Suzuki on sales of North American-built and imported vehicles.

In commenting on July sales, Bill Atkinson, vice president of marketing for GM of Canada, said, "In the midst of an overall soft market, we experienced sales increases throughout our product lineup."

He said the Chevrolet Cavalier is now the best-selling car in Canada.

Import sales were down 301 cars in July, from 26,743 to 26,442. Only six of the 18 importers reporting showed increases:

- Volkswagen was up 29.13 percent
- GM increased by 28.36 percent
- Mazda sales were up 27.73 percent
- BMW sales increased 24.03 percent
- Suzuki sales were up 21.20 percent
- Honda sales increased by 2.74 percent.

Total car sales were up 2.25 percent for July but were down 7.81 percent for the first seven months of this year.

Sales of North American-built trucks held steady for the month at 28,882 compared with 28,879 in July 1989. Imports gained 7 percent. Total truck sales for the month were up 412 units, or 1.19 percent.

Total car and truck sales in July were up 1.90 percent over July 1989, but down 8.31 percent for the first seven months of this year.

Peterbilt's new sleeper boxes

Peterbilt Motors of Newark, Calif., has two new 48-inch sleeper boxes, a high-roof and a standard-sized version, for its long-haul conventional models. Their 48-inch length provides floor space for dressing, and each has full-length closets. The high-roof version provides stand-up room for drivers of average height.

Navistar International hikes engine torque, horsepower for '91

CHICAGO — Navistar International Corp. is offering higher horsepower and torque ratings in its 1991 engine lineup.

The new engine offerings are designed to improve driveability and to provide more power for better operating efficiency, said John Toole, manager of product planning for Navistar Engine and Foundry Division.

Navistar produces a broad line of truck engines in the 150 to 275 hp range. They include the DT/DTA 466, DT/DTA 360 and 7.3-liter V-8 engine series.

The DT 466 and DTA 466 are in-line six-cylinder, open-chamber, direct fuel injection, 7.6-liter displacement engines. They feature a premium wet-sleeve design.

The engines are available in International 2000, 3000, 4000, 5000 and 7000 series medium- and heavy-duty trucks.

For 1991, the DT 466 is available for the first time with 195 hp at 2,400 rpm and 520 pounds-feet of peak torque at 1,600 rpm.

A second version of the DT 466 continues to be available with 210 hp at 2,400 rpm and 570 pounds-feet of peak torque at 1,600 rpm.

The turbocharged and air-to-air intercooled DTA 466 is available with 270 hp at 2,400 rpm, with a higher peak torque of 795 pounds-feet at 1,600 rpm.

Another version of the DTA 466 is rated at 250 hp at 2,400 rpm with 700 pounds-feet at 1,600 rpm.

There are two versions of the DTA 466 available at 220 hp at 2,400 rpm: one rated at 600 pounds-feet peak torque at 1,600 rpm, and a second at 650 pounds-feet of peak torque at 1,600 rpm.

> The new engine offerings are designed to improve driveability and to provide more power for better operating efficiency.
>
> **John Toole**
> Navistar

The turbocharged DT 360 and turbocharged and air-to-air intercooled DTA 360 diesel engines continue to be available for the International 4700 series medium-duty trucks and 3800 series school bus chassis.

Like the DT 466/DTA 466, both the DT 360 and DTA 360 feature a premium wet-sleeve design.

The DT 360 continues to be available with 170 hp at 2,700 rpm and 400 pounds-feet of peak torque at 1,700 rpm.

Two DTA 360 versions are available with 185 hp at 270 rpm: one with 445 pounds-feet peak torque at 1,700 rpm; the other with 485 pounds-feet peak torque at 1,700 rpm. Both are in-line, six-cylinder, open-chamber, direct fuel injection engines with 5.9-liter displacements.

The 7.3-liter diesel is a compact, lightweight, naturally aspirated V-8, available for International 4600 medium-duty trucks and 3700 school bus chassis.

All 1991 International engines are in full compliance with 50-state emissions standards.

TRUCK BRIEFS

ADP buys Ultimate Roads

CHICAGO — ADP Dealer Services, a division of Automatic Data Processing Inc., has purchased the assets of Ultimate Roads from Ultimate Corp.

Dallas-based Ultimate Roads provides computer hardware and software services to almost 400 heavy-duty truck and trailer dealerships in the United States.

ADP Dealer Services supplies computer systems to more than half of the heavy-duty truck market in the United States.

ADP said it would retain the Ultimate Roads management team and staff. All current Ultimate Roads clients will continue to be serviced by the group in Dallas.

Distributor profits dip

LIVONIA, Mich. — Net profit before taxes for the typical truck equipment distributorship dropped to 1.6 percent in 1989, down from 1.7 percent the previous year, according to a survey by the National Truck Equipment Association.

Even the high profit distributorships — the top 25 percent that scored higher marks in all critical areas of measurement — saw profit margins drop to 5.0 percent, compared with 5.1 percent in 1988, according to the association's 1990 Distributor Profit Survey Report.

Sales growth for the 149 firms responding to the survey dropped dramatically to 4.20 percent in 1989, down from 11.50 percent the previous year. The companies' sales had grown 9.00 percent during 1988 and 8.40 percent in 1987.

New used-truck program

KIRKLAND, Wash. — Kenworth Truck Co. has introduced its Elite used-truck program at participating dealerships. Dealerships involved in the program test and recondition used trucks.

Kenworth developed the program because used vehicles account for 45 percent of all heavy-duty trucks purchased in the United States, said Jon Wyman, Kenworth's national used-truck manager.

Used trucks involved in the Elite program have mechanical and structural checks performed with necessary components replaced if required.

Kenworth also provides an Elite Buyer Protection Plan under which it will back selected used Kenworth and Peterbilt models with a one-year, 100,000-mile, limited protection plan. The plan covers major components, cabs, sleepers and frames.

Nissan and Adesco settle service contract dispute

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Motor Corp. in U.S.A. has reached an out-of-court settlement with its former in-house extended service contract administrator, Adesco Inc., ending a messy legal feud that included allegations of fraud and bribery. Terms of the settlement were not disclosed.

The imbroglio began in 1988 when Adesco of Tulsa, Okla., threatened to terminate several Nissan dealers in Florida it claimed submitted fraudulent repair claims for payment.

Nissan sued Adesco in California for breach of contract and not administering claims properly. Nissan obtained an injunction in U.S. District Court for the Central District of California that stopped Adesco from terminating dealers.

Adesco then sued the dealers in Florida for allegedly submitting false claims. Adesco also countersued Nissan, claiming there was a nationwide conspiracy by Nissan dealers to file inflated claims.

Nissan answered with an amended complaint, asking to take over the dealers' existing extended service contracts for administration. Nissan claimed Adesco failed to administer the claims properly.

In April 1989, Nissan brought fraud charges, alleging that Adesco bribed a former Nissan employee to obtain the contract to administer its extended service contracts.

A lawsuit against that employee, Fred Gramcko, by Nissan is pending in the San Diego County Superior Court. The automaker claims Gramcko violated his duties of loyalty to the company and accepted bribes. He has filed a wrongful discharge suit against Nissan.

In July, U.S. District Court Judge William Rey ordered a trial on Nissan's charges that Adesco obtained the contract fraudulently.

But two days into the trial, the companies reached a settlement. Part of the settlement is that Adesco's lawsuit against the Florida dealers will be dropped.

Nissan is selling and administering its own extended service contracts and those sold by Adesco.

There is an exception — extended service contracts sold before October 1988 are being administered by American Warranty, based in Lincolnwood, Ill.

Ironically, American is on the verge of collapse. But an attorney for Nissan said claims are being paid because they are backed by Nissan.

Golf	$500	Dec. 31
Volvo (1989-90 models)	$200-$600, based on number sold	Sept. 30

*Customer rebate or dealer rebate; dealer's choice
**$3,000 in California
Note: Some makers offer rebates to dealers on sales of 1988 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

Toyota income up 27.4% for fiscal 1990

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota Motor Corp. reported a 27.4 percent increase in consolidated net income to 441.3 billion yen ($2.8 billion) for the fiscal year ended June 30.

Net sales for the period were up 14.6 percent to 9.19 trillion yen ($60 billion), and operating income rose 37.4 percent to 642.9 billion yen ($4.2 billion).

Toyota attributed the increase to growth in sales worldwide, but particularly in Japan. The home market is the company's largest, and sales were supported by six full model changes and five all-new model introductions.

Toyota said it expects brisk sales to continue in Japan market, but anticipates more difficult conditions in the United States and Europe. Even so, the company forecasts a 4 percent growth in domestic sales this fiscal year, to 2.5 million units, and a 7.6 percent growth in exports, to 1.7 million.

Although Vice President Masami Iwasaki acknowledged the possibility that the Persian Gulf crisis might affect oil prices and interest rates, he said it is still too soon to determine exact effects. So far, he said, there is no apparent effect on the Japanese market.

Domestic production for the fiscal year was up 0.5 percent to 4,028,149 units, while overseas output rose 83.5 percent to 607,662.

Buick marches in GM parade of rebates on '91s

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Buick has joined Oldsmobile, Chevrolet and Pontiac in offering consumer rebates or, in lieu of the cash, cut-rate financing on most of its 1991 models even before their official introduction Sept. 27. Dealers have permission to sell those vehicles as they receive them.

The rebates run through Sept. 26 and are based on the option package selected. The payments are $250 to $1,000 on the Skylark, Century and LeSabre; $500 to $1,250 on the Regal; and $1,000 on the Riviera.

In lieu of cash, Buick will offer through General Motors Acceptance Corp. finance rates of 3.9 percent, 5.9 percent, 7.9 percent and 10.9 percent for terms of 24, 36, 48 and 60 months on all 1991 models except the Regal sedan, Reatta, Park Avenue and Park Avenue Ultra.

On the 1991 Regal sedan and 1990 Century and Regal, the finance rates are 4.8 percent for loans of 24, 36 and 48 months and 10.9 percent for 60 months.

In dealer incentive programs, Volkswagen United States Inc. extended the $500 payback on the 1990 Golf through Dec. 31, and Volvo Cars of North America extended through Sept. 30 payments of $200 to $600 on 1989-90 models, based on the number sold. The VW and Volvo programs had been scheduled to expire Aug. 31.

Car output at 4 million, trails 1989

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. automakers produced their four-millionth car of the year last Tuesday. In 1989, the four-millionth auto was built July 21.

Year-to-date, U.S. car production is 4,082,839, 12.42 percent behind last year.

Last week U.S. automakers' scheduled output was 124,039, 17.67 percent above the previous week and 1.96 percent above the year ago week.

Year-to-date, U.S. truck production is 2,689,250, down 7.00 percent from last year at this time.

Truckmakers scheduled 75,664 units last week, 2.12 percent below the prior week's total and 8.13 percent above the same week in 1989.

Estimated car production was split last week as follows: General Motors, 43.15 percent; Ford Motor Co., 24.62 percent; Chrysler Corp., 14.03 percent; Honda of America Manufacturing Inc., 7.02 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.56 percent; Mazda Motor Manufacturing (USA) Corp., 2.85 percent; Diamond-Star Motors Corp., 2.59 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.20 percent; Subaru-Isuzu Automotive Inc., 0.60 percent and New United Motor Manufacturing Inc., 0.38 percent.

Ford has extended the downtime at its Dearborn, Mich., assembly plant an additional two weeks. The plant was idled the week of Aug. 13 and is not scheduled to resume production until Sept. 10.

The additional downtime is due to a parts shortage related to start-up on the revised 2.3-liter engine. About 2,100 hourly workers are employed at the facility, which builds about 3,700 Mustangs per week.

Chrysler idled the Grand Wagoneer line at its Toledo, Ohio, plant last week because of high inventories at dealerships.

NUMMI scheduled a rolling model changeover last week. Production of the 1991 models is expected to begin tomorrow. NUMMI builds the Geo Prizm and the Toyota Corolla.

Chrysler Corp. has scheduled daily overtime this week at four assembly plants: Belvidere, Ill.; Sterling Heights, Mich.; Toledo, Ohio; and St. Louis No. 2.

All U.S. car and truck facilities are closed today for Labor Day.

Canada cars ahead of 1989

Canadian automakers scheduled production of 22,094 cars last week, 4.49 percent above the prior week and 31.08 percent above the same week last year.

Year-to-date, Canadian automakers have produced 691,111 units, 6.99 percent above 1989.

Truckmakers' targeted production of 15,953 units rose 6.62 percent above the previous week, but dropped 17.91 percent below the year-ago week.

So far this year, 561,995 trucks have been produced, 11.39 percent below the total at this time last year.

Biggest service-contract firm loses insurer, folds

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Group International, the nation's largest independent administrator of vehicle service contracts, folded last week after failing to find an insurer to underwrite its contracts.

The company — led by Jerry Farrar, its high-profile president and a founder of the extended warranty industry — joins a string of extended service contract companies that have shut down in the last three years.

Settlement of claims will continue under the supervision of General's current underwriter, Maryland Casualty Insurance Co.

The insurer, based in Baltimore, has hired General's claims and data processing staff of about 140 people. General's remaining 140 employees will be laid off.

"Since the major portion of our revenues comes from sale of vehicle service contracts, we had no alternative but to cease the company's operations," Farrar, 52, told *Automotive News*.

General, based in Harbor City, Calif., had become the largest administrator in the industry, with 65 general agents employing 400 sales agents. The company sold contracts through 7,500 new-car dealers. Farrar said the company has 1.7 million contracts in force and a premium reserve fund of $200 million to pay claims.

George Cass, executive vice president of Maryland Casualty, declined to estimate the amount of Maryland's potential underwriting losses on General's service contracts because the last one won't expire until 1997.

Asked if the insurer will lose money on the General contracts, he said: "Absolutely, we will suffer losses. All of our actuaries clearly point to red ink."

Cass said Maryland will continue to underwrite the business sold by dealers of all General's business until Oct. 15, when they will have to find another carrier.

At its peak in 1989, General sold 500,000 service agreements representing sales of $240 million.

Industry officials say General's demise will be less tumultuous for dealers than other administrator closings.

Pontiac excitement

John Middlebrook, Pontiac general manager, took the stage at a Detroit nightclub last week to introduce the 1991 models. Details of Pontiac's plans for the 1991 model year, along with those for Cadillac and Oldsmobile, begin on Page 2.

Iveco's U.S. pullout stuns dealer network

By Joseph Bohn
TRUCK EDITOR

Iveco SpA, of Torino, Italy, stunned its North American distributor organization and dealer network last week by surreptitiously announcing it would pull the plug on U.S. operations in mid-1991 after 13 years of operation.

Iveco, after helping popularize Class 3, 4 and 5 low-cab-forward diesel trucks, fell victim to the onslaught of Japanese competitors that entered the market during the last five years.

Nine competitors marketing low-cab-forward models will remain when Iveco drops out. Only Ford Motor Co. plans to build such a truck domestically next year, but several U.S. manufacturers produce conventional trucks in Classes 3 through 6. Low-cab-forward trucks position the driver over and ahead of the front axle, but they are much smaller than Class 8 tractors of the same design. In conventional trucks, drivers sit behind the engine and front axle.

"I'm stunned," said Dave Busby, summarizing the feelings of Iveco's 160 dealers.

"We put 10 years into the franchise," said Busby, owner of Draco Trucks, of San Diego. "I'm speechless."

Busby noted that Iveco of North America officials repeatedly had said they were not going to pull out of this market. "They were saying they would have a full line and were serious about this market," Busby said.

Lutz, Gorman to address '91 World Congress kickoff

DETROIT — Chrysler Motors President Robert Lutz will deliver the keynote address at the 1991 Automotive News World Congress, to be held Jan. 13-16 at the Westin Hotel in Detroit.

TRW Inc. Chairman Joseph T. Gorman also will address the Sunday night opening session.

Lutz

Gorman

The 15th Automotive News World Congress, co-sponsored by *Automotive News* and the University of Michigan Transportation Research Institute, will be held in conjunction with the North American International Auto Show and is expected to attract automotive leaders from around the world.

During the four-day event, internationally acclaimed experts and executives from the manufacturing and supplier communities will present insights into the tumultuous worldwide auto industry of the 1990s.

Keynoter Lutz is known in the industry as a "product guy." He loves high speeds, and his passion for cars was most recently evidenced when he championed development of the V-10 Dodge Viper sports car.

Lutz now is in the running to succeed Chrysler Corp. Chairman Lee Iacocca. Lutz joined Chrysler in 1986 as an executive vice presi-

MORE POWER, LESS TIME

Ford's plans for the '90s include shorter product cycles, new powertrains and attention to some aging platforms

This article is the first in a series over coming months exploring 1990s product plans of the U.S. Big 3 and Asian and European importers.

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s future product schedule for the 1990s shows shorter product cycles and new powertrains as the No. 2 automaker tries to protect its market share from foreign and domestic competitors.

Ford will substantially redesign many of its models after three or four years to be more competitive with Japanese automakers. But the company will match the Japanese with their

Ford welcomes CAW targeting; White talks strike

By Alex Law
STAFF CORRESPONDENT

TORONTO — Ford Motor Co. of Canada was named the strike target last week by a strike-talking Canadian Auto Workers President Bob White.

"I don't know if we can do this without a strike," he said. "I think these negotiations are going to be very difficult, the most difficult since the early 1980s."

UAW, GM talks down to the wire, Page 58

White said Ford has "ridden on the coattails" of Chrysler Canada and General Motors of Canada long enough, since the last time Ford was a target in 1976. Contracts covering 63,000 workers at Ford, Chrysler and GM expire Sept. 14, the same day the UAW's U.S. contracts expire.

> "I don't know if we can do this without a strike. I think these negotiations are going to be very difficult, the most difficult since the early 1980s."
>
> **Bob White**
> Canadian Auto Workers

White said there was a strong chance of strikes on both sides of the Canada-U.S. border since the UAW picked GM as its target.

White's description of the UAW-GM contract talks is in stark contrast to that of UAW President Owen Bieber, who described GM as the settlement target, not "strike target." Little news has emanated from negotiation rooms since the UAW and GM began talking in earnest Aug. 28.

White was not quiet. He told union negotiators that there would be "a big jumbo strike" between the UAW and GM. He said he ruled GM of Canada out as a strike target for that very reason, since Canadian plants will shut almost as soon as American plants if there is a strike in the United States.

"I think our members would question our intelligence if we chose GM," White said.

For its part, Ford said it "welcomes the opportunity to set the Canadian pattern for a new contract in the industry and will work toward reaching a fair and realistic agreement before the Sept. 14 deadline."

Don McKenzie, Ford's chief negotiator, admitted that "the two negotiating teams face a difficult task" to settle without a strike."It is not impossible to reach a settlement before the deadline," he said, "but we are going to have to work very diligently in the time remaining if we are going to make it."

White said there was "no persuasive argument for not going to Ford. We've been to Chrysler several times. We've been to GM several times." There was a 12-day strike against GM in 1984 and a week-long strike against Chrysler in the last negotiations in 1987.

Ford has not put a proposal on the table yet, but the CAW is looking for percentage increases rather than lump-sum payments in each year of a new contract, plus full cost-of-living protection, greater job security and more time off.

Late-August sales trail '89; month shows drop of 17%

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Sales of both cars and light trucks declined for domestic automakers as new-vehicle deliveries slid 21.01 percent in the last 10 days of August, compared to the same period a year ago.

For the entire month, total vehicle sales, including imports, were off 16.96 percent from August 1989. There were 27 selling days in the month this year and last, but August 1989 sales were spurred by a plethora of fat incentive programs to reduce swollen inventories. August was the highest month of 1989 for car sales.

Truck sales, the saving grace for some of the makers this year, were down across the board in the final period of the month. Only transplant automakers Honda, Mazda, Mitsubishi and Toyota had higher car sales among domestic car producers.

A total of 387,389 cars and trucks were sold during the 10-day period, which had the Middle East crisis on its back and fewer incentives than last year. The late-August period had 10 selling days both years.

"Sales typically spurt ahead in the final 10-day period," said Tom Webb, chief economist for the National Automobile Dealers Association. "With consumer confidence low, the economy so weak and the potential for destabilizing events so high, we see little hope for an immediate turnaround."

SECONDHAND OLDS

New buyers wooed with used-car warranty plan

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

The Oldsmobile Edge now is a double-edged blade that dealers can use to carve a bigger base of customers from people whose first cars are purchased through used-car departments.

The Value-Rated Edge used-car program is patterned after the new-car program that Oldsmobile introduced last year. The new plan was announced by General Manager J. Michael Losh at a media preview of 1991 Oldsmobile products. Pontiac and Cadillac also held previews last week.

Oldsmobile revamps 98 for 1991, Page 10

Value-Rated Edge will operate on two levels: Value-Rated Plus, covering only used 1990 and 1991 Oldsmobiles, and Value-Rated, covering any brand of used 1984 to 1991 vehicle.

The Value-Rated program offers three basic elements that are similar to Oldsmobile Edge:

- A 12-month, 12,000-mile warranty similar to Bumper-To-Bumper Plus, with deductibles applicable in many cases
- At least one year of coverage under the Roadside Assistance Program
- A guaranteed satisfaction program that involves no-deductible repairs for "reasonable component failures" that occur in the first 30 days or 1,000 miles of ownership.

Oldsmobile is looking for long-term gains from the Value-Rated plan, Losh said. Designers of the plan hope to woo people who don't want to pay full ticket for a new car, or parents who are buying a first car for their children.

Ultimately, Oldsmobile hopes the buyer of the nearly new car will buy new the next time. In the other scenario, parents may be shopping for a new car themselves at the same time they are buying a used vehicle for their children, and the children could become the next generation of Oldsmobile buyers.

The plan recognizes that used cars are an important part of a dealer's business, while giving Oldsmobile dealers an advantage in that market, Losh said.

The new program will be available only at dealerships that pay to participate, unlike the Oldsmobile Edge program. Losh said he expects dealers would fold their cost for the program into the price of the used car.

Also at the media preview, Losh said he believes Oldsmobile sales are headed up after bottoming out in 1990. Although he admitted being wrong last year when he said the same thing about 1989, Losh said there are good indications of an upswing now.

He predicted that the new Bravada sport-utility, 98 luxury sedan and Custom Cruiser wagon should help Oldsmobile raise its market share by a half percent.

Losh said his overly rosy outlook last year "miscalculated the intensive competitive pressure in the market, and also the downturn in the market."

Slow startups with the Toronado and Silhouette minivan also contributed to a down model year in which Oldsmobile will sell 507,000 cars and 21,000 vans.

Those figures translate to a 5.5 percent share for cars and 0.5 percent for light trucks, he said, adding that Oldsmobile's

Japanese prices move up

Toyota, Nissan rise about 2% on carryover models

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The leading Japanese auto retailers in the United States are tacking modest price increases onto their 1991 models, and it appears their peers will follow suit.

Last week Toyota Motor Sales U.S.A. Inc. said it will raise prices an average of 2.3 percent, or $318, over comparably equipped 1990 models. Nissan Motor Corp. in U.S.A. said prices will go up an average of 1.8 percent, or $290.

But there was an asterisk on each: Toyota didn't include its new Tercel, which will be priced later. Nissan omitted its new Sentra. The base Sentra two-door has risen $600. It's now $7,999. Other Sentra model designations have been changed for 1991, making comparisons with 1990 difficult.

American Honda Motor Co. Inc. has announced prices only for the Accord. They are up $200. Honda will announce Civic and Prelude prices Sept. 20. "We don't expect to have any major increase," said a spokesman.

Those increases compare with hikes of 0.9 percent ($135) for Chrysler Corp., 2.3 percent ($389) for General Motors and 3.2 percent ($528) for Ford Motor Co.

According to analyst Maryann Keller, managing director of Furman Selz of New York, comparing domestic and import price increases is tricky business.

"With all the crazy option packages, option changes, rebates and incentives on the domestics, it's hard to tell what's a bargain," she says. "The Japanese strategy is to keep pricing relatively simple. Maybe they know something about the buyers who are fed up with this absurd game."

The Japanese pricing announcements come with the yen at its 1990 high against the U.S. dollar. Late last week, the yen was trading at 141 per dollar.

A stronger yen generally puts more pressure on Japanese importers to raise U.S. prices, but Keller says they will sacrifice profits for sales.

"The Japanese have their sights set on one thing: that's market share," Keller said. "They've lost money before and they'll do so again, but that's not their first concern."

But an argument against the need for a Japanese price increase is the fact that the yen has been weaker than expected since the 1990 models were introduced a year ago, which has meant higher profits for the Japanese importers in this country.

Toyota price increases, figured on comparably equipped base models, are: Corolla, up $250 to $8,998; Camry, $360 to $11,948; MR2, $250 to $15,148; Celica, $300 to $12,698; Supra, $960 to $23,820; Cressida, $700 to $22,198; Previa, $400 to $14,398.

In addition to the base Sentra two-door, the entry-level 1991 sedan is $9,100, and the top-of-the-line four-door is $12,750.

Nissan vice president and general manager Robert J. Thomas stresses that the Sentra sales strategy will focus on value-for-the-dollar, not low price.

Price hikes for other Nissan lines include: Stanza, up $250 to $11,900; 240SX, $360 to $13,609; Pathfinder, $400 to $16,120.

Nissan will announce 1991 Infiniti prices tomorrow. A company spokeman said the increase will average 2.5 percent. The new G20 sedan is expected to be priced lower than expected at about $17,500. Toyota's Lexus Division raised the price of the LS400 by $2,000, plus a boost of $1,000 in May.

Mazda Motor of America Inc. will announce its 1991 prices this week. A spokesman said any increases "will be relatively modest."

Mideast turmoil puts mpg in 1991 ad spotlight

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Bracing for the possibility of a fuel crisis as a result of problems in the Middle East, Cadillac will tout fuel economy as a major selling point in its 1991 ad campaign.

Using its "Cadillac Style" theme as a backdrop, the luxury car division has integrated its 26-mpg highway rating into all its ads, said Peter Levin, director of advertising.

In light of the Middle East crisis and gasoline prices fast approaching $1.50 per gallon, other General Motors divisions also use new 1991-model ad campaigns to play up fuel efficiency.

While contending that their buyers are willing to pay more for the appointments and power of a luxury car, Cadillac and Buick stress that contemporary vehicles are much more fuel efficient than those they sold during the fuel crisis created by the Organization of Petroleum Exporting Countries' embargo in the mid-1970s.

Said Buick General Manager Edward Mertz: "There's no need to go from a very long car to a very small car. We can't squeeze everybody into a Geo Metro."

Oldsmobile and Pontiac seem to be playing it safe.

Oldsmobile, in a new 15-second ad, features its 1966 442 model along with the 1991 version. The voice over explains that the 25-year-old car got 16 mpg on the highway and went from 0 to 60 mph in eight seconds. The 1991 model, the announcer says, gets 30 mpg and goes from 0 to 60 mph in seven seconds.

Oldsmobile General Manager J. Michael Losh said the division did not create the ad because of the threatened fuel shortage, but because research indicates that fuel efficiency is among the concerns of consumers.

Pontiac has designed its 1991 ads with what it calls "creative flexibility," allowing it to integrate fuel economy information into existing ads, said Pontiac General Manager John Middlebrook. He also said that the 1991 Grand Am and Sunbird "react very well to the fuel economy problem. We're in excellent shape."

Spokespersons for Ford Division and Lexus said those manufacturers will continue to monitor the fuel situation but currently have no plans to alter their strategies.

Chevrolet and Chrysler Corp., which have yet to unveil 1991 marketing plans, declined to comment.

Hostages held for Passat parts

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Iraq is demanding a shipment of auto parts in exchange for 18 hostages who work for Volkswagen do Brasil in Iraq.

The parts, which fit the 160,000 Passats in Iraq built by Volkswagen do Brasil, were en route by sea to Iraq when Saddam Hussein invaded Kuwait and the United Nations ordered an embargo on trade with Iraq.

The Iraqi demand for the auto parts is the latest obstacle raised to the release of the VW employees.

Earlier, the government had refused to grant exit visas to the workers on the pretext that the contract between Baghdad and Autolatina had not been fulfilled.

Autolatina last week rescinded the contract with Iraq's state-run General Automobile and Machinery Co. and says the matter is now in the hands of Brazil's foreign ministry, which is honoring the embargo.

Autolatina is the Volkswagen-Ford Motor Co. joint venture in Brazil and Argentina.

Japan shifting to right-hand drive imports

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Ken Urushibara bought a Packard convertible in 1951 and through the years had one American car after another in his garage, never minding that the steering wheel was on the wrong side. Passing on the highway was "a bit awkward," he said, but it was easier to park.

He recently sold his last American car, a Chrysler New Yorker he bought in 1982. Given the option now, he said he would always prefer right-hand drive in Japan.

In increasing numbers, Japanese buyers of imported cars are opting for right-hand drive to be in tune with the country's traffic driving on the left. The change reflects how the import segment has grown from an exotic arena to part of the real mass market.

European carmakers are leading the move to satisfy demand for right-hand-drive imports. America's Big 3 are ignoring it. Only Honda sells right-hand-drive cars made in America.

Although it is changing quickly, most import buyers still choose left-hand drive. In the fiscal year that ended March 31, 61.5 percent of the 169,150 units imported were left-hand drive, according to the Japan Automobile Importers Association. That was a decline from 66.2 percent in the previous fiscal year, when imports totaled 120,453.

Japanese commentators have long argued that one reason Americans sell few cars in Japan is that they do not bother to produce cars with right-hand drive.

For instance, Japanese translator Hiroshi Takami, writing in *Automotive Week*, a sister publication to *Automotive News*, noted that in Japan, drivers must pay tolls on most roads. "Toll booths are always on the right side to suit the left-side traffic rule. . . . I wonder if (Lee Iacocca) realizes the nuisances Chrysler drivers have to endure at toll booths. . . . Even a small company like Porsche is now exporting cars with right-hand steering."

Historically, the left-hand nature of the import market in Japan is an indication of its limited size. Last year, imports made up only 3.9 percent of the total market of 4.3 million.

Even Honda did not bother importing right-hand-drive cars initially. And several European makers, which make right-hand-drive cars for the British market, did not send them to Japan. "You never had to," an official of one European company said.

Standard thinking among manu-

Lamm, Riesenbach quit Subaru posts

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

Lamm

Riesenbach

NEW YORK — Fuji Heavy Industries has appointed Takeshi Higurashi, a 36-year Fuji veteran, to replace Harvey H. Lamm as chairman of Subaru of America Inc.

Masaharu Masumitsu, whom Fuji appointed Subaru vice chairman last spring, will remain in that job and will acquire Lamm's chief executive title. He and Thomas R. Gibson, who remains president and chief operating officer, will oversee Subaru's day-to-day operations.

Lamm, 54, who co-founded Subaru of America in 1968, announced his resignation as chairman and chief executive officer last week, shortly after Subaru became a wholly owned subsidiary of Fuji. Marvin S. Riesenbach, 60, executive vice president and chief financial officer, also said he will take early retirement at the end of Subaru's fiscal year, Oct. 31.

Fuji's purchase of the 50.7 percent of Subaru it didn't already own became effective Aug. 31. Lamm resigned the next business day, Sept. 4.

Subaru said in a statement that Lamm stepped aside "to provide a clear path for the strategic and operational integration of the manufacturing, product development, and sales and marketing arms of the new enterprise."

Subaru of America hasn't posted an annual profit since 1986, and its vehicle sales have declined every year since then. But it has shown a profit for

PEOPLE POWER

Effort to build affordable car nurtures growth of auto industry in Philippines

By Stephen Vines
STAFF CORRESPONDENT

MANILA, The Philippines — The number of carmakers in the Philippines could more than double under the People's Car Program poised to take effect before the end of the year.

Negotiations are nearing completion among the first four participating manufacturers, and production of cars from semi-knockdown kits could begin within the next two months.

Philippine car sales growing, Page 17

The idea was to create a new brand of locally assembled cars that would cost less than the Toyotas, Nissans and Mitsubishis assembled by the country's three existing makers.

Thirteen companies from around the world wanted to join the scheme. With a great deal of flourish, the government announced it was setting a 175,000 peso ($7,292) retail price limit on the cars to be produced in the program. The limit is about 100,000 pesos ($4,167) cheaper than retail prices of existing models.

But it now looks as though the participants in the program will be lucky to sell even half the number of cars forecast by government planners, and it looks like they will

"We wanted to break the cartel" of three goverment-licensed assembly companies in the Philippines, says Elena Lim, who helped start the People's Car Program.

ORIENT EXPRESS

Healthy car sales, robust predictions whet Toyota, GM appetites for Turkey

By Richard W. Bruner
STAFF CORRESPONDENT

ISTANBUL, Turkey — The new-car market in Turkey is expected to double by the mid-1990s. And a newcomer to the country — Toyota — has plans to capture a fifth of the country's sales.

Production by Fiat and Renault dominates the Turkish automobile market. Renault is expected to increase its presence by building a new plant in Torbali.

General Motors is also building a factory in Torbali. It will assemble 10,000 to 15,000 Vectras a year.

Mehmet Kahya, 39, president, of Toyotasa, the 50-50 joint venture between Toyota and the Turkish company Temsa, said he expects annual demand for new cars to reach 300,000 to 500,000 by 1995. How high it goes will depend on government tax policy. With lower taxes, it could easily reach 500,000, he said. Toyota plans to produce 100,000 of those cars.

Nejat Emirli, general secretary of the Turkish Automobile Manufacturers Association, said 1989 production was 118,314, and strong demand could push that number to 200,000 this year. Virtually all of the output is sold in Turkey and accounts for about 85 percent of the country's car sales.

Emirli

People in Turkey are "widening their eyes," he said. "They want more comfort." Incomes in many sections of Turkey are improving.

Ali Ihsan Ilkbahar, 51, general manager of the Ford operation in Turkey and president of the Turkish Automobile Manufacturers Association, said, "Everyone's projection for the year is an increase of no less than 50 percent for all kinds of vehicles."

Ilkbahar

Car sales are up 54 percent this year. Truck sales have grown 60 percent; minibuses, 30 percent; and farm tractors, 98 percent. Ilkbahar explained that the growth follows a decline in 1989 sales. The country's value-added tax increased from 25 percent in 1988 to 38 percent in 1989.

Taxes have dropped slightly this year, and interest rates and inflation also have declined. Turkey's productivity and exports have improved, putting more money into consumers' pockets.

Ford Motor Co., Fiat S.p.A. and Renault S.A. now make cars in Turkey. Last year's car production totaled 6,140 for Ford, 51,781 for Renault and 60,393 for Fiat.

Toyota is the first Japanese manufacturer to express an interest in Turkey's auto market. The Toyota-Temsa joint venture will build a $250 million assembly plant 93 miles from Istanbul.

Kahya said he expects the first auto to be built in early 1993. Turkish law requires that at least 70 percent of the parts be made in Turkey.

First-year production is scheduled to be about 20,000 cars, most of them Corollas. Within a year, Kahya expects capacity to be 100,000, all for sale in Turkey.

Kahya's current task is to set up a sales system so his company can import Corollas for sale here.

Ilkbahar, general manager of Otosan Otomobil Sanayi A.S., Ford's joint venture in Turkey, said his company focuses its attention on commercial vehicles, including 4,000 20-ton Ford Cargo trucks and 6,000 Ford vans a year.

The company also makes a small pickup truck called Anadol, the first vehicle completely Turkish in design and manufacture. Otosan introduced it in 1966. It had a fiberglass body with a Ford-licensed powertrain. In 1983, Otosan redesigned it as a pickup truck and has been making about 1,500 annually. Next March, Ilkbahar expects his company to begin producing 2,000 Ford Taunus pickups a year.

Otosan also imports and sells Ford Escorts but has no plans to manufacture them. Except for a small number of vans exported to Hungary and Bulgaria, all of Otosan's production is for Turkish sale.

To dedicate a new factory in Torbali, Turkey, to build Opel Vectras, GM Europe Vice President Tom Mason planted a tree.

Ford has long tenure in Turkey

ISTANBUL, Turkey — Ford Motor Co. has a long history in Turkey. Sixty-two years ago, the founder of the Koc Group of companies, Vehbi Koc, added a Ford dealership to his growing list of enterprises.

In 1959, the Koc Group expanded its Ford operation into what was called a "dealer-assembly" operation. Gradually, the company moved into the manufacture of Ford components under Ford license, as well as importing parts for assembly.

The Koc Ford operation now includes an engine and truck assembly factory, in Inonu, plus an automobile assembly plant in Istanbul.

In 1983, the Koc Group sold 30 percent of its share in its Ford manufacturing facilities to Ford Motor Co.

The Koc Group also has the license to produce Fiats. But automobiles are only part of its holdings. Other enterprises include banks, electronics manufacturing, construction, mining and food products.

Joint-venture chief learns in America

Mehmet Kahya, the 39-year-old president of Toyotasa, the joint venture that will build and sell Toyotas in Turkey, is a product of American business education.

Like many members of the Turkish middle class, Kahya learned to speak English as a youngster. He was born in southern Turkey where his father, a farmer and landowner, was determined to see his children get the best possible education.

Kahya

As a boy, Kahya went to American schools. He later attended Robert College (the equivalent of an American high school) in Istanbul. Robert has an excellent reputation among American college educators.

That helped Kahya get a scholarship to Yale, where he majored in economics and chemical engineering. He later earned a master's in finance marketing and quantitative methods from Northwestern University.

Kahya is also president of Temsa, Toyota's partner in the Toyotasa joint venture. The company assembles and distributes such Japanese products as Komatsu forklifts and Mitsubishi buses. Because of the deal with Toyota, Temsa has stopped distributing Mitsubishi cars.

— Richard W. Bruner

RIGHT DRIVE

FROM PAGE 3

facturers has been that either there wasn't enough volume to justify producing a right-hand-drive version of a model or that the snob appeal of left-hand drive was a marketing advantage.

Volume is low for importers. Yanase and Co. imports Volkswagen, the leading import at 48,980 units for the fiscal year ended March 31, 1990. The leading single model this calendar year is VW's Golf, with 13,463 units imported through July. But there is no clear answer to the question of how much volume would justify the tooling to make right-hand-drive versions of cars.

At some point, the government could get involved in the question as a safety issue. Left-hand-drive cars have been permitted on highways, in part because there were so few imports. Also, government policy now encourages imports from the United States to diminish the trade deficit, and a right-hand-drive rule would be perceived as another barrier to the Big 3.

But when Honda began importing Ohio-made cars two years ago, the government reportedly warned the company it would have to switch fairly rapidly to right-hand drive. On April 1, right-hand-drive Accords began arriving.

Here, as in the United States, safety is a large part of Volvo's marketing campaign, and Volvo Japan Co. recommends right-hand drive for safety. The company hopes to sell 11,000 vehicles this year, and 90 percent will be right-hand drive. Still, Volvo finds it necessary to provide left-hand drive for those who demand it.

Status, not safety, is on the minds of most import buyers. But as affluent Japanese consumers become more accustomed to luxury cars, the exotic appeal of left-hand drive is beginning to fade.

When BMW Japan Corp. introduced right-hand-drive vehicles in 1985, its dealers were unhappy, a company spokesman said. They could not imagine selling prestige imports with ordinary right-hand drive.

In the first six months of 1989, when BMW customers could choose a model offered in both left-hand and right-hand drive, 79 percent chose left. In the first half of 1990, that figure dropped to 69 percent.

In the 1950s, Volkswagen first offered right-hand drive in Japan; the percentage of right-hand-drive models has grown steadily to 70 percent of VW sales and 60 percent of Audi sales.

Honda imported its Accord coupe from Ohio with left-hand drive for two years until 10,000 units had reached Japan. Company officials had said they would not introduce right-hand drive until volume was high enough to make it financially feasible.

The company plans to bring in 50,000 Hondas annually by the mid-1990s. The ratio of left- to right-hand drive, says a spokesman for Honda North America Inc., will be largely up to the market.

For now, say Japanese sources, Honda is importing a 50-50 ratio of the new Accord coupe. While Accord cognoscenti know that all coupes are built in Marysville, Ohio, the right-hand-drive versions look as though they could have come off the line at the Sayama plant in Saitama Prefecture.

While Accord cognoscenti know that all coupes are built in Marysville, Ohio, the right-hand-drive versions look as though they could have come off the line at the Sayama plant in Japan.

Mercedes-Benz Japan Co. Ltd., which hopes to sell 40,000 units this year, said 65 percent of its vehicles have left-hand drive. The percentage is decreasing gradually, a spokesman said, because Japanese buyers are starting to distinguish between brands, rather than between imports and domestics. In a few years, the company expects to offer "mainly right-hand drive."

America's Big 3 don't offer right-hand-drive imports from North America.

Jim Steinhagen, director of North American sales for General Motors Overseas Corp., said GM expects to sell 9,000 units in Japan this year. He said he could sell more cars if they had right-hand drive, at least in the lower end of the market, but he would not guess how many more or say what kind of volume it would take to justify tooling costs for right-hand drive versions.

But GM is not totally without right-hand-drive capacity. Sales of Opel models in Japan last year were 2,643, and right-hand drive made up 36 percent.

Ford Motor Co. sells approximately 6,000 imports in Japan annually, all left-hand drive, and 75,000 Mazda-made cars with Ford badges, all right-hand drive.

Ben R. Lever III, president of Ford Motor Co. Japan, said he thinks he could sell "some more" with right-hand drive. He said that at volume of 100,000 units of one model, the demand would be for right-hand drive.

Chrysler sold only 973 cars in Japan in calendar 1989, all left-hand drive. With Honda preparing to distribute Jeeps in Japan, sales are expected to grow by 2,000, all left-hand drive, in the model year that begins Oct. 1.

Tsuneo Iizuka, manager of operations and finance for Northern Pacific Operations for Chrysler Corp., said Chrysler has investigated the potential for right-hand drive world-wide, but hasn't made a decision yet.

Japan's market is demanding. Ken Urushibara, who sold his Chrysler New Yorker, is a simultaneous interpreter and an appreciator of deluxe cars.

Because big cars depreciate quickly, he could go to the used car market and for relatively low prices buy Cadillacs and Imperials: large, well-appointed cars that had been tenderly handled by chauffeurs. Until the late '70s, he said, the American cars he bought were better equipped than the top-line Japanese cars.

Now he owns a Mazda Miata, Nissan Cefiro and Toyota Lexus. They have have everything he wants in a car, including right-hand drive.

Pontiac campaign maps out detour around dullsville

By Raymond Serafin
CRAIN NEWS SERVICE

Pontiac parlayed its emphasis on muscle and handling ability into solid growth during most of the 1980s, but that success led more competitors into its territory.

Pontiac is betting that nesting instincts, cocooning and growing older won't dull baby boomers' enthusiasm for a little zip in their cars.

The division's 1991-model advertising breaks on network television Sept. 24. It offers Pontiac as the antidote to social scientists' predictions that "dullsville is right around the corner," said Noel Nauber, senior vice president and group creative director at Pontiac's advertising agency, D'Arcy Masius Benton & Bowles, of Bloomfield Hills, Mich.

New music also plays a key role in the image-building television campaign, which Pontiac will complement with a print strategy aimed at delivering product information.

Pontiac will put about 25 percent of its 1991-model-year spending in print, compared to about 10 percent in the past several years. Television will get about 70 percent of Pontiac's budget, with the other 5 percent going to radio, direct mail and outdoor.

General Motors hasn't yet determined 1991 ad budgets, set on a calendar-year rather than a model-year basis. Pontiac's ad spending for 1990 is estimated at $130 million.

Pontiac parlayed its emphasis on muscle and handling ability into solid growth during most of the 1980s, but that success led more competitors — such as Dodge, Nissan and Mitsubishi — into its territory. Pontiac's share of the U.S. new-car market slipped from 7.36 percent in 1988 to 6.88 percent in 1989. It was 6.91 percent for the first seven months of 1990.

Four new 30-second spots use the format of alternating statements by smug social critics with shots of individualistic Pontiac drivers breaking out of the predicted conservative mold.

One spot shows a stern-looking pair of white-coated sociologists discussing data that indicates "the baby boomers are slowing down . . . the adventure curve has peaked and is now on the decline." That alternates with shots of a couple driving a Grand Prix STE, with visual subtitles that make product points.

"Face it, the good times are over," says the male sociologist, to which the male driver replies, "Is that a fact?"

New music uses the lyrics, "Don't settle for less than the ride of your life on the Pontiac Express." The division's theme line, "We build excitement," is back for a 10th year, appearing as a visual tag.

The format also could be used if fuel economy becomes a factor in buying decisions as a result of the Persian Gulf crisis, said Dwight Logie, Pontiac assistant general sales and service manager in charge of marketing. Pontiac would rebut the idea that fuel efficiency can't co-exist with fun.

The Leasing Seminar For The Entire Dealership!

Making Leasing Pay Off!

This High Impact Auto Leasing Seminar will Make Your Dealership A Leader In Highly Profitable Leasing! New Income Immediately!

Bob Leidgen

- ☐ Learn how to profit immediately in leasing! Sell every customer!
- ☐ Increase market share without new investment.
- ☐ Train salespeople and managers in profitable leasing.
- ☐ Learn the technical aspects of leasing with detailed 1990 tax information.

Jay Leidgen

GUARANTEED RESULTS!

"This seminar emphasizes the tax advantages of leasing, providing a significant alternative in financing."

Auto trade deficit edges lower

Trade analysts have said the sluggish U.S. new-car market, which has hurt sales of both imported and domestic vehicles, is the chief reason for positive trade news.

WASHINGTON — Increased exports by U.S. automakers helped reduce the U.S. trade deficit in automobiles and light trucks by 1.4 percent in May.

U.S. exports were valued at $1.18 billion, up 22.9 percent for the month, according to the latest statistics from the U.S. Commerce Department. Imports to the United States registered a modest 1.9 percent gain over the same period, with shipments valued at $4.78 billion.

The automotive trade deficit for the month declined $50 million compared with May 1989, to $3.60 billion, an improvement of 1.4 percent.

Trade analysts have said the sluggish U.S. new-car market, which has hurt sales of both imported and domestically produced vehicles, is the chief reason for positive trade news in early 1990. In addition, Japanese automakers are offsetting imports from their home country by building more cars in the United States.

On an annualized basis, the automotive trade deficit improved 7.3 percent from last year. The deficit in the June 1989 through May 1990 period stands at $40.46 billion, compared with $43.64 billion in the year-ago period.

Japanese imports were down 12.7 percent for the month, while South Korean shipments were off 8.9 percent. Other countries registering a decrease in imports were: United Kingdom, 1.5 percent; France, 99.9 percent; and nations classed as "others," 2.5 percent. Brazil shipped no vehicles to the United States during the month after sending more than 18,000 in May 1989.

Canada increased its shipments by 18.5 percent. Other increases came from West Germany, 19.8 percent; Sweden, 11.6 percent; Mexico, 0.6 percent; and Italy, 8.0 percent. Yugoslavia shipped 20 vehicles to the United States in May 1990, compared with three in May 1989.

Exports of U.S.-built vehicles to Japan increased 26.5 percent. Shipments to Canada rose 23.2 percent and those to countries classified as "others" were up 23.0 percent.

GM CARS

FROM PAGE 2

goal for the 1991 model year is to raise those shares to 6.0 percent and 1.0 percent, respectively.

For the third year in a row, Oldsmobile will market its products under the "New Generation of Olds" banner.

CADILLAC: General Manager John Grettenberger said Cadillac aims to sell 258,000 1991 cars, earning a 2.8 percent market share. The division has sold 225,000 1990 cars through August and has a 2.8 percent share.

The 1991 targets are to maintain an upward sales momentum while maintaining market share and retaining its No. 1 luxury nameplate status, Grettenberger said, despite a down market and increased competition for the luxury buyer.

In its 1991 ads, Cadillac will focus on specific benefits from the more powerful 4.9-liter engine and new electronic transmissions available on most models. The Brougham also gets more efficient with a 5.0-liter electronic throttle-body fuel injected powerplant.

PONTIAC: Pontiac expects sales and market share advances in the 1991 model year that will foreshadow even greater potential in 1992, when the Grand Am and Bonneville get new designs.

Model year sales of 800,000 units and an 8 percent share of the passenger-car market in 1992 are "very attainable," Pontiac General Manager John Middlebrook said at a preview of 1991 models.

The division expects to close the 1990 model year with sales of about 670,000 units, down about 30,000 from predictions at this time last year, Middlebrook said.

"Positive momentum has swung back our way," he said. "While our model year share is at 6.8 percent of the passenger-car market, our calendar year share through Aug. 20 is up to 6.9 percent, which is the same level we finished the '89 calendar year at."

Pontiac still hopes to reach the 700,000 unit sales mark and 7 percent share in 1990, although in the calendar year rather than the model year, Middlebrook said. The calendar year performance would be up from 678,968 units and a 6.9 percent share in 1989.

Another incremental increase is in the forecast for the 1991 model year, when Pontiac's goal is to sell 710,000 units, he said. The assumptions are based on expectations of domestic sales of 14.5 million 1991-model cars and light trucks.

Also disclosed at the preview:

- Pontiac is not considering all-wheel drive or four-wheel drive for any of its models because the off-road image such outfitting evokes is not consistent with the division's high-performance theme, an engineer said.

Pontiac is turning instead to traction control which will be on the Bonneville in 1992 and Firebird, Grand Prix and Trans Sport in 1993.

- Pontiac over the next three years plans to eliminate the "LE" designation from its entry-level products because it also doesn't fit a sporty image.

SALES

AUGUST

FROM PAGE 2

Transplant automaker Nissan suffered the biggest overall sales drop in the final period of August, its deliveries slumping 34.38 percent.

This year's output of Nissan' best-selling Sentra model at the Smyrna, Tenn., plant was down 24,695 units through Sept. 1 as the company prepared for the introduction of the new 1991 Sentra, which will debut this week.

Chrysler's vehicle sales were down 31.03 percent; Ford's tumbled 28.87 percent; and GM's sales fell 22.58 percent.

In an eight-month comparison, 1990 had one more selling day, 206 vs. 205, but domestic and import vehicle sales still slid 5.18 percent.

Analyst Webb said it's not all bad. "Fortunately, dealership profits are not as dependent on new-unit sales as they have been in the past," he said.

Among the North American makers for the eight-month period, only Honda, Mazda, Mitsubishi and Toyota were ahead of last year in total vehicle sales. Among the Big 3, Lincoln was the only make to show an increase in sales of North American-built cars.

Only six imported makes were up for the year: Alfa Romeo, Audi, Chevrolet Geo, Mitsubishi, Suzuki and Volkswagen. The Geo increase lifted Chevrolet above its overall 1989 car-sales total.

Chevrolet's 0.78 percentage point gain in combined car and truck market share for the year almost matched Ford Division's combined loss of 0.68 of a percentage point. Chevrolet is within 0.33 of a percentage point of overtaking Ford as the market-share leader in U.S. vehicle sales. Last year, Ford had a lead of 1.80 percentage points at the end of August.

Robert Rewey, vice president of sales operations for Ford, attributes some of Ford's market share decline to an earlier temporary shutdown of the company's Wayne, Mich., plant, which produces the Escort. Escort sales are down 21.76 percent for the year.

*Incentive financing of zero percent for 24 months, 4.9 percent for 48 months and 7.9 percent for 60 months applies to Chrysler LeBaron coupe, Imperial, New Yorker, New Yorker Salon, New Yorker Landau and New Yorker Fifth Avenue; Dodge Daytona and Dynasty, and Jeep Cherokee and Wagoneer Ltd. Rates of zero or 2.9 percent for 24 months (depending on model), 7.9 percent for 48 months and 10.9 percent for 60 months are available on all other models.

*Finance rate is 4.9 percent for 48 months on Escort and Tracer.

*Buick rebates based on option package selected. Finance rates on Regal sedan are 4.9/4.9/4.9/10.9. No rebates or special financing on Reatta and Park Avenue.

*Rebates on 1989 Oldsmobiles are $500 more than on 1990 models. Finance rate is 4.9 percent for 48 months on 1989-90 Cutlass Supreme and Cutlass Ciera and 1990 Buick Century and Regal.

**Dealers contribute $1,000 on Grand Prix, $500 on Trans Sport.

*Customer rebate or dealer rebate; dealer's choice

**$3,000 in California

Note: Some makers offer rebates to buyers of 1990 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

Ford, Chrysler pay rebates on '91s

Import programs include cash for dealers on 1991 Toyotas

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Matching General Motors' move, Ford Motor Co. and Chrysler Corp. are paying rebates to buyers of most of their 1991 vehicles even before their official introduction.

Several import lines extended or introduced new consumer and dealer rebates last week. Toyota Motor Sales in U.S.A. Inc. is offering dealer rebates on 1991 models.

Ford is offering rebates of $500 to $1,000 on 1991 models. Cut-rate financing starts at 4.8 percent on the Ford Escort and Mercury Tracer and 7.9 on others.

Not included in the new program are the 1991 Mercury Capri, the 1991 Ford Explorer and 1991 Lincolns. Buyer incentives on 1989-90 cars and trucks, which range from $600 to $2,000, are unchanged.

Cash rebates on 1991 cars are $500 on Mustang, Probe, Escort, Tracer and Festiva; $750 on Crown Victoria, Thunderbird, Cougar, Tempo, Topaz, Taurus and Sable; and $1,000 on Grand Marquis.

Ford's 1991 rebates end Sept. 26, the day before the official introduction date of most 1991 models, but dealers already have begun selling most 1991s.

Rebates on 1991 trucks are $500 on the Aerostar, Econoline, Club Wagon, Bronco and F series with automatic transmission; and $1,000 on the Ranger.

Chrysler said it will offer $500 on most 1991 models and $1,000 on the Dodge Ramcharger and Jeep Grand Wagoneer.

The $500 rebates cover: Chrysler Imperial, New Yorker Fifth Avenue and Salon and LeBaron coupe and sedan; Plymouth Acclaim, Sundance (except America models), Laser and Colt (except Vista); Dodge Daytona, Dynasty, Monaco, Spirit, Shadow (except America models), Colt (except Vista), standard-sized pickup and Dakota pickup; Eagle Premier and Talon; and Jeep Comanche, Cherokee and Wrangler.

Mazda Motors of America Inc. announced consumer rebates of $750 to $1,500 on 1990 models.

A program ending Nov. 2 offers discounts of $500 to $750 on option packages on the MPV and cash paybacks of $1,000 on the MX-6 and $1,500 on the 626.

A second Mazda program that expires Oct. 2 offers $750 cash on the 323-SE and no charge for the SE-5 and LE-5 packages on trucks plus $750 on the two-wheel-drive and 4wd trucks.

Hyundai Motor America extended until Oct. 2 its rebates to buyers and dealers on 1990 Excel and Sonata models. They were scheduled to expire Sept. 4.

The Excel has consumer rebates of $500 on the three-door L and GS, $750 on four-door L, $1,000 on the GL automatic; and $1,250 on the GL manual and GLS.

Dealer rebates are $200 per unit for one through 10 sold, effective with the 10th sale; $300 through the 20th sale; $400 through the 30th; and $500 above 31.

Sonata has consumer cash rebates of $750 and dealer cash rebates of $350 per unit sold.

Toyota announced a new dealer cash rebate program through Nov. 2 on 1989, 1990 and 1991 models.

The payments range from $200 to $800 on 1991 Corollas, $200 to $1,000 on 1991 Camrys, $200 to $1,000 on 1989-90 Tercels and Corollas and $400 to $1,200 on 1989-90 Camrys.

Volkswagen United States Inc. is offering dealers $500 rebates on the Fox through Sept. 30 and $1,500 on the Corrado indefinitely.

**$3,000 in California

Note: Some makers offer rebates to dealers on sales of 1990 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

UAW optimistic: GM talks ahead of schedule

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Contract talks between General Motors and the UAW are down to the wire, and the UAW's chief bargainer is optimistic an agreement can be reached before the Sept. 14 deadline.

"We're way ahead of schedule at this point, but that does not say we're going to settle or not settle," said Steve Yokich, UAW vice president and head of the union's GM department.

Yokich said that "people programs," which include health and safety issues and educational programs, are pretty much settled, but there is still a lot of work to be done on the "hard stuff" such as job and income security, health care and outsourcing.

UAW sources say the union hopes to accomplish job security by limiting the number of weeks employees can be laid off and by bolstering the Supplemental Unemployment Benefits and Guaranteed Income Stream programs.

The first program currently guarantees workers up to 95 percent of their pay for two years. Then the Guaranteed Income Stream kicks in for workers with 15 years seniority (or 10 years if the plant closes). This program provides 50 to 75 percent of a worker's pay, based on seniority.

Yokich would not say if the contract would be extended if an agreement for GM's 30,000 hourly workers is not reached by the deadline. After the GM contract is settled, the union will move on to Ford Motor Co. and Chrysler Corp. to try to secure similar agreements.

Meanwhile, skilled trades workers at a GM components plant in Flint, Mich., narrowly approved a local three-year agreement last Thursday after voting it down the first time. The pact guarantees no layoffs over the life of the agreement unless the plant closes.

PRODUCTION

Car output slips 2.6% in August

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Production began at Saturn Corp. in Spring Hill, Tenn., last month. The plant produced approximately 500 units in its first month and is expected to assemble 30 units per day throughout September.

U.S. auto production in August was 523,576 units, 2.56 percent below the August 1989 build of 537,308. Last month's total was 42.40 percent above July's 367,678 (a model changeover month).

U.S. automakers assembled 111,737 units last week, 10.51 percent below the previous week and 3.29 percent above the year-ago week.

Truckmakers produced 320,354 units last month, 22.18 percent above July's production of 262,198 but 9.25 percent below the year-ago month's 353,000

Truck production last week was estimated at 68,844 units, 9.17 percent behind the prior week and 1.44 percent ahead of the year-ago week.

Estimated auto production last week was split as follows: General Motors, 46.42 percent; Ford Motor Co., 23.25 percent; Chrysler Corp., 11.23 percent; Honda of America Manufacturing Inc., 6.36 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.07 percent; Diamond-Star Motors Corp., 3.07 percent; Mazda Motor Manufacturing (USA) Corp., 2.93 percent; New United Motor Manufacturing Inc., 1.79 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.21 percent; Subaru-Isuzu Automotive Inc., 0.56 percent; and Saturn, 0.11 percent.

Ford plans to idle the Kansas City, Mo., car assembly plant and the Louisville, Ky., truck plant this week due to a shortage of dealer orders.

GM has extended the downtime at the Reatta Craft Centre in Lansing, Mich., due to high inventory levels. The plant has been down for model changeover since July 23. It is now scheduled to resume production Oct. 1.

The company also scheduled Saturday overtime last week at the Moraine, Ohio, truck plant. The postal vehicle chassis line was the only line affected.

Chrysler scheduled two overtime shifts last Saturday at the Newark, Del., car facility and the Warren, Mich., truck plant.

Canada car pace hits 5-year high

Canadian car production for August was 77,839, the highest August build since the 89,702 assembled in 1985. The August total was 5.89 percent above July's 73,512 and 51.71 percent above the year-ago month's 51,309.

Truckmakers assembled 53,905 units last month, the highest August build since 1984 when 65,386 units were produced.

The August total is 42.74 percent above the 37,764 assembled in July and 41.16 percent above the 38,187 produced in August 1989.

STRIKE IN CANADA

The Canadian Auto Workers called a national strike against Ford Motor Co. late Friday when negotiators failed to come up with a contract to replace one that expired at midnight Friday. In Detroit, the UAW was talking with General Motors. In both cases, the union expects any new contract to be the pattern for other automakers. Reporters had kept up a vigil in Detroit, above, since Aug. 28.

Chevrolet offers rent-a-car program for U.S. dealers

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Next month Chevrolet will begin a program that offers its 4,700 dealers the chance to get into the daily rental car business.

The program is called the Chevrolet Geo Dealer Rent A Car System. It was tested this summer in Kansas City, Kan., and Kansas City, Mo., and was so well received that Chevrolet decided to offer the program nationally, sources said.

The intent of the program is to offer Chevrolet dealers the same price benefits given to daily rental companies, while providing extra incentives to help dealers enhance their used-car operations when the vehicles are taken out of the rental car fleet.

In a complicated set of transactions, participating dealers will order nearly any vehicle with equipment of their choosing, use them for daily rentals for four to 15 months, and then keep them for sale in their used-car departments.

Conversion vans and Corvettes cannot be ordered under the program, but apparently anything else is fair game. Certain option packages and models will carry incentives, but dealers are free to order what they want.

Chevrolet did not respond to *Automotive News* requests for an interview about the program.

Here's how the program works:

- Dealers first will buy the vehicles from General Motors, reaping the same fleet discounts offered to rental car companies.
- Then the vehicles are sold to General Motors Acceptance Corp. at invoice cost less dealer incentives.
- GMAC leases the vehicles back to the dealer for a monthly payment that includes a pre-set depreciation rate based on the model, interest that is less than one percentage point higher than the prime rate, and insurance based on the model and geographic area.
- Dealers keep vehicles in their rental fleets no less than 120 days and no more than 15 months.

Because dealers technically don't own the cars, only the amount of the lease payments are charged against their line of credit with GMAC. If dealers owned the vehicles, the full value would be charged against their credit line.

- When a dealer removes a vehicle from the rental fleet, he must buy it back from GMAC, but at a price that Chevrolet guarantees will be no more than the car's auction value. If the auction value of the vehicle is less than what is owed by GMAC to GM, Chevrolet will pay the difference.

GMAC benefits from the complicated structure because its leasing business increases.

Dealers benefit because they have a new profit center plus cars that can be used to improve customer satisfaction in the service department — rental cars that neither the dealer nor customer may have to pay for directly.

Ford considers '93 Suburban fighter

Based on F-series, 40,000 to be built

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division plans to introduce a Chevrolet/GMC Suburban-fighter in the 1993 model year that will be based on the popular F-series truck.

Engineering and other company sources say the program has not been approved by the corporation, though preliminary plans are in the works.

During the past years, two truck converters, Magnum Motor Coach of Sturgis, Mich., and Centurion Vehicles of White Pigeon, Mich., have been making a Suburban-type vehicle that is based on F-series and Bronco chassis and parts.

Magnum has been marketing a Suburban look-alike called the Metropolitan since 1987. The Metropolitan comes in half-ton, three-quarter-ton and one-ton configurations on Ford F-150, F-250 and F-350 chassis. The vehicle is assembled from Ford parts.

Magnum President Ed Dinsmore

EUROPE'S 1990s: *Tailgated by Japanese upstarts, Europe's makers race to exploit strengths, tap new segments in record time*

European automakers are the focus of this second leg in a series on product plans for the 1990s.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FUTURE PRODUCTS

FRANKFURT, West Germany — Europe's car industry has found a new reason to fear the Japanese. Makers are concerned about the threat high-liners like Toyota's Lexus and Honda's NSX pose to the dominance of top European brands.

Increasingly, the line in auto industry circles is that the new Japanese cars are so good that the European luxury-class and performance-car specialists could be undercut. The worries are not for this year or next, but later in the decade — the period on which product planners are now focusing.

Europe is still concentrating on its traditional strength — ultra-smooth sedans that range upward to next year's breathlessly awaited Mercedes-Benz S class. Europe also is developing into a supercar haven — there are projects in Italy, Germany and England inspired by Porsche's 959 and Ferrari's F40. It will be shocking if the S class is not a terrific specimen and does not wrest the unofficial

New Chrysler dealer rebates have flavor of old push-pull

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. has adopted a modified push-pull type incentive program for dealers, featuring factory set purchase and sales quotas based on the dealership's size, stock and sales record.

The program is more like a nudge-pull than a traditional push-pull program, which many manufacturers — including Chrysler — foreswore a decade ago in favor of retail incentives and other less-drastic wholesale incentive spiffs.

In a traditional push-pull program, dealers must purchase a given number of cars "pushed" by the factory in order to participate in programs in which they earn cash for meeting retail sales quotas, which "pull" the cars out of the dealership.

Chrysler's current program, which runs from September through Dec. 31 and covers all 1989, 1990 and 1991 vehicles, pays dealers cash rebates of $250 per unit sold between 50.1 percent and 75 percent of their sales quota, $750 per unit between 75.1 percent 99.9 percent and $1,000 for each unit over 100 percent of quota.

For example, if a dealer who has a sales objective of 50 cars

High hopes
Infiniti General Manager William Bruce, shown flanked by G20 sedans, predicted sales of 40,000 cars in 1991 — more than twice this year's expected total — at a media preview of the 1991 line. See Page 6 for details on Infiniti, Mazda, Nissan and Mercedes-Benz. previews.

AUTOMOTIVE NEWS/JOE WILSSENS

Sept. 1-10 sales climb 2%

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Buoyed by strong sales of transplant-built cars, early September U.S. car and truck sales rose 2.41 percent over the Sept. 1-10 period last year.

A total of 216,374 cars and trucks were sold in the period, an increase of 5,098 units.

Car sales were up 6.70 percent to 139,717 units; truck sales declined 4.57 percent to 76,657. Each period had seven selling days.

Ford Motor Co. was the only Big 3 maker to report increased overall sales. Car sales were off 0.69 percent, but truck sales rose 9.24 percent to give Ford a 3.77 percent increase over 1989 early-September sales.

In car sales, Ford's biggest support continues to come from its Lincoln brand. Sales were up for all three models, hiking Lincoln sales 33.96 percent over the first 10 days of September last year.

Escort sales, which have been weak most of the year, increased 13.88 percent or 876 units.

Sales of the Thunderbird, Cougar and Probe continued to falter: Cougar sales were off 50.47 percent, Probe's plunged 48.45 percent, and Thunderbird's dropped 38.32 percent.

General Motors' car sales rose 6.40 percent, but truck sales tumbled 13.82 percent, pulling GM's overall sales down 1.09 percent.

GM received positive results

No plant before its time

Toyota sits on decision to add assembly site

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Co. is inching closer to building a new North American assembly plant, but the automaker says the final decision won't come until at least next year.

Toshiaki Taguchi, general manager of the company's North America Division in Tokyo, said the company will likely announce its decision in 1991 or 1992.

The Wall Street Journal reported last week that a decision on the new plant was expected within 30 to 60 days. But Yoshiharu Tateishi, manager of Toyota's International Public Affairs Division, said there was a misunderstanding between the paper and a U.S. Toyota spokesman. The spokesman, according to Tateishi, had only said he hoped there would be a decision within two months.

U.S. Toyota officials have said that another American manufacturing plant is necessary to satisfy its growing market, and they have been anticipating an announcement from Tokyo. But no decision has been reached on the plant's site, its scale or its product, officials said.

Meanwhile, Toyota announced plans to build a new $50 million aluminum casting plant in Troy, Mo., to supply cylinder heads and intake manifolds to its Georgetown, Ky., powertrain plant.

The new Troy plant will operate under the name Bodine Aluminum Inc., an 80-year-old St. Louis company that Toyota Motor Corporate Services of North America Inc. in New York acquired late last year. It will begin supplying parts in January 1993.

The new foundry will use low-pressure casting methods in producing cylinder heads, a technology that is common in Japan but still rare among American foundries. Additional products eventually may be added for the 100-employee foundry, including products for other automakers.

Growing ties to the Georgetown operation have led some industry observers to assume that Toyota's next assembly plant will be built there. The two-year-old, $1.3 billion Camry and powertrain complex sits on a 1,300-acre tract that remains nearly two-thirds vacant.

In addition to building the Camry in Kentucky, Toyota produces the Corolla in Cambridge, Ontario, and at New United Motors Manufacturing Inc., a 50-50 joint venture with General Motors in Fremont, Calif. Toyota plans to build small pickups at NUMMI next year.

New Ford prices show 1.9% rise, down from 3.2%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. took a closer look at its pre-introductory 1991 car prices and decided they were not one of the company's better ideas.

Ford announced firm prices for its fall-launch 1991 cars last week and said they are up an average of 1.9 percent over final 1990 model-year prices. *Automotive News* estimates the increase at $312. The increase is sales weighted and is based on comparably equipped models.

The firm 1991 prices were chopped significantly from the pre-introduction stickers announced in July. At that time, Ford said its car boost averaged 3.2 percent or $528.

Ford spokesman David Krupp said the changes reflect the current sales environment and competitive actions. He declined to comment on whether specific changes were made to be more competitive with General Motors and Chrysler Corp., which have announced hikes of 2.3 percent and 0.9 percent on 1991 cars.

At a news conference last week, Ford Chairman Harold Poling said the company thought its major competitors (read GM) would not be as active in offering discounts on option packages as they have been in the past. Ford was wrong, thus the new pricing.

Volkswagen	481
Total	**82,257**

Porsche plans sedan; 1 car line to be axed

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

ZUFFENHAUSEN, West Germany — After years of deliberation, Porsche AG has charted a product development course for the 1990s that includes two instead of three product lines and development of a full four-seat and possibly four-door "sports car" to replace the 928.

Porsche's supervisory board met here last week to approve the strategic plans. But a company insider said the key decisions had already been made at the senior management level.

The new, premium-priced four-seater is not destined to arrive before about 1995. That means a full 18 years will have elapsed since introduction of the last all-new Porsche model — the 928 in 1977.

The 27-year-old 911 model will stay in production until at least the year 2000. The V-8-powered 928 and 4-cylinder 944 models will tumble out of the lineup, but not for at least five years and not before getting improvements, such as a deep facelift for the 944 in a year.

Porsche officials won't comment officially on future product plans, but insiders say the company has determined that it must no longer offer a range of models that are so closely aligned — in effect three 2+2s with only token rear seats. The 928 was originally intended to replace the 911 but it never achieved a broad sales base. And the 911, instead of being pensioned off, continued to evolve as an evergreen model.

Two years ago, Porsche introduced a new 911 that is known internally as the 964. The new car was substantially changed, incorporating technologies from the 959 supercar/rolling testbed that appeared in 1987. Production of 911 models totaled 18,756

Citroen faces 3 obstacles in return to U.S. market

By Jim Crate
INTERNATIONAL EDITOR

PARIS — The chief executive of Automobiles Citroen says his company's re-entry into the U.S. market with the upscale XM sedan has been delayed because of currency exchange rates, Japanese competition and the need to prepare a second model for U.S. sale.

Separately, a spokesman for Peugeot S.A., Citroen's parent, said Peugeot will begin shipping its 605 luxury sedan to the United States by the final quarter of 1991.

The Citroen XM and the 605 share a common platform, although the cars differ markedly in technology and styling. Sales of each this year are expected to be about 100,000 units in Europe.

Citroen said in April that it planned to return to the U.S. market, but not before 1992. In an interview here last week, however, Citroen chief Xavier Karcher firmly linked a U.S. launch of the car to the development of an unspecified second model for the U.S. lineup, which would be required to create a quality dealer network. The best candidate for the XM's stable mate won't be ready for the home market until at least 1992.

"We are working very hard on adapting the XM for the United States, but we have two very serious concerns," said Karcher.

One major fear, he said, is Japanese competition. Japanese carmakers captured 30 percent of the U.S. market last month, while such European lines as Volvo, Mercedes-Benz and BMW declined.

A second concern, Karcher said, is how to set up an American dealer network independent of Peugeot. Citroen's studies have shown that dealers must have more than one product, he said.

Karcher said the new small car being prepared for introduction at the Geneva auto show next spring will definitely not accompany the XM to the United States. That would leave Citroen's as-yet unnamed replacement for the BX, its entry in the mid-range segment, as the most likely choice, but that car is not expected before 1992.

Currency exchange rates also are working against U.S. exports.

The current rate of about 5.30 francs to the dollar would make the U.S. price of the XM about $40,000, he said, positioning it with or slightly above the Lexus LS400, Infiniti Q45 and new Acura.

"This is a very high price for the U.S. market, especially in view of the first concern I mentioned — the growing penetration of Japanese producers," Karcher said.

At 6.5 francs to the dollar, the XM would sell at about $33,000, he said. "This would position us better; that is where we would want to be," he said.

Meanwhile, a Peugeot spokesman said, "We have already accounted for the development costs (of the 605) on the U.S. market and are ready to go."

GM upshifting to electronics

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors is pushing ahead with its plans to add electronic shift controls to all of its automatic transmissions by the mid-1990s despite uncertainties posed by the Persian Gulf crisis, increased competition in a down market and proposed clean air and fuel economy standards.

Each new transmission project costs $400 million to $500 million, according to sources at GM's Hydra-matic Division. In a down market, such outlays might seem prime for cut backs, but sources said GM knows it can't afford to lose more ground to competitors.

Competition is dictating that automatic transmissions have electronics and no fewer than four forward gears. Electronics offer smoother, more consistent shifts from car to car, and provide more flexibility to change transmission dynamics by rewriting software — which is easier and less costly than changing hardware and tooling.

A fourth gear improves vehicle performance and economy — key factors driven by the marketplace and government regulators.

This month the division introduced its newest transmission, the 4L80-E for rear-wheel-drive light-to medium-duty trucks, its fourth with electronic controls.

The four-speed 4L80-E will get 20 percent better fuel economy than the model it will ultimately replace — the three-speed 3L80, which was introduced in 1962.

Precise control of shifting pattern and feel, available only from an electronic transmission that can react to changes in altitude, temperature and engine performance, makes transmission efficiency and reliability advancements possible, said Alexander Rasegan, Hydra-matic's general director of product and process engineering.

Once electronics are added to a transmission, an automaker gains the ability to reprogram controls to achieve different goals. Instead of taking all of the fuel economy savings achieved with an electronic transmission, a company could add a larger, more powerful engine with no loss in economy.

Conversion to electronic transmissions seems tailor-made for GM because its six car and truck divisions have diverse audiences.

GM's next automatic transmission will be the 4T80-E, due in 1993 in conjunction with the new Northstar V-8 engines.

The 4T80-E will replace the last of the non-electronic 4T60 transmissions, in production since 1984, and spells the end of the F7, an electronic 4T60 version that has been available only on the Allante.

Following shortly will be the 4L60-E, a four-speed gearbox due in 1993 for rwd big cars, performance cars and light trucks. The 4L60-E is designed to replace the 4L60, which debuted in 1983.

The last transmission to switch to electronics will be the 11-year-old, three-speed 3T40, Hydra-matic's highest-volume model.

Hydra-matic and GM have been mulling over the 3T40's replacement for more than a year, and there still is no approved program. In fact, four development programs were put in place as possible successors: X1F, X2F, X3F and X4F.

The X1F was to be a four-speed version intended only for the North American market. It would have been brought out with the X2F, a five-speed version for Europe.

Those two programs were combined to form the X3F, which was intended to be a four-speed for use in both markets. At that point, the market seemed headed toward five-speed automatic transmissions, and neither GM nor Hydra-matic wanted to be without a five-speed option, sources said.

A decision was made in late 1989 to focus on the X4F, a four-speed that would have the flexibility of allowing an extra forward gear to be added, if necessary. The earliest the X4F could see production is 1995, sources said.

GM ELECTRONIC TRANSMISSION PLAN

Electronic transmission	Intro (model year)	Vehicles	Replaced transmission
4L30-E	1988	Opel Omega, Senator; Isuzu Trooper	3L30[1]
4T60-E	1991	Buick Century, Park Avenue, Ultra, Riviera, Regal, Reatta; Cadillac DeVille, Fleetwood; Chevrolet Celebrity, Lumina cars; Oldsmobile Cutlass Ciera, 98, Toronado, 88, Cutlass Supreme; Pontiac 6000, Bonneville, Grand Prix	4T60[2]
4L80-E	1991	Heavier rwd light trucks; armored limosines; school buses; recreational vehicles	3L80[1]
4L60-E	1993	Buick Roadmaster, Roadmaster Estate wagon; Cadillac Brougham; Chevrolet Caprice, Caprice wagon, Corvette, Camaro; Pontiac Firebird; rwd pickups and vans	4L60
4T80-E	1993	Cadillac Allante, Eldorado, Seville	F7[3]
X4F[4] (4T40-E)	1995	Buick Century, Skylark; Chevrolet Celebrity, Corsica, Beretta, Lumina cars & APV; Oldsmobile Cutlass Ciera, Calais, Silhouette; Pontiac 6000, Sunbird, Grand Am, Trans Sport	3T40

1 Will remain in limited production indefinitely for specialty vehicles.
2 Will remain in production indefinitely. 4T60 also used on Cadillac Eldorado and Seville, which get 4T80-E in 1993.
3 F7 is a four-speed electronic transmission used only on the Cadillac Allante.
4 Project not approved. 4T40-E model number is assumed.

SHOW TIME: *First out of the gate, Britain strives to gain prestige with more debuts*

By Daniel Ward
STAFF CORRESPONDENT

LONDON — The British International Motor Show has for years played the poor relation to the Paris auto show because it was held a month later. But for 1990, the event has jumped ahead of Paris in an effort to gain prestige and debut more new models.

The ploy appears to have worked. There will be no major launches at Paris in October, but Birmingham (Sept. 22-30) will have a good showing of new models, headed by the premier of the new European Ford Escort, which will be displayed on a show stand half the size of a soccer field.

A five-door Land Rover Discovery, above, will debut at Birmingham, England, Sept. 22, as will the United Kingdom-built Nissan Primera, left.

Escort is a very important car for Ford of Europe, which expects to sell 650,000 annually. But early press reports in the United Kingdom have been particularly unfavorable, criticizing dull styling, spartan interiors and dated four-cylinder powertrains.

In Britain, Ford has lost two percentage points of market share so far this year in a weak market. As discounting by manufacturers and dealers is stepped up, Ford has come under pricing pressure from an aggressive Vauxhall Motors, a General Motors subsidiary.

Vauxhall will unveil a facelifted Nova with a smoother nose in the GM Europe style and a much-needed new interior. The Vauxhall Carlton/Opel Omega is beginning to show its age and lose sales, so its exterior has been smartened up. And a revised 2.6-liter six-cylinder engine from the Senator has been added to the range.

U.S., Japan makers push new oil grading system

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Carmakers will soon have more to say about the quality of oil available to auto buyers.

New oil specifications were published in May by the International Lubricant Standardization and Approval Committee. The committee was formed by the Motor Vehicle Manufacturers Association and the Japan Automobile Manufacturers Association.

The associations solicited comments from interested parties in North America and Japan. The two trade groups will review comments and the committee will issue final specifications in the fall which will probably take effect for the 1992 model year.

"So far, comments on the specifications themselves have been generally favorable," said James Steiger, director of fuels, lubricants and special projects for MVMA.

"Our members' principle product is cars, not oil," he said. "The oil standardization and approval system will simply help car buyers get everything out of their cars that the manufacturers design into them."

The joint initiative by the manufacturers, according to Steiger, should ensure that the quality of oil available to new-car buyers keeps pace with rapidly advancing oil and engine technology and with automaker requirements.

According to MVMA, the international committee's specifications — precise technical requirements for the physical and chemical properties of engine oils — are the cornerstone of an international engine oil standardization and approval system being developed by the two auto trade associations, whose members produce nearly 94 percent of all cars sold in North America.

The new international committee specs, MVMA said, are distinct from the current oil classification overseen by a tripartite panel representing the American Petroleum Institute, the American Society for Testing and Materials, and the SAE.

Although the new specs will use many of the same technical testing procedures as the tripartite system, they will impose higher standards for such parameters that impact engine and emissions equipment longevity.

The tripartite system takes too long to respond to engine improvement by manufacturers, Steiger said, noting that grades SF and SG, the two latest oil classifications, took eight and seven years, respectively, to come to market.

"We had cars on the road in the early 1980s that required the SG grade," Steiger said. "But because of delays and inflexibility of some of the procedures within the tripartite system, oil of that classification wasn't widely available until the 1989 model year."

Citing an SAE survey, Steiger said 9 to 17 percent of engine oil on the retail market since 1987 has been mislabled.

Oil meeting the international committee's specifications will be readily identifiable to consumers by a distinctive symbol on the product labels of oil marketers who voluntarily agree to meet the new standards, Steiger said.

"The American Petroleum Institute would probably prefer that we stick with the old system," said Michael L. McMillan, chairman of the lubricants standard committee for MVMA, "but it is a cumbersome, confusing and time-consuming system.

"The six- to eight-year timeframe from when a type of oil is needed and when it is widely available is just too long," he said. "Also, a number of studies have shown that some of the oils on shelves do not conform to their American Petroleum Institute labels."

McMillan said the international committee hopes to do a series of dynamometer tests in an independent laboratory as part of its policing program.

"Today, oil samples are collected and only chemical physical properties of the samples can be checked," he said.

McMillan said the petroleum institute's "labeling is confusing to consumers. It's an alphabet-soup of a system."

Asked why MVMA didn't petition the institute to change its methods of evaluating and labeling oil, McMillan said, "We did. This initiative has been going on for about three years. I think they finally see the need for change. But you may have to ask them what their opinion is."

Don Johnson, vice president of product engineering for Pennzoil Product Co. in Houston and chairman of the institute's lubricant subcommittee, said the institute spent "a lot of money on market research and was on the verge of coming out with a new oil program in October 1988 when MVMA said it wanted new certification system."

"Our point is that in the last two years the institute has improved the entire certification system tremendously in both the area of speed of introduction of new categories of oils and higher quality products, as well as the enforcement of the institute's symbol licensing program," Johnson said. "We believe the present system is dynamic and effective."

Johnson said the Institute is working to identify a higher performance category for oils within the system. He also noted the institute's SG symbol, the highest category for performance oil, was introduced two years ago and that a new one will be announced next year.

Automotive News Staff Reporter Jack Keebler contributed to this report.

Service business posts increase

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships in July rebounded from June's decline to register a healthy increase over the year-earlier volume.

In July, according to the Automotive News Service Index, shop volume rose 9.3 percent over the volume recorded in the same month in 1989. June's volume dipped to 99.3 percent of the total reported by dealers in the year-earlier month.

Service and parts business for January 1990 to July 1990 was 7.3 percent above the 1989 period.

July was the first month since April that all five indicators used in the Service Index showed gains. Some dealers attributed the good showing to increased vehicle sales and warranty work, while others said aggressive service selling and promotions were responsible for the rise.

The No. 1 indicator in July was total labor sales (customer-paid and warranty), which posted an increase of 12.0 percent over the year-earlier volume. Shop parts sales, those used on both customer-paid and warranty repairs, were up 9.3 percent.

Gross profit on all labor, parts and accessory sales — the most important indicator from the dealers' viewpoint — was up 8.5 percent for the month, and sales of all parts and accessories recorded a gain of 6.9 percent. Repair orders written were up 3.5 percent, the biggest advance since April.

Dealers' service and parts business in the January to July period climbed 7.3 percent over the volume for the year-ago period.

The seven-month indicators lined up this way: total labor sales, up 7.5 percent; sales of all parts and accessories, up 7.1 percent; shop parts sales, up 7.0 percent; gross profit, up 5.9 percent; and repair orders written, up 0.9 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
109.3★

	July '90 vs. July '89	Jan.-July '90 vs. Jan.-July '89
Gross Profit on All Labor and P&A Sales	+ 8.5%	+ 5.9%
Repair Orders Written	+ 3.5%	+ 0.9%
Total Labor Sales (Customer & Warranty)	+12.0%	+ 7.5%
Shop Parts Sales (Customer & Warranty)	+ 9.3%	+ 7.0%
Sales of All P&A	+ 6.9%	+ 7.1%

★ Survey by Automotive News shows that dealers' service and parts business in July 1990 was 109.3 percent of business in July 1989. Service business in the first 7 months of 1990 was 107.3 percent of business in the corresponding period in 1989.

Examining a pickup bed liner during a product display at Livernois Vehicle Co. are, from left, Loring Ebersole, buyer; Mike Skinner, purchasing specialist for Ford Parts and Service Division; and William Buelcher of Ventre Corp., a supplier of accessories to Ford Motor Co.

Ford program to aid design, testing of accessory parts

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

A program to improve the efficiency of accessory parts design and development has been initiated by the Parts and Service Division of Ford Motor Co.

According to Mitch Moran, parts and accessories engineering development and test section coordinator for the division, the new program for supplier parts testing, installation and development is being operated in partnership with the Livernois Group of Dearborn, Mich., a vendor that acts as a liaison between the division and third-party vendors.

"This new program will reduce the cost and development time of new Ford-approved accessories," Moran said. "To the accessory part manufacturer, it means getting into the marketplace more quickly and, as a result, more sales."

According to Moran, the division's parts and accessories engineering staff reviews, installs and tests new accessories submitted to Ford. If revisions are required, the supplier can develop the part itself or retain Livernois to improve the fit and/or function of the accessory before resubmitting it to Ford.

Because of its other Ford-related engineering work, Livernois has access to Ford's prototype fleet, drawings and sheet metal, said Cliff Irey, general manager of Livernois Vehicle Co. He said that this access enables Livernois to easily and quickly estimate accessory installation costs, to issue test requests and to notify parts suppliers of vehicle availability dates.

The Livernois Group comprises six companies offering total metal-working industry capabilities. In addition to the vehicle company, the firms are Livernois Engine Co., Livernois Tool and Die Co., Livernois Automation Co., Livernois Technical Placement Co. and Livernois Forward Industries Co., a maker of nitrogen die cylinder systems.

"The new program is designed to reduce paperwork, expedite supplier/planner product reviews, installations and modifications, and decrease product development time to reach the market," Moran said.

The firm employs 350 people and had sales in excess of $350 million in 1989.

Florida teaches 'autotronics'

By Patricia A. Kelsey
SPECIAL CORRESPONDENT

TALLAHASSEE, Fla. — A pilot program designed to teach entry-level and existing automobile service technicians the art of "autotronics" is under way in Florida.

The program, believed to be the first of its kind in the country, is geared to turning out service technicians capable of addressing the needs of today's electronically oriented vehicles, said T.L. Rushing, director of industrial education for the Florida Department of Education.

"In today's marketplace, you need an electronic technician," he said, "not just a guy who's good with his hands. Those days are gone forever."

To revamp the state's admittedly outdated program, the department formed an industry-technical committee/advisory board, which garnered input from representatives of major domestic and import manufacturers, independents shops and educators.

What developed after two years of work was a two-phase program.

The first step was to develop what Rushing calls a core training program for entry-level applicants. Students with no auto experience learn the basics, according Rushing.

It's a certification-structured course where in one year a student will emerge broadly trained.

The second part of the program is the update, which includes instruction using a computer hooked up to a new vehicle so faults can be inserted from the instructor's console for students to troubleshoot.

The two-year autotronics course is available in five centers across the state.

Isuzu beefs up '91 warranties

CITY OF INDUSTRY, Calif. — American Isuzu Motors Inc. has expanded warranty coverage for all 1991 vehicles.

Under the improved warranty plan, basic coverage and air conditioning coverage remain at 36 months but mileage is extended from 36,000 to 50,000.

Protection against perforation or rust-through corrosion is changed, from five years/unlimited mileage to six years/100,000 miles.

Powertrain protection jumps from 36 months/36,000 miles to five years/60,000 miles.

Sept. supplies of new cars up to 65 days

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Hampered by the crisis in the Middle East and a slow August sales month, combined new-car inventories rose to a 65-day supply on Sept. 1.

The average Sept. 1 inventory level is a 51-day supply.

There were a total of 1,874,130 U.S.-built and imported cars on hand Sept. 1, compared to 1,896,583 on Aug. 1 when there was a combined 58-day supply.

Strong incentive-aided sales last August, the best selling month of 1989, cut Sept. 1, 1989, inventories to a 56-day supply.

On Sept. 1, U.S. carmakers had 1,336,897 cars on hand or a 64-day supply, the fourth lowest days' supply total this year. Domestic stocks stood at a lean 56-day supply in August.

The import supply stood at 537,233 cars on Sept. 1 for a 66-day supply, compared to a 65-day supply on Aug. 1.

Only Nissan, Toyota and Subaru reduced their days' supply of domestically built and imported cars.

General Motors began Sept. 1 with 697,001 unsold U.S.-built and captive import cars for a 74-day supply, a 25 percent increase over the 59-day supply on Aug. 1.

Ford Motor Co.'s combined inventories rose by 6,500 units from Aug. 1 to Sept. 1, as days' supply rose from 59 days to 68 days.

Chrysler Corp.'s inventory level jumped from a 63-day supply on Aug. 1 to 79 days on Sept. 1.

Thunderbird fights battle of bulges

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — When the redesigned Thunderbird and Cougar arrived in dealer showrooms in December 1988, the cars were overweight and over budget.

The situation became widely known inside Ford Motor Co. when engineers were chastised by top management for missing their targets on the cars.

Nearly two years later, Ford has reduced the weight of Thunderbird and Cougar by 60 pounds and has achieved 70 percent of the cost reduction goal, according to James Kennedy, manager of mid-sized specialty car development engineering. Those reductions have been made using lighter and less expensive parts or materials on the two cars.

For instance, the German-made rubber bushings, which cost about $10 apiece on the Thunderbird and Cougar, have been replaced with rate-plate bushings that cost $2.50 to $3 apiece. Ford uses two rubber bushings and four rate-plate bushings on the 1991 cars. The same technique was applied to the stabilizer-bar bushings.

"The idea was to get something that was better, not depreciated, and try to get the cost down," said Kennedy.

Kennedy said Ford wants to get the cost of the Thunderbird/Cougar down to its original (1988) cost target by 1994 and it is ahead of schedule in meeting that goal.

Ford engineers have been able to reduce the cars' weight 18 pounds by using lighter noise dampening/deadening materials. Kennedy also said that Ford saved six pounds by using a rear suspension arm made of a lighter material.

While Ford engineers have removed 60 pounds from Thunderbird and Cougar, it has added features, like a 5.0-liter High Output V-8 engine, which added 20 pounds. The V-8 is optional in Thunderbird base and LX models and standard in Cougar XR7.

The curb weight of the 1991 Thunderbird is 3,550 pounds with the V-6, down 31 pounds from 1990.

Kennedy said Ford could take out "250 pounds if we wanted to," but the procedure would cost a substantial amount of money. For instance, Ford has contemplated using aluminum instead of steel rear suspension arms to further reduce the weight, but the part would be too costly.

"The car is in a sensitive price class; a lot of these actions would make the car cost more," said Kennedy, who has worked on the Thunderbird/Cougar since 1978.

Kennedy said that there was resistance to Thunderbird and Cougar price tags when the redesigned versions were introduced in December 1988. But sales improved when Ford added a $1,500 rebate — and faltered when that rebate was reduced to $1,000.

He added that the real customer value of reducing weight has not been determined. "It's not crystal clear that if you take this much weight out of the car it's going to be beneficial; the customer doesn't weigh his car and say 'Oh, I've got a heavy car,' " he said.

Ford would have to reduce the weight of the Thunderbird and Cougar a minimum of 125 pounds before it changes "inertia class," that is, the EPA weight class that is figured into the car's corporate average fuel economy, Kennedy said.

He predicted that the weight of the cars will not change dramatically over the next couple years. While engineers will continue to find ways to reduce weight, added features put on the car in response to customer demand or government regulations will negate any weight reduction measures.

"The other part of it is a lot of the changes that we see coming in later models, like 1993 and 1994. There are emissions requirements, there are crash requirements — we're going to end up adding air bags to all our cars," he said.

"All those things, like evaporative emissions, are going to add weight. What we're doing is to offset all those weight increases so the car does not get heavier. I don't expect a dramatic weight change in the future years," he said.

Orbital parent says profits doubled in '89

By Padr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — Sarich Technologies Ltd., the parent of Orbital Engine Company Pty Ltd., has more than doubled last year's pre-tax profit with a figure of $19 million (U.S.).

Chairman and chief executive Ralph Sarich predicted that profits should double next year with the business already in hand.

Sarich Technologes derives most of its income from licensing its Orbital Combustion Process, according to the company.

Sarich Technologies also announced that a number of senior executives will move from Perth, Western Australia, to the United States.

Sarich named his deputy, Ken Johnsen, to head Sarich Technology's U.S. subsidiary, Orbital USA.

Based in Tecumseh, Mich., Orbital USA was established last year with the backing of the Michigan state government to mass-produce engines incorporating Orbital technology.

The production validation program for the 1.2-liter, two-stroke unit has proved faster and is more straight-forward than similar programs for conventional four-stroke engines, said a company spokesman.

Johnsen will be responsible for guiding Orbital USA to its 1992 and 1993 production schedules and for paving the way for a U.S. stock exchange listing for Sarich Technologies.

Two other senior U.S. executives were named. William J. Kaska takes on the position of Orbital USA president, and James Cunningham has been appointed general manager.

FORD

FROM PAGE 3

said he sold about 250 Metropolitans in 1989. "The vehicle has been fairly popular with dealers, but the market is going to be eliminated (for Magnum) if Ford does the same thing," said Dinsmore.

Insiders say Ford plans to use a similar concept to build its own full-sized sport-utility wagon. By using an existing chassis and parts from the F-series and Bronco, the project can be less expensive than an entire new vehicle, which could cost as much as $2 billion. No cost estimates on the proposed truck were available last week. Both the Bronco and the F-series will undergo minor facelifts in the 1992 model year.

The new full-sized sport-utility wagon may also help fill the niche left when Ford vacates the full-sized car wagon market next spring. Ford is dropping wagon versions of the Ford Crown Victoria and Grand Marquis.

One company source said Ford plans to build about 40,000 full-sized sport-utility wagons annually. Ford's Dearborn, Mich., assembly plant has been mentioned as a possible production site, although an official from UAW Local 600, which represents Dearborn assembly workers, said Ford has not discussed the project with the union.

Chevrolet and GMC combined sold 89,079 Suburbans in 1989, down from 89,641 in 1988. Based on combined sales, it was the fourth best-selling sport-utility in 1989.

SALES

FROM PAGE 2

from its Pontiac, Buick and Chevrolet divisions, but Oldsmobile and Cadillac were down from sales in the year-ago period.

Sales of the Geo Prizm slid for the second consecutive 10-day period — but for only the third 10-day period this year. Prizm sales totaled 1,580, off 26.31 percent from the year-ago period. Corvette sales plummeted 79.08 percent and sales of the new Caprice were off 28.20 percent.

Buick Regal sales climbed 48.70 percent.

One of GM's brightest notes came from Pontiac, where Sunbird sales skyrocketed 181.43 percent. Sales of the Grand Am rose 34.84 percent.

Chrysler suffered declines in both its car and truck sales for an overall decline of 16.39 percent. Chrysler's stable of Eagle and Chrysler cars reported increased sales, but Dodge and Plymouth were down — Plymouth was off 44.22 percent and Dodge was down 5.75 percent.

Among transplants, Nissan came out blazing with a 150.07 percent increase in car sales and a 175.25 percent hike in truck sales for a combined vehicle sales hike of 164.15 percent.

Honda's sales rose 89.10 percent; Mazda was up 82.91 percent; and Toyota soared 70.94 percent.

Mitsubishi was the only transplant with lower sales, down 21.74 percent.

Note: Some makers offer rebates to buyers of 1988 and 1989 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

INCENTIVES

FROM PAGE 2

for September sells 55 units, he gets nothing for the first 25 units sold, $250 per unit for the next 12, $750 per for the next 12 and $1,000 each for the next six.

September's sales objective can be achieved by selling cars out of the dealer's inventory.

If dealers meets purchase quotas for October, they can qualify for paybacks of $1,000 per eligible unit sold, retroactive to the first unit in the 50.1 to 75 percent pay level. Sales objectives change monthly.

The program is unusual because Chrysler recently has used dealer rebates on individual, high-inventory models, not the entire line.

Elsewhere, Mitsubishi Motor Sales of America Inc. announced both dealer and consumer rebates on cars, sport-utilities and trucks. The payments vary by regions. All regions are paying dealer rebates on 1991 trucks and vans, and one region is paying Mitsubishi's first dealer rebates on 1991 cars. The programs expire Sept. 30.

Consumer incentives range from $500 to $2,000 on 1989 and 1990 cars and sport-utilities. Dealer rebates are $250 to $2,500 on 1989 and 1990 cars and sport-utilities, and $600 to $1,000 on 1989, 1990 and 1991 light trucks, vans and wagons.

Mitsubishi will offer incentives for the first time on its 1991 cars to dealers in the Northeast. Incentives on the 1991 Galant are $300 on the base model, $500 on the LS and GS and $750 on the GSX.

Audi of America Inc. has increased the dealer rebate on its 1990 100-series cars from $1,500 to $3,000 and extended the program through Dec. 31.

Toyota (1991 models)		
Corolla, Camry	$200-$1,000, quota	Nov. 2
Volkswagen (1990 models)		
Golf	$500	Dec. 31
Fox	$500	Sept. 30
Corrado	$1,500	None
Volvo (1989-90 models)	$200-$600, based on number sold	Sept. 30

Note: Some makers offer rebates to dealers on sales of 1989 and 1990 models. Most of those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

RENTALS

FROM PAGE 1

tracts cover rental cars, and I intend to take full advantage of that," said Chris Exposito, general manager of New Union Chevrolet in Kansas City, Mo. New Union was one of the dealerships in the pilot program.

Some vehicles may have to be rented five days a week for a dealership to break even on the rental program, let alone make money, said one dealer who did not want to be identified.

But not all dealers agreed.

"It has helped build our rental car income . . . 20 to 30 percent," Exposito said.

The best advantage of the rental program may be realized in the used-car department, said Dan Ladd, owner of Courtesy Chevrolet of Kansas City, Mo.

"We're going to own a car for the average price coming out of auction, and we're going to know the car and how it was serviced," he said.

"They're also going to be equipped the way we want and be the colors we want."

Not all dealers are rushing to sign up, though.

"I elected not to go on it," said Pat Duckers, sales manager at Jay Wolfe Chevrolet in Kansas City, Mo.

"We have trouble watching four rental cars, let alone 15 or 20. We're going to wait six months and then decide whether to get in," Duckers said.

Another dealer who isn't interested is Gordon Stewart, owner of two Chevrolet dealerships in the Detroit area.

He said he would rather sell cars and not get involved with rentals.

"It's a terrible business to be in," he said.

"And if you have a good rental operation and a bad used-car department, you'd kill yourself," he added.

Honda Power Equipment shifts to Georgia site

DULUTH, Ga. — Honda Power Equipment, a division of American Honda Motor Co. Inc. and producer of lawn mowers, has relocated its national administrative headquarters here from Gardena, Calif.

Steve Bailey, senior manager of sales operations, said the reason for choosing Georgia was its locale, which he said is near Honda's research and development facility in Ohio as well as Honda Power Equipment Manufacturing in North Carolina.

The sales and marketing, service, dealer development, training, engineering support, product planning and customer relations operations are all housed in the headquarters.

OBITUARIES

Thomas J. Ferguson Jr.

BROCKTON, Mass. — Thomas J. Ferguson Jr., a former regional manager for Chrysler Corp., died Aug. 22. He was 69.

Preston Kearsley

SALT LAKE CITY — Preston Kearsley, president of the Utah Automobile Dealers Association for the past 10 years, died Aug. 8. He was 52.

Model-year build dips 11%

By Karen Detkowski and Anne Wright
AUTOMOTIVE NEWS DATA CENTER

North American car production for the 1990 model year plunged 11.27 percent from the 1989 model total. The 1990 model-year total barely edged past seven million, as automakers built just 7,046,084 passenger cars in the United States and Canada.

The decline was entirely attributable to U.S. factories, where the 1990-model car production total of 6,060,227 was off 14.25 percent from the 1989 model year and was the lowest model-year build since the 5,768,893-car total in the 1983 model year.

The U.S. 1990-model car total suffered as sales slumped, dealers kept leaner stocks and Chrysler Corp. closed its Jefferson Avenue plant in Detroit in February 1990.

In addition, General Motors closed its Framingham, Mass., plant at the end of the 1989 model year and its Willow Run, Mich., plant remained idle throughout the 1990 model year.

In May 1990, Ford Motor Co.'s Edison, N.J. facility, completed production of the 1990 Escort. The plant was retooled for the production of the 1991 Ford Ranger.

While production declined in the United States, Canadian car output in the 1990 model year rose 12.87 percent above the 1989 model year, barely missing the million-unit mark.

A major contributor to the increase in Canada was Toyota's Cambridge, Ontario, plant, which hiked Corolla production more than 300 percent.

Chevrolet Lumina — the car production volume leader in Canada — was not produced in the 1989 model year.

In the United States, high inventories and slow sales plagued output at the onset of 1990 model year, and automakers were forced to cut production schedules.

Signs of slow model-year production began in December when GM extended Christmas vacations at eight U.S. assembly plants.

Throughout January 1990, 24 Big 3 U.S. car assembly plants and one transplant, Mazda Motor Manufacturing USA Corp., were idled at various times due to lagging sales.

Transplants and joint ventures in the United States accounted for 21.65 of the cars produced in the model year.

The volume leader in the United States was the Ford Taurus with 333,001 units, followed by Chevrolet Cavalier, 310,951; Chevrolet Corsica/Beretta, 306,807; Honda Accord, 273,612; and Pontiac Grand Am, 197,020.

Subaru-Isuzu Automotive Inc. was the newcomer to U.S. manufacturing in the 1990 model year. The company assembled 11,849 Subaru Legacys and continues 1990 production of the Isuzu pickup until Oct. 4.

BIRMINGHAM

FROM PAGE 3

Attracting more attention will be the £48,000 (approximately $26,000) Lotus Carlton; the first of the 180 mph saloons will be delivered before the end of 1990. Lotus has upgraded the Esprit range by dropping the non-turbo model; GM-sourced ABS is now standard.

Rover is on a roll with its latest products and will debut the sporting three-door 200 models. The range will extend from a low powered entry-level model up to the 130 horsepower 16-valve Honda twin-cam flagship. Rover's star model may well be the snappy revived Mini Cooper. For the executive Rover 800 model, there is at last a turbo diesel derivative.

The five-door Land Rover Discovery makes it show debut with the limited-edition Range Rover CSK.

The lethargic Jaguar 2.9-liter engined XJ6 was never sold in the United States, but that may change with the launch of its 24-valve 3.2-liter successor. For the first time, Jaguar has tauter sports pack suspension available for XJ6. From another Ford property, Aston Martin, there will be the premiere of the Virage Volante convertible.

Not surprisingly, the show will preview the new United Kingdom-built Nissan Primera, which has already made its U.S. debut as the Infiniti G20. Dramatically more stylish than its Bluebird predecessor, the Primera has an 80 percent European Community content.

Launched earlier this month is the new Volvo 940/960, powered by the all-new Porsche-designed six-cylinder engine. The 24-valve, aluminum engine produces 204 horsepower; there is also a new turbo diesel. The new model replaces the 760 and several 740 derivatives and is similar except for a more rounded rear window and standard rear independent suspension.

Volkswagen has chosen one of the Polo's top export markets to launch a long overdue facelifted version. The updated styling is smoother and the interior is all new. VW has beaten the opposition by fitting all Polos with fuel injection and catalytic converters as standard. Birmingham also will mark the first look at the all-new VW Caravelle (Vanagon), which is sleeker and has front-wheel drive.

The Skoda Favorit station wagon also will debut.

PORSCHE

FROM PAGE 3

during the fiscal year that ended July 31, compared with 7,510 944s and 2,786 928s.

Two years earlier, Porsche produced 13,463 911s, 14,166 924/944s and 4,096 928s. But Porsche officials were anxious last week to downplay talk about the end of the line for the 944 and 928 models. "We will still live with these products for many years," said one company official.

The redesigned 944, dubbed the 968 inside the company, will debut at next year's Frankfurt show and feature front- and rear-end changes that bring the car visually closer to the 928. The car will have interior improvements and more output from the 3.0-liter, 4-cylinder engine.

The 928 will be freshened one or two years later. But the new long-term strategy marks a fundamental change for the West German sports car maker and, potentially, a risky one. Indeed, Porsche insiders are nervous about comments in the press that it will build a "sedan," and they cringe at the term "four-seater."

An internal Porsche memo issued last week stressed that the car should be referred to as "a Porsche for more than two."

The memo made several points: Porsche does not need a second 911 model, but it does need a four-place sports car; the 911 will remain the backbone of the line and undergo further development; the 944 remains a critical part of the range that will receive significant investment; and "possibilities are not yet used up" for the 928.

The car will be fitted with the new narrow-angle V-8 engine that also may replace the air-cooled flat six in the rear-engine 911 if it can be made sufficiently compact. The new powerplant would displace 3.5 to 4 liters, receive four-valve technology and develop up to 400 horsepower.

An insider said the new car is conceived with a short snout, large cabin and sports car shape.

PRICES

FROM PAGE 2

Ford Motor's 1991 increases over final 1990 prices range from $25-$26 on the Mercury Sable LS sedan and wagon to $1,572 on the Lincoln Town Car Signature model.

Some lines — like Mercury Sable and Ford Taurus — which received big pre-introduction price hikes, wound up with more moderate boosts in the second round.

Others — like Ford Escort and Mustang and Mercury Tracer — received bigger increases the second time.

The planned price hikes on Ford Tempo and Mercury Topaz were rescinded; those 1991 models are priced the same as at the end of the 1990 model year. They had been scheduled to rise $363 to $404.

The base Mercury Cougar, down $248, is the only Ford Motor car to show a year-to-year price cut.

Ford Thunderbirds are up $277 to $548, considerably less than the original boost of $742 to $875.

The Australian-built Mercury Capri convertibles, which were introduced in July and were not included in the pre-intro hikes, went up $398 and $402 in the second pricing exercise.

Ford Crown Victoria and Mercury Grand Marquis sedans retained their $542 to $555 price hikes, but similar boosts on the wagons in those lines were rescinded.

PRODUCTION

7-millionth trails 1989 by a month

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. car and truck producers assembled their seven-millionth vehicle last Tuesday, Sept. 11. Last year, the seven-millionth vehicle was produced Aug. 15.

Year-to-date, U.S. car and truck production is 7,169,586, 9.71 percent below the year-ago mark of 7,940,929. This year's total comprises 4,332,987 cars and 2,836,599 trucks.

Last week, U.S. automakers scheduled output of 136,978 cars, 22.30 percent above the previous week and 3.18 percent behind the year-ago week.

Truckmakers assembled 79,043 units last week, 15.94 percent above the prior week and 10.49 above the same week in 1989.

Companies split last week's targeted car production as follows: General Motors, 47.53 percent; Ford Motor Co., 19.04 percent; Chrysler Corp., 12.99 percent; Honda of America Manufacturing Inc., 6.22 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.20 percent; Diamond-Star Motors Corp., 3.02 percent; Mazda Motor Manufacturing (USA) Corp., 3.00 percent; New United Motor Manufacturing Inc., 2.92 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.37 percent; Subaru-Isuzu Automotive Inc., 0.60 percent; and Saturn Corp., 0.11 percent.

Ford scheduled Saturday overtime at the Wayne, Mich., assembly plant.

The company also idled the Atlanta car facility and the Lorain, Ohio, truck plant last week due to a shortage of dealer orders.

Production of the Mazda Navajo, the two-door version of the Ford Explorer, began at Ford's Louisville, Ky., truck plant. That facility also produces the two-door and four-door Explorer.

GM scheduled Saturday overtime at the Bowling Green, Ky., plant and Friday overtime at the Janesville, Wis., plant last week. Bowling Green makes Corvettes; Janesville makes Cavaliers.

The Allante line at GM's Detroit-Hamtramck, Mich., plant was idle last week because of a shortage of dealer orders. It is expected to resume production today.

Chrysler scheduled two overtime shifts last Saturday at the Warren, Mich., truck plant.

Cars, trucks gain in Canada

Canadian car production last week was scheduled at 21,880 units, 5.60 percent above the prior week and 11.29 percent above the year-ago week.

So far this year, Canadian automakers have assembled 754,714 cars, 11.09 percent above the 1989 figure.

Truckmakers were scheduled to assemble 17,455 vehicles last week, 28.44 percent above the prior week but 13.91 percent below the same week last year.

Year-to-date, 611,178 trucks have been assembled, 9.00 percent below 1989.

Congress asks makers: What can you do on CAFE?

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The House of Representatives wants the auto industry to stop stalling and spell out what gains in fuel economy can be achieved in five years.

California to slash emissions, Page 4

The blunt request was made last week after an emotional debate on the corporate average fuel economy standard, an issue that has gained steam because of the Persian Gulf crisis.

A bill sponsored by Sen. Richard Bryan, D-Nev., would boost CAFE from 27.5 mpg to more than 40 mpg by 2001. Automakers have insisted they can't achieve that level. But until now, the industry has refused to say what is reasonable.

Rep. Philip Sharp, D-Ind., chairman of the House Energy and Power subcommittee, told the industry he wants answers. And as witnesses at a congressional hearing, industry representatives will be under oath when they offer them, possibly within two weeks.

Sharp's request came as the House finally took up the CAFE issue. Rep. Barbara Boxer, D-Calif., introduced a bill that mirrors Bryan's.

With the November election and recess approaching, the bill has little chance of making it to the floor through normal channels. But Boxer wants to bypass the usual path and rush the bill to a House vote. (A vote on the Senate bill is expected this week.) In the process, she would avoid the Energy and Commerce Committee, chaired by Rep. John Dingell, D-Mich., who has blocked CAFE bills before.

The auto industry is likely to say it can't boost CAFE much higher without shrinking cars significantly.

"We cannot employ front-wheel drive again, capture the benefits of fuel injection again, save 900 pounds of weight again and reduce engine displacement by 124 cubic inches again — while maintaining the size, safety and performance characteristics of the present new-car fleet," said Ronald R. Boltz, vice president of product strategy and regulatory affairs for Chrysler Corp.

Boltz testified last Wednesday. That same day in Detroit, Chrysler Motors Chairman Bennett Bidwell revealed that the company

Lexus boss promises to run over Mercedes

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Lexus entered the luxury market a year ago wearing kid gloves and humbly suggesting it would sell to a lot of Toyota Camry owners moving up.

But now, Lexus has thrown off the gloves and sounded a warning to the Europeans.

"The fact is, we'll ultimately replace Mercedes-Benz because people have realized that they don't have to spend $75,000 for a four-door sedan," said J. Davis Illingworth, general manager of the luxury division of Toyota Motor Sales U.S.A. Inc.

> People have realized that they don't have to spend $75,000 for a four-door sedan.
> **J. Davis Illingworth**
> Lexus Division

Illingworth

Illingworth's boast comes as Lexus and Infiniti claim they are getting more trade-ins than they expected from owners of established luxury makes. Business from the Europeans, they say, has been much higher than expected.

Yet Mercedes isn't disappearing — in fact Mercedes sales have held steady since Lexus' launch in September 1989. BMW sales are off 15 percent, though, and combined sales for Audi, BMW, Mercedes, Jaguar, Saab, Volvo, Cadillac, Lincoln and Acura are down 2.5 percent.

The overall U.S. car market declined about 8.2 percent in the same period. But luxury sales, including 56,448 Lexus deliveries and 15,026 Infiniti sales, increased 5.0 percent.

"European brand loyalty is not nearly as strong as we thought it would be," said William Bruce, general manager of the Infiniti Division of Nissan Motor Corp. in U.S.A., which introduced its Q45 and M30 models last November.

Illingworth bluntly dismissed the idea that Japanese luxury cars have arrived without cutting too deeply into the Europeans' hide.

"I'd say the same thing if I were in their position," Illingworth said.

Chrysler may ease metro-dealer curbs

Big-city dualing could receive OK

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. may allow its big-city dealers to sell other brands in their showrooms. The change would affect up to 600 markets in the United States.

The company may rescind a policy that requires dealers in metropolitan markets to provide an exclusive dealership for each company franchise.

Jeep-Eagle whacks ad buy list, Page 49

In Chrysler parlance, Chrysler-Plymouth is considered a single franchise; so is Dodge car-Dodge truck, and so is Jeep-Eagle.

Chrysler Motors Chairman Bennett Bidwell said the policy review is part of Chrysler's overall effort to help dealers be profitable.

"In metropolitan markets, we are looking at our policy of exclusion," Bidwell said. "Where we may have to give some ground is in the area of stand-alone facilities for a dedicated brand. We are going to be talking about this. We want our dealers profitable."

If adopted, the new policy would mean that dealers could add new franchises to their existing locations without spending the enormous sums typically required to build or acquire a facility in a metropolitan market.

Bidwell declined to comment on

see BIDWELL, page 48

The 1991 Dodge Shadow America, priced at $7,699, is one key to Chrysler's goal to boost market share. The 1990 model carried a $8,985 sticker price.

Chrysler doubles order for '91 Mitsubishi cars

By Mary Connelly and Peter Brown
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Corp., which has been advertising as the company that beats the imports, will double its own imports of Mitsubishi-built cars in the 1991 model year.

Chrysler Corp. will purchase an estimated 80,000 to 85,000 cars and 6,000 trucks from Mitsubishi Motors Corp. in the 1991 model year, according to James Holden, general manager of Chrysler-Plymouth Division.

In the 1990 model year, Chrysler will have bought an estimated 36,000 Mitsubishi cars and 6,000 trucks, said Thomas McAlear, Chrysler Corp. dealer marketing manager. The increase in imports follows a year in which Chrysler had reduced its orders from Mitsubishi. Chrysler's cutback gave the growing Mitsubishi Motor Sales of America Inc. enough new volume to gain a foothold in the daily fleet business.

Under Japan's voluntary export restraints, Mitsubishi is permitted to sell fewer than 195,000 imported cars — its own brand and those badged as Chryslers — in the U.S. market during each 12 months ending

Big 3 '91 stickers up 2% after equipment adjustments

By John K. Teahen Jr.
SENIOR EDITOR

Automotive News estimates that 1991 car prices for the Big 3 have risen an average of 1.98 percent, or $328, over comparably equipped 1990 models.

Without adjusting for year-to-year equipment changes, the *Automotive News* estimate for the Big 3 is an increase of 4.10 percent, or $644. All figures are sales-weighted.

Obviously, the amount of the 1991 price increase depends upon which set of figures you prefer.

Which numbers are correct? Both are. Are the manufacturers trying to pull a fast one? Not at all.

1991 PRICE HIKE OVER 1990 CARS

Not adjusted for equipment changes

	Increase	Pct
Chrysler Corp.	$182	1.2
Ford Motor Co.	452	3.0
General Motors	878	5.5
Big 3 average	644	4.10
Adjusted for equipment changes		
Chrysler Corp.	135	0.9
Ford Motor Co.	312	1.9
General Motors	389	2.3
Big 3 average	328	1.98

All figures are sales-weighted

The increases announced by General Motors, Ford Motor Co. and Chrysler Corp. are for "comparably equipped" cars. Before the comparison is made, last year's prices are adjusted for equipment that has been made standard on the new models.

GM and Ford go even further. Their year-to-year comparisons are based on "average equipped" cars as well as "comparably equipped" cars. Average equipped means equipped the way most customers buy their cars, including option packages and the discounts on those packages. The contents and the discounts may change from year to year.

The makers announce only a percentage increase on those cars. The 1991 hikes are 0.9 percent for Chrysler, 1.9 percent for Ford and 2.3 percent for GM.

Automotive News computes the dollar increase represented by those percentage figures. On 1991 models, it is $135 for Chrysler, $312 for Ford and $389 for GM.

The non-adjusted increase for each company is strictly an *Automotive News* project. The makers do not divulge that information. For 1991, those hikes are:

- 1.2 percent, or $182, for Chrysler
- 3.0 percent, or $452 for Ford
- 5.5 percent, or $878, for GM.

GM's 1991 figures show the widest variance between adjusted and non-adjusted increases — $389 vs. $878. That is because GM added big-ticket items like air bags or anti-lock brakes as standard equipment on many 1991 models.

New-car shoppers can be forgiven for being a bit skeptical about Ford's announced 1.9 percent hike in view of a $1,132 bump (6.97 percent) on a Taurus LX sedan. And the prospects who hanker for Cadillac Coupe DeVilles may challenge GM's 2.3 percent boost when they find the DeVille has gone up $3,080 (11.35 percent).

Pricing cars is not a precise process. Perhaps Frederic G. Donner, former GM chairman, explained it best. In 1965, he told a U.S. Senate committee that pricing is "more an art than a science."

CAW, Ford of Canada settle after strike

By Kathy Jackson and Jim Robinson
AUTOMOTIVE NEWS

The Canadian Auto Workers ended their week-long strike against Ford of Canada Friday afternoon when the two sides agreed to a tentative three-year contract that provides income and job security for the 12,800 auto workers.

The contract calls for wage increases of 3 percent the first year and 2 percent the next two years. Cost of living payments will amount to about $2.38 each year.

CAW President Bob White said the agreement achieves what the union wanted — to protect the workers against Canada's 7 percent goods and services tax which takes effect Jan 1.

"This has to be one of the best agreements we have ever negotiated with Ford of Canada," White said. "It is all encompassing; it meets the needs of our members, and it addresses social concerns."

Other gains by the Ford of Canada workers:

- $100 million fund to protect workers who lose their jobs or who want to take early retirement.
- Annual $500 vacation bonus.
- One cent per hour per worker contribution to a CAW social justice fund.
- One cent per hour per worker contribution to the CAW child care program.
- One year's notice on any plant closing and six-month notice on any job losses as a result of outsourcing.
- Nine four-day work weeks per year.

White's goal was to protect the income of workers. He has said corporations cannot guarantee jobs.

But the CAW did win some gains — similar to those in the tentative pact between the UAW and General Motors — that could help to save jobs.

On outsourcing, the union has the first right to try to retain the work before Ford subcontracts the work.

If the work is outsourced, workers can get up to two years supplemental unemployment benefits based on seniority. Older workers can take early retirement with no reductions in benefits.

In the case of plant closings, workers can receive either from two to three years of full income protection, early retirement or severance pay ranging from $25,000 to $65,000.

The tentative agreement was to be presented to the membership Sept. 23 for ratification.

Harrigan

O'Connor

Ford of Canada to get U.S. boss

By Alex Law
STAFF CORRESPONDENT

OAKVILLE, Ontario — Ford Motor Co. has named the first American since Edsel Ford in 1929 to head its Canadian subsidiary.

James G. O'Connor, currently general sales and marketing manager for Ford's Parts and Service Division in Dearborn, Mich., will become president and chief operating officer of Ford of Canada Oct. 1. Current President Kenneth Harrigan will move up to chairman until he retires in 1992. Harrigan, who has been president since 1981, will be the third consecutive Ford of Canada president to serve a long stint in the office before a transition term as chairman.

O'Connor's career path suggests he'll move beyond Ford of Canada before he retires. Until 1988, the 47-year-old New York native was executive director of Ford's marketing staff — a job currently held by Edsel Ford II. From 1984 to 1986 he was vice president of sales and marketing at Ford of Canada.

Other moves effective Oct. 1 are:

- Jack G. Clissold, currently vice president of sales and marketing in Canada, succeeds O'Connor.
- Ted C. Goellner, currently marketing representation manager for Lincoln-Mercury Division in Detroit, becomes vice president of general sales, replacing Udo Kaul, who becomes marketing director of Ford of Britain.
- John D. Radford, sales programs manager at the Ford Division in Detroit, returns to Canada as vice president of general marketing.

COSTLY GAMBLE?

Analysts say new pact benefits workers, but could saddle GM with higher costs

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

The pattern-setting agreement signed by General Motors and the UAW is a good one for workers and transplant automakers, but could prove to be a costly gamble for the No. 1 automaker, say some analysts who have studied the tentative agreement.

GM has committed $4 billion over the three-year pact to guarantee wages for all 310,000 of its workers, but if many of them aren't enticed to take the sweetened buyouts, GM still could be burdened with too many workers plus high pension and health care costs — disadvantages the transplants don't have.

Ford Motor Co., with a stable workforce, can likely follow the GM contract pattern at a much lower cost than GM.

But health care costs and increased pensions will burden Ford and, particularly, Chrysler Corp., which has more retirees than active workers.

"The Japanese don't have major costs related to health care and pensions, so with this contract the competitive disadvantage has been widened," said Leo Troy, economics professor at Rutgers University.

Money isn't the only thing union workers got. They have a say in outsourcing and quality, ways they believe they can help GM increase sales.

"I think GM has made a commitment to grow the business," said UAW Vice President Steve Yokich. "As GM's market share grows, and we believe it will grow, we're going to get younger workers in the plants."

Harley Shaiken, professor of work and technology at the University of California San Diego, said that by guaranteeing wages and keeping benefits intact, GM achieved two important goals — cooperation of the union and the flexibility to downsize its workforce. That downsizing can occur with buyouts, innovative plant work schedules and possible plant shutdowns.

"The increased costs for pensions, health care and wages will

see SETTLEMENT, page 50

THE GM-UAW PACT, BLOW BY BLOW

Highlights of the tentative contract between GM and the UAW include:

- Layoffs restricted to 36 weeks for any worker over the life of the three-year contract.
- Full pay and benefits beyond the 36-week layoff period with workers placed in a Jobs Bank.
- 30-and-out pensions raised from $1,500 to $1,800 a month. Maximum outside pay limit raised to $15,000. All basic pension benefit rates raised to at least $20 per month per year of credited service.
- 26 weeks of additional Supplemental Unemployment Benefits for laid-off workers with less than 10 years seniority; 52 additional weeks for workers with more than 10 years seniority; 12 more weeks for laid-off workers at four idled plants.
- $15,000 to $72,000 for voluntary termination packages.
- Tighter restrictions on outsourcing, giving UAW the opportunity to comment and bid on work before an outside contract can be granted.
- No givebacks on health care.
- Three percent wage increase the first year and 3 percent lump sum bonuses the subsequent two years.
- Increased penalties on excess overtime that range from $1.25 to $5 per hour.
- Retention of the one-for-two attrition policy which requires the company to hire one person for every two who leave.

— Kathy Jackson

Corrections

- A chart on General Motors' plans for electronic transmissions last week included references to a car model that was discontinued. Chevrolet no longer sells the Celebrity.
- Yugo America Inc.'s powertrain warranty is for four years/40,000 miles, not two years as reported last week.

Chevrolet, Ford both lay claim to '90 sales crowns

AUTOMOTIVE NEWS-JOE WILSSENS

Along with '91 cars, Chevrolet's intro included a showroom of the future concept.

Perkins: We'll 'kick butt' in '91 too

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet, clearly crowning itself autodom's king of the hill, trotted out its 1991 lineup last week and predicted that only a Middle East war or a deep economic downturn could keep it from selling 2.8 million cars and trucks in the 1991 model year.

Monte Carlo name may return, Page 47

Chevrolet expects to sell 2.6 million cars and trucks in the 1990 model year, which ends Sept. 30.

After a model year in which it regained the industry passenger-car sales leadership from archrival Ford, Chevrolet is ready to "kick butt" in 1991 too, General Manager J.C. Perkins said.

"One thing you've got to admit — what our friends from Dearborn understand very well — is that Chevrolet just keeps coming at you . . . because that's what winners do," Perkins boasted.

He said Chevrolet expects to finish the 1990 model year with sales of more than 1.3 million cars, including 300,000 Geos, and nearly 1.3 million trucks. That will make Chevrolet No. 1 in cars and No. 2 in trucks, behind Ford. Perkins made it clear that the truck position is unacceptable.

"In trucks, we're holding share, but we just can't seem to break through to the No. 1 spot," he said. "It's a little bit of a frustration for us. We haven't accepted it, certainly we're not satisfied with that. Being in second place is not OK."

Perkins predicted Chevrolet will sell 1.4 million cars and nearly 1.4 million trucks in the 1991 model year, "in the absence of a shooting war in the Middle East" and "depending on what happens to the total industry."

AUTOMOTIVE NEWS-JOE WILSSENS

Ford Division General Manager Thomas Wagner, left, and Lincoln-Mercury General Manager Ross Roberts lauded their divisions' performance for 1990.

Wagner: We're on a roll with Escort

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite being more than 50,000 units behind Chevrolet in calendar-year-to-date car sales, Ford Division predicts that it can retain its total-vehicle sales crown for the 1990 calendar year because of its predominance in the truck market and a recent sales surge for the 1991 Escort.

Ford Division General Manager Thomas J. Wagner said last week that Ford Division will increase its car market share from about 14.4 percent in the 1990 model year to 15.5 percent in the 1991 model year. He said Ford's truck market share will grow from about 29.1 percent in the 1990 model year to 30 percent in the 1991 model year.

"For the 1990 calendar year, we'll be 29.7 percent or 29.8 percent (market share) on trucks, and our goal is to get back to 15 percent on cars," said Wagner. The truck market share includes heavy-, medium- and light-duty trucks.

Ford projects 9.3 million to 9.4 million car sales and 5 million truck sales for the industry in the 1990 calendar year. Sales for the 1991 calendar year should be "no worse than 1990," Wagner said.

One key to Ford's regaining car leadership is to increase Escort sales, which have dipped significantly from 1989 because of the changeover to new Escort models earlier this year.

Wagner said Escort sales reached their earlier market penetration level — around 3 percent of industry car sales — in August. By the end of September, Wagner said, Escort should grab 4 percent of industry car sales.

"Escort is coming on very strong; from the first 10 days of August to the first 10 days of September, we were up 242 percent (in retail daily sales rates), so we are really starting to

Mexico City ready to ban old cars to cut pollution

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — A ban on all automobiles more than 10 years old appears likely to figure among the sweeping anti-pollution measures that Mexico City's mayor says will be announced Oct. 15.

On that day, a master plan aimed at improving the metropolitan area's environment will be revealed, Mayor Manuel Camacho Solis said.

The mayor declined to mention specifics. But sources close to him have spoken of a ban, to be introduced in 1994, on 10-year-old cars.

Ramon Ojeda Mestre, who is in charge of contamination control in the Mexican capital, said authorities envisage making low-interest loans, repayable over five years, available to people who want to replace old cars with new models. Ojeda Mestre said authorities would purchase the old models. Trucks and commercial vehicles would not be included.

According to Ojeda Mestre, 80 percent of the metropolitan area's 3 million passenger cars are at least 10 years old. They cause most of the air pollution that has turned Mexico City into the world's unhealthiest metropolis, he said.

Authorities in Mexico have already taken several steps to combat the pollution crisis. Among them:

- Beginning with the 1991 model year, all vehicles produced by Mexico's five carmakers — Chrysler, Ford, General Motors, Nissan and Volkswagen — must have catalytic converters.
- Last week the government put a new high-octane lead-free gasoline, Magna Sin, on sale throughout the country, specifically for use in the new models.

Mercedes, Mitsubishi plan 4wd vehicle

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Mercedes Benz AG and Mitsubishi Motors Corp. plan to jointly develop a four-wheel-drive vehicle for the world market, based on the Mitsubishi Pajero and Mercedes Gelandewagen.

The project was one of 11 topics discussed at the second meeting of Daimler-Benz and Mitsubishi group companies as they seek to form a closer alliance, and it was one of the few areas in which concrete progress was announced.

Details of the 4wd development have been "nearly decided," according to Gerhard Liener, Daimler-Benz chief financial officer.

Mitsubishi Motors Corp. produces about 120,000 Pajeros annually, and Mercedes-Benz produces 10,000 of the upscale Gelandewagens, and "that is too little," Liener said. "We cannot use economy of scale." The companies hope to combine "both lines into one," with a Pajero base and a Gelandewagen body. The combination could provide volume of 100,000 to 150,000, Liener said.

Daimler-Benz and Mitsubishi, two of the most powerful conglomerates in the world, held their first joint meeting in Singapore in March.

They had intended to meet once a year to discuss ways of cooperating in many areas of research from automobiles to electronics, and particularly aerospace.

The second meeting was held in Tokyo just six months after the first, primarily because the Daimler-Benz management team was in Japan for the introduction of the company's shares on the Tokyo Stock Exchange.

Daimler-Benz Chairman Edzard Reuter said talks are progressing enough to say that "permanent ties could come about" between the two groups.

Both sides also agreed to bring together the various channels selling Mercedes cars in Japan under what they called a new "alliance" that will include Yanase & Co. Ltd., the importer that has been handling Mercedes vehicles for more than 35 years.

In the last two years, Mercedes-Benz has worked to follow the lead of BMW by setting up its own independent dealer channel with the help of Mitsubishi. But land costs have climbed steeply, slowing the process, and in the end Mercedes still has had to rely heavily on Yanase.

Now, instead of phasing out its relationship with the import company, an agreement will be signed by the end of the year for a new company, Mercedes-Benz Sales Japan. Mercedes will own 51 percent, and Mitsubishi and Yanase will own 24.5 percent each.

Mercedes said that with the new joint venture, it expects sales to reach 1 percent of the total passenger-car market in Japan, which was 4.2 million in 1989. Mercedes sales last year were 31,511 units, about 0.7 percent.

Daimler-Benz also has invited Mitsubishi Motors Corp. to become involved in several Eastern European projects. It is building a new plant in East Germany and has asked Mitsubishi if it is interested in joining the operation. Liener said Mitsubishi has indicated an interest and, when Daimler Benz completes its own concept, it will accommodate Mitsubishi input.

In the Soviet Union, Daimler-Benz is considering production of a mid-sized car and has asked Mitsubishi Corp. to work as a contractor on the facility and to help finance it. But for the time being, Liener said, talks with the Russians on the project are pending.

When the two groups first announced intentions to seek an alliance, public attention was on aerospace. But so far, the most specific agreements have been in automotive areas.

JOLLY GOOD SHOW

Britain hopes Birmingham spurs sales

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

BIRMINGHAM, England — While several facelifted and new models — ranging from a Skoda wagon to Aston Martin's Virage Volante — made their debuts at the British International Motor Show, slumping new-car sales in England hung over the biennial Birmingham extravaganza like a cloud.

As usual, Birmingham was a showcase for the United Kingdom's small, independent sports car makers. But while such firms once counted heavily on the U.S. market, the strength of the pound against the dollar and the increasing complexity of U.S. regulations is causing several to cancel or postpone U.S. plans.

Car sales in the United Kingdom are down about 12 percent for the year. Industry executives hope this show will spur sales.

Ford's new Escort/Orion twins made their public debut here.

Rover Group, the only British-owned volume carmaker, showed the Rover 216 GTI sport version of its new lower-medium-class model. Its Land Rover Division introduced a five-door version of the Discovery sport-utility.

Jaguar unveiled an XJ6 sedan with a new 24-valve, 3.2-liter AJ6 engine derived from its 4.0-liter unit. The 3.2 replaces the AJ6 2.9-liter that is not offered in America. The 200-horsepower output of the 3.2 represents a 35 percent hike.

Nissan introduced its British-built Primera sedan, the successor to the Bluebird model that has been produced at its Sunderland, England, assembly plant. The new car debuts as a four-door sedan and five-door hatchback. The U.S. version is the Infiniti G20.

General Motors showed facelifted versions of its Opel Omega/Vauxhall Carlton sedan and Spanish-built Opel Corsa/Vauxhall Nova supermini.

Volkswagen introduced a facelifted version of the Polo with a more aerodynamic shape and new interior and displayed its Transporter/Caravelle (Vanagon) van for the first time.

Birmingham is also the first auto show appearance for Volvo's new 960/940 sedan range.

BRYN WILLIAMS PHOTOS

Birmingham saw the public debut — and offered a bird's-eye view — of Ford's new Escort/Orion twins.

Porsche AG chose Birmingham to launch its Carrera RS, a sport version of the Carrera 2.

Porsche AG chose Birmingham to launch its Carrera RS, a sport version of the Carrera 2. Hans Halbach, executive vice president for sales and marketing, said production will start in 1991 and will be limited to 1,800 units.

The most glamorous new model was Aston Martin Lagonda's Virage Volante, the convertible version of the 32-valve, 330-hp, V-8-powered Virage sedan.

Production of the Volante, a two-seat convertible with a fully automatic, hydraulically powered top, begins next summer. Currently, Aston is producing about six Virages a week. The company will finish 220 this year and about 275 Virage and Virage-derived models in 1991. The Virage debuts in the United States this fall.

Aston Chairman Victor Gauntlett said the 500-hp Vantage supercar version of the Virage will debut at the Geneva show next March.

While Jaguar, Aston and Group Lotus are no longer British independents, there remains a cadre of tiny British sports car specialists; several showed new models here.

Two years ago, Reliant Group and its U.S. distribution partner, Universal Motors Group, unveiled a restyled version of the Scimitar two-seater by independent designer William Towns that was to be sold in the United States under a different name. But the deal with Universal has stalled, and plans to produce the much rounder Towns-redesigned car for U.S. sale are no longer active, said Reliant marketing director Mike Bennett. Nor are there any plans for U.S. sale of the SST, Towns' newer and less radical reshaping of the original Scimitar.

Ginetta Car Ltd., a tiny maker with a long history, exhibited a G32 mid-engined convertible and G33 V-8 roadster. The two-seat G32 convertible with glass-reinforced polyester body shell is derived from Ginetta's coupe and is available with 1.6- or 1.9 liter four-cylinder engines. The all-new G33 uses Rover's 3.9-liter, 200-hp or 3.5-liter, 145-hp engine. The 3.9-liter two-seater is Ginetta's highest-priced car at 17,800 pounds ($34,000).

TVR Engineering's new 3.9-liter, V-8-powered Griffith two-seat convertible, priced at £17,618 ($33,650), goes into production in November, and the first cars will reach dealers in January.

TVR also previewed the 2+2 Speed Eight convertible, which will go on sale next spring with two V-8 power packages, including a 286-hp 4.3-liter model that will sell for £27,495 ($52,515).

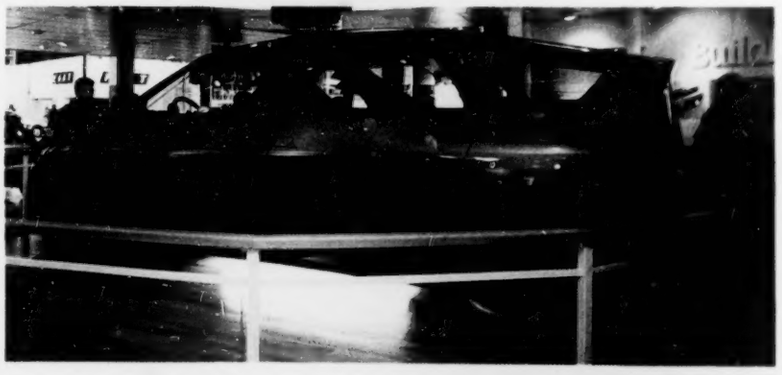
TVR sold cars in the United States up to about 1984 but has no plans to return, primarily because of the currency situation.

Morgan Motor Co. Ltd. has annual U.S. sales of 25 to 30 propane-converted Plus Eights through a distributor out of total production of about 450. Though a catalyst-fitted 3.9-liter Rover engine was unveiled here, Chairman Peter Morgan said he expects U.S. sales to remain about the same.

In recent years, the United Kingdom has been the largest hard-currency market for Eastern European makers. The Czechoslovakian carmaker Skoda picked Birmingham to show the station wagon version of its Bertone-designed, front-wheel-drive Favorit subcompact.

FSO Cars Ltd., the British importer for Poland's FSO factory, showed a one-ton pickup based on the compact Polonez sedan.

A facelifted version of Volkswagen's supermini competitor, the Polo, debuts with a more aerodynamic shape and a new interior.



Mazda showed the Gissya MPV concept vehicle developed at the company's research and development center in Oberursel, Germany. The Gissya features four-wheel-drive, four-wheel-steering and a 200 horsepower triple rotor rotary engine.

Europe's car sales slip in August; year's total falls below '89

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales dipped 3.8 percent in August to drag the year's total below 1989's record pace for the first time this year.

Sales in 17 Western European countries during the month totaled 1,174,700 units, according to industry estimates compiled by *Automotive News*. Volume for the first eight months of the year in Europe was 9,515,400, off only one-tenth of one percent from 1989.

The biggest losers among nations so far this year have been the United Kingdom, reeling from high interest rates that have depressed the car and truck markets, and economically sidetracked Sweden.

But the biggest market, West Germany, is going strong. Sales increased 16 percent in August and were up 5.9 percent through the first eight months. That puts Germany on track to eclipse its 1987 record of 2.91 million units.

Germany's market leader, Volkswagen AG, has a firm grip on first place in Europe with sales of 1,433,400 cars through August, an increase of 1.2 percent and a 15.1 percent market share.

But the VW Group, which includes the Volkswagen, Audi and Seat brands, dropped 5.5 percent to 150,800 in August. The firm has lost share in its domestic market this year, primarily to Adam Opel AG and Japanese makes.

Second-place Fiat Auto (Fiat, Alfa Romeo and Lancia brands) saw sales slip 5 percent to 112,400 in August and 1.3 percent to 1,385,000 for the year, equal to a 14.6 percent market share.

Freightliner entry boasts improved severe-duty capabilities

PORTLAND, Ore. — Freightliner Corp. has a new FLD 112SD medium-length conventional model for severe-duty work, particularly in on/off-highway dumping applications.

James Hebe, Freightliner senior vice president of sales and marketing, said it is designed to provide improved front axle load distribution and maneuverability.

The new model accommodates Cummins' and Caterpillar's new, more powerful 10-liter engines.

Available as a truck or tractor, the FLD 112SD has a set-back front axle for maximum forward weight distribution and a tighter turning radius.

The cab and chassis components have been designed for durability and long life in severe-service applications, including all types of dump truck applications, transit mixers and refuse service.

The lighter-weight and corrosion-resistant semi-monocoque aluminum cab construction provides greater load capacity, and the fiberglass hood is sloped 9.5 inches to improve visibility.

The vehicle has a chrome steel grille surround. Front fenders and standard steel bumper are swept back 45 degrees for better maneuverability.

Hebe said weight-saving materials, such as the aluminum cab, allowed the company to engineer a vehicle with improved fuel economy and better payload capacity.

The cab is specially reinforced, and the frame has a rigid design. Frame options include stronger or longer rails, with or without full-length steel rail inserts.

The vehicle offers Cummins and Caterpillar mechanical or electronically controlled diesel engines in the range of 8.3 to 10 liters. They are rated at 250 to 330 horsepower.

The compact bumper-to-back-of-cab truck is available in wheelbase lengths to fit all body applications.

Standard and optional equipment includes Fuller and Rockwell transmissions with seven to 15 speeds, front axles rated from 12,000 to 20,000 pounds capacity, Freightliner taperleaf or flat leaf suspensions up to 20,000 pounds capacity and rear axles with ratings up to 58,000 pounds.

Rear suspensions can be spec'd from Freightliner; Hendrickson Suspension Co. of Burr Ridge, Ill.; Chalmers Suspensions International Ltd. of Brampton, Ontario; Neway Division of Lear-Siegler Inc. of Muskegon, Mich.; and Reyco Industries Inc. of Springfield, Mo., in capacities up to 65,000 pounds.

Clutches from Spicer Clutch Division of Dana Corp. of Toledo, Ohio, and power steering from Ross Gear Division of TRW Inc. of Lafayette, Ind., are standard.

Also standard are Freightliner's Soft Rate taperleaf front springs, designed to smooth out the jolts of severe-duty job site work.

Freightliner's Rough Service/High GCW package is standard with the multi-leaf spring rear suspension. "GCW" refers to gross combined weight.

The cab can be specified in a wide range of interior colors and materials.

Component options include four- or six-channel anti-lock brake systems, with Freightliner's Traction Plus wheel-slip control system.

Freightliner's FLD 112SD features a set-back front axle for maximum forward weight distribution and a tighter turning radius.

National's Squire line retails for $35,000 to $45,000, depending on options.

National's sales may get lift from new Squire coach line

By Joseph Bohn
TRUCK EDITOR

The renewed concern over energy will undoubtedly spark some revival in mass transit systems, which should provide a lift to shuttle bus and transit bus manufacturers.

National Coach Corp. of Gardena, Calif., has an all-new bus line, which it will show at the International Public Transit Exposition in Houston, Oct. 1-3.

The company's small coach is geared to airport shuttle bus service, transit dial-a-ride services that pick up commuters at their homes or in small groups and other types of intracity transportation service.

The new Squire coach line has two models: a 23-footer with dual-drive tires and an 11,500-pound gross vehicle weight rating and a 20-footer with single drive tires and a 10,300-pound gvw rating.

The coaches seat 11 to 23 passengers and have a flexible door placement and floor plan options.

Jon Sims, manager of marketing Commercial Division, said the vehicle is built on a rail chassis rather than a cutaway chassis, which is commonly used for such vehicles.

A cutaway chassis has a front cab supplied by the chassis manufacturer. A rail chassis has no cab, so a final-stage manufacturer like National supplies the complete body, including the cockpit.

Sims said the difference is that the Squire is built on a chassis that was designed for a bus. Cutaways are typically built for truck applications.

Oshkosh Truck Co. of Oshkosh, Wis., is producing the chassis for National. It uses Chrysler Corp.'s 360-cubic-inch V-8 and three-speed automatic transmission.

The Squire is 87 inches wide and 104 inches high, weighs just under 10,000 pounds and has a 4,000-pound payload capacity.

Sims said the Squire retails for $35,000 to $45,000, depending on the options. Production will begin in early November at the com-

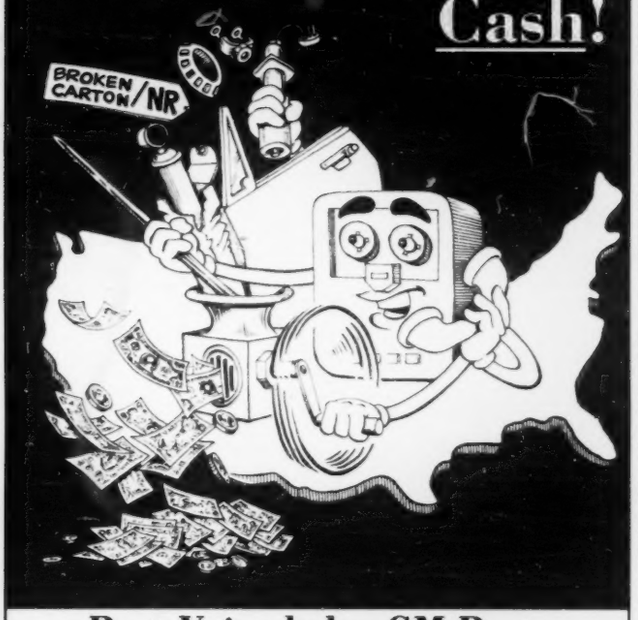
Turn Old Iron into Cash!



PartsVoice helps GM Parts Managers sell their obsolescence.

"I believe PartsVoice has an excellent program that can benefit dealers. Time savings are impressive and the reduction of obsolescence and/or discontinued and non-returnable items is significant."

– Mike Nicholes, internationally-acclaimed consultant to dealers and manufacturers on maximizing parts department profits.

PartsVoice is the computerized parts hotline connecting parts buyers and sellers across America via their touch-tone phones.

We're the nation's largest independent parts locator. The buying service is FREE to all General Motors, Ford, Chrysler, Jeep/Eagle, Mazda, Isuzu, and Nissan dealers. Call us for a free demonstration.

Our customers sell loads of parts to dealers in all 50 states.

And, because PartsVoice works with any computer system (R&R, ADP, etc.), you can buy or sell parts through PartsVoice without purchasing any additional hardware or phone lines.

General Motors dealers have three pricing options. So, whether you've got 2,000 or 20,000 part numbers in your inventory, you will profit by selling them through PartsVoice.

Listing fees begin as low as $15 per month (plus a small, one-time installation fee).

To start turning your old iron into cash, call:

1-800-635-7648
(8 a.m. to 6 p.m., Pacific)

Ford begins engineering expansion

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. is making important investments in its future.

On Sept. 14, the company broke ground in Dearborn for a 125,000-square-foot addition to the front of its Research and Engineering Center. At the same time, the company announced that it will begin building a new 236,000-square-foot Advanced Engineering Center this fall.

"We're here this morning to mark the start of a new chapter in Ford's research and engineering activities," Ford Chairman Harold A. Poling said.

He addressed a gathering of Ford employees and guests that included Allan Bromley, science adviser to President Bush.

He said the company was "beginning its first step in expanding and renovating our research facilities to meet a variety of technological challenges in the next decade and beyond."

The addition to the Scientific Research Laboratories will provide room for expansion of the research facilities' physics, chemistry and metallurgy laboratories. Poling said that inside the proposed Advanced Engineering Center, "intensified research and engineering development will be carried out to reduce noise, vibration and harshness and to enhance the overall driving experience."

Poling told the crowd that the addition and the Advanced Engineering Center represent a $177 million investment.

"Overall, having a high-technology facility where we can locate all of our key people who have been working on the related issues of noise, vibration and harshness; road noise; and body and chassis structures will provide a central focus for this complex work," said Kenneth K. Kohrs, vice president of car product development.

"This new facility will help us apply system engineering technology to the early design phase of our total vehicle development process."

The three-story center will house 32 laboratories, including 14 soundproof hemi-anechoic or acoustic chambers. The garage area will contain extensive analytical equipment and instrumentation to prepare vehicles for testing. The office area for 300 employees will contain training facilities and a computer analysis area.

The $80 million advanced engineering facility will be fully operational in late 1992.

Canada sales off 9.9% in August

Canada's vehicle sales fell 9.95 percent in August, with cars and trucks both dropping.

Sales of cars built in North America were off 7.99 percent, and imported cars were down 17.54 percent. A 4.58 percent rise in imported truck sales did not counter an 8.01 percent fall in domestic trucks, as the whole truck segment ended up down 6 percent for the month.

Volkswagen suffered the biggest proportionate setback, off 2,025 units or 39.92 percent from its record of August 1989.

For the first eight months of 1990, Canadian car sales are off 6.06 percent and truck sales are down 7.32 percent. The losses were mainly on North American-built vehicles.

Imported car sales for the eight months were down 1.53 percent, compared with an 8.05 percent loss for domestic vehicles. In trucks, imports were up 7.09 percent and domestics were down 9.42 percent.

August import sales drop 21.7%; calendar year slips 11.5%

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

Sales of imported cars fell in August and for the January-to-August period, reflecting softness in the market, increased activity from the Japanese transplant facilities in the United States and wariness about the economy.

Import sales for August were down 21.71 percent to 221,546, and the eight-month figure dropped 11.56 percent to 1,706,562.

The brunt of the decline was born by the Japanese, although imports represented only two-thirds of their total sales for the month. The rest were domestically produced. In August, the Japanese sold 153,772 Japan-built cars, down 23.43 percent from last year, and another 98,427 U.S.-built products.

The Europeans sold 45,627 imported cars, down 10.30 percent, and the Koreans sold 22,147, down 29.20 percent.

Although it is impossible to be sure of what motivated import purchases last month, a model-by-model breakdown reveals that the increase in fuel prices may have had an effect on some lines.

In addition, for many importers, August was the last month before their 1991 model changeover, and buyers may have been waiting to see what new products and incentives will arrive this fall.

Audi of America Inc.'s sales rose 7.80 percent. The smaller Audi 80 and 90 sold particularly well, with sales up 77.99 percent and 17.67 percent, respectively.

At BMW of North America Inc., the story was slightly different. The 3 series dropped 7.89 percent, while the bigger 5 series climbed 10.09 percent. In fact, the 5 series was just about the only bright spot for BMW, whose overall U.S. sales dropped 6.74 percent.

Jaguar Cars Inc. was down slightly with the more powerful and more expensive XJ-S falling 30 units and the XJ6 down 24.

At Mercedes Benz of North America Inc., the 2.6-liter "baby Benz" was one of the few bright spots. Sales of the 190 were up 4.61 percent, compared with an overall decline of 5.55 percent. Sales of the 300E 2.6/260E, 420SEL and 560SEC were all down more than 20 percent.

Porsche Cars North America Inc. dropped almost 31 percent; only the 944S and 911 Carerra 2 were up.

Volkswagen United States Inc. sold 582 Corrados, nearly six times as many as in 1989 when it sold only 100. Jetta sales were up 14.59 percent, and the company sold 1,626 Passats. The performances of those three vehicles helped pull total sales to 11,704, 10.04 percent better than last year.

American Honda Motor Co.'s Acura Division dropped 13.38 percent last month, although the entry-level Integra fared well, posting a 6.97 percent increase. Another drop in Legend sales, down 37.58 percent from a year ago, reflects the weakness of the soon-to-be-replaced model.

For the Honda nameplate, import sales dropped 24.04 percent, although the import figure was only 25.6 percent of Honda's total sales for the month. Although declines in Accord and Civic import sales mean little in light of the production that comes out of Marysville, Ohio, the 20.28 percent drop in Prelude sales is significant because there is no U.S. production.

Despite petroleum price hikes, Daihatsu America Inc.'s fuel-efficient cars impressed only 1,106 buyers in August, 16.59 percent fewer than last year. Likewise, Hyundai Motor America's energy-thrifty Excel continued to nosedive. Excel sales were down 41.92 percent, while the bigger Sonata fell 18.80 percent.

Suzuki, too, was behind last year's totals, falling 12.22 percent to 668 cars. American Isuzu Motors Inc., another purveyor of less expensive, fuel efficient cars, appears to be having trouble getting its new Impulse off the ground. Isuzu sold only 316 of them, down 54.27 percent from last year.

Like Honda, Toyota Motor Sales U.S.A. Inc.'s import totals were down in August although its overall sales improved. Only 44.8 percent of Toyota's total sales were derived from Japan-built products. That 44.8 percent amounted to 38,976 cars, or 25.76 percent fewer than last year. Of cars sourced solely from Japan, sales of the big-engined Supra and luxury-like Cressida fell more than 60 percent. Of all the imported cars, only the Celica and MR2 were up.

Nissan Motor Corp. in U.S.A. and Mazda Motor of America Inc. also saw their import sales fall. Nissan's Japan-built Stanza and 240SX and Mazda's Japan-built Protege were the only imported products to show an increase this August over last.

Even the vaunted Mazda Miata had sales this August more in keeping with reality. When the car was introduced last August, 5,029 units were sold; last month, sales leveled off at 3,219.

AUCTION DIRECTORY

TEXAS

San Antonio Auto Auction (div. of GECAA), 1500 Ackerman Rd., San Antonio, Texas 78219. Sale every Weds. Contact: Frank Post or Michael Milikien, 512-661-4200.

TEXAS

Alamo Auto Auction, 2719 Fredericksburg, San Antonio 78201. 12:30 Thurs. Repos, lease, trades. Charlie, 512-736-6510. The South Texas independent auction.

WISCONSIN

Fox Valley Auto Auction, 10mi S of Green Bay. Tues 11:30 am. Same owner lctn for 20 yrs. Fast, efficient serv lease cos & banks. Bx 3127, DePere, WI 54115. 414-336-3121.

WISCONSIN

Metro Milwaukee Auto Auction. Sale every Wednesday. FMC, GMAC, all leasing. 414-835-4436, Caledonia, Wisconsin.

BIDWELL

FROM PAGE 1

whether the company might relax the exclusivity clause only for Chrysler Corp. franchises or if the company might permit competitive makes to be sold from Chrysler Corp. dealerships in metro areas.

Review of such a cornerstone policy is indicative of the financial pressure facing Chrysler's 5,226 dealerships, which retailed 16.8 percent fewer vehicles through Sept. 10, 1990, than they did in the same period of 1989.

Generally, Chrysler has required that dealers granted a Chrysler-Plymouth, Dodge or Jeep-Eagle franchise in a metropolitan market provide a stand-alone dealership for each franchise, although in rural areas exclusive buildings are not mandated.

Chrysler has maintained in the past that permitting a second franchise in a dealership in a metropolitan market does not guarantee that dealership volume will increase. In addition, the company has argued that such dualing creates additional adminstration and dilutes a brand's message.

The policy has meant that dealers in metropolitan markets must make a sizable investment in land and buildings.

Similarly, General Motors has encouraged its dealers in metropolitan markets to have an exclusive facility.

"Where feasible in metropolitan areas, we encourage a single-point franchise," said Robert Ogden, GM's general director of sales operations and dealer relations. "But there are exceptions. We do look at each one on a case-by-case basis as they come up. We have no plans to change this practice."

Ogden said dualing with other GM brands and competitive makes is more common in medium-sized and smaller towns.

Recently, Chrysler dealers have questioned the ability of Chrysler management to sustain a 5,226-member dealer network in view of the company's U.S. market share.

Bidwell said about 70 percent of the company's dealers currently are profitable and that all three dealer networks are making more money than they did in 1989.

He also said Chrysler expects to increase its share of the U.S. car market to 10.5 percent in the fourth quarter, up from 8.9 percent through Sept. 10 of this year.

He said that will be done by introducing the $7,699 Plymouth Sundance/Dodge Shadow America models, becoming more aggressive in the daily rental car business and reducing prices of several cars.

Chrysler expects its share of the U.S. truck market to return to 18 percent in the fourth quarter, although in August it was only 14.2 percent. It will rely on redesigned minivans and Jeep Cherokee price cuts to build market share.

Separately, Bidwell predicted last week that the industry will sell about 9.0 million cars and 4.9 million trucks in calendar 1991.

But he cautioned that precise predictions are impossible because of the Middle East crisis.

Chrysler's divisional general managers said the company expects 1991 model-year car and truck sales to total 870,000 units at Dodge, 600,000 at Chrysler-Plymouth and 275,000 at Jeep-Eagle.

Also at a press preview of 1991 models last week, Chrysler said it expects in early 1991 to offer a driver-side supplemental air restraint system on the Dodge Caravan/Plymouth Voyager/Chrysler Town & Country minivans. No decision has been made on whether the system will be optional or standard. Cost is about $300 per unit.

The system is not called an air bag because it does not meet federal regulations requiring knee bolsters. Chrysler Motors President Robert Lutz said major redesign of the minivan instrument panel would be needed to accommodate knee bolsters.

Lutz cautioned that the company will not market the system if consumer testing shows that people think Chrysler is trying to cheat them by offering less than a federally regulated air bag.

Chrysler said the Dodge Stealth will pace the 75th running of the Indianapolis 500 in May 1991.

Buyers will grade dealer's sales staff

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Next month Chrysler Corp. will begin using a sales satisfaction rating system that allows vehicle buyers to grade dealership salespersons.

The two-part program includes a new sales satisfaction rating system for each Chrysler Corp. dealership and a certification program for dealership sales personnel.

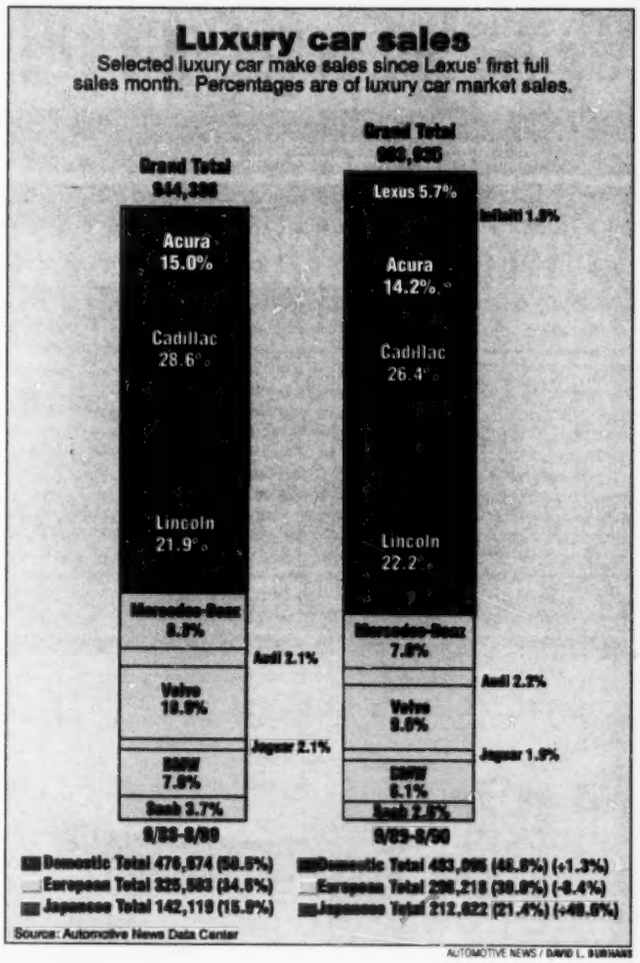
Chrysler will start mailing rating forms to customers in October and dealers will begin receiving monthly reports in January. Previous customer satisfaction surveys asked buyers about vehicle delivery, preparation and product quality.

The new survey also asks buyers within a week of purchase to grade the salesperson on courtesy, sincerity, availability, manner of greeting, overall appearance, product knowledge and explanation of price, warranty and delivery.

Customers also will be asked if they were offered a test drive and whether they would make another purchase through the same salesperson.

Dealers said the new program is aimed at reducing the percentage of buyers who say in surveys they would make the same product purchase from the same dealership but not from the same salesperson.

The certification program for sales personnel begins this fall. Salespeople must maintain a minimum score on the satisfaction survey, complete at least two days of professional sales technique training, score at least 70 percent on all product exams and meet other requirements to be certified.



LEXUS

FROM PAGE 1

"The market has expanded, but not as much as we have expanded."

Officials at Mercedes-Benz of North America Inc. and BMW of North America Inc. view the developments differently.

"There's no question Lexus and Infiniti have expanded the segment. That's good news for all of us if more people are buying luxury cars," said Michael Jackson, Mercedes-Benz senior vice president, marketing and sales.

And Kurt von Zumwalt, Mercedes' new public relations manager, who formerly worked for Toyota, offered a challenge: "Show us where we're hurting," he said. "Show us the blood. It's not there."

Carl Flesher, BMW's vice president of marketing, said Lexus and Infiniti compete with the BMW 5 series, and 5-series sales were up 6.8 percent for the first eight months of 1990. The entry-level 3 series was down 8.9 percent for the eight months, and the top-of-the-line 7 series declined 13.6 percent.

Flesher attributed that dip to competition from the Mercedes S class. But that's also the territory that Illingworth believes will see an exodus of buyers heading for the $38,000 Lexus LS400.

Lexus and Infiniti point to their trade-in experience to show conquest sales. Before introduction, Lexus expected about 60 percent Japanese trade-ins, 20 percent European conquests and 10 percent U.S. conquests, Illingworth said. But European trade-ins have run about 45 percent for the LS400, domestic trade-ins about 30 percent and the Japanese about 12 percent, he said.

Mercedes led the list at 19 percent of LS400 trade-ins from introduction through June, according to Lexus figures.

Cadillac was No. 2, at about 13 percent. Cadillac sales were down 2.9 percent in the 12 months following the Lexus debut, while Lincoln sales rose 6.5 percent.

At Infiniti, Bruce said Nissan expected about 75 percent trade-ins from Japanese car owners buying their first luxury car and 25 percent conquests from people who already owned a luxury car.

But luxury import makes, including Acura, accounted for 49.7 percent, of Infiniti's trade-ins on the Q45 from introduction through early September. Mercedes was No. 1 with about 7.9 percent of the trade-ins, followed by BMW, Jaguar and Acura. Domestic brands accounted for about 32 percent, with Cadillac around 13 percent. Japanese trade-ins accounted for only about 12.3 percent.

> "Show us where we're hurting. Show us the blood. It's not there."
>
> **Kurt von Zumwalt**
> Mercedes-Benz of North America

Lexus outsold Mercedes for the first time in July, by a margin of 312 cars. Mercedes came back in August to outsell Lexus by 289 cars, but Illingworth said Mercedes was giving its dealers "$4,000 on every car they sell."

Dallas dealer Ralph Gaden, chairman of the Mercedes national dealer council, said Mercedes offered a special "dealer marketing allowance" to clear out leftover 1990 models, but not as much as Illingworth stated. Gaden said the allowance ranged from "around $1,000" on smaller cars to $4,000 on the 560SEL and 560SEC. The offer expired at the end of August.

CHRYSLER

FROM PAGE 1

March 31. Trucks are not limited under the quota agreement.

Richard Recchia, executive vice president of the import company, said Mitsubishi will stay in the fleet business. Despite the higher Chrysler orders, the U.S. sales arm can get more of the U.S.-built Mitsubishi Eclipse, in addition to more units of the Mitsubishi Mirage, which will begin U.S. production in November.

In May, Mitsubishi bought controlling interest in Value Rent-A-Car. Mitsubishi also sells to other rental companies.

Mitsubishi Motor Sales of America's sales have soared in calendar 1990 through higher sales of Japanese-built cars plus more cars from Diamond-Star Motors Corp., the Chrysler-Mitsubishi joint venture plant. Through August, U.S. sales of Mitsubishi-badged cars and trucks rose 46.48 percent, to 139,677. In 1986, the peak year of Chrysler's purchases of Mitsubishi vehicles, Chrysler retailed 220,000 Mitsubishi-built cars and trucks.

Last January, a Chrysler executive said Chrysler's dependence on Mitsubishi was waning as Chrysler develops more products that are globally competitive.

"As we get more competitive with the Japanese — and we are a lot more competitive with them — our use of Japanese products is going to keep declining," predicted Michael Hammes, then Chrysler's vice president of international operations. Hammes left the company in May to become executive vice president of Black and Decker Corp.

A Mitsubishi source suggested that the 1990 order dropped because Chrysler had been carrying too many cars in inventory.

And last week, Chrysler Motors President Robert Lutz said: "We took very few vehicles in the 1990 calendar year because we were in a destocking mode due to dealer inventories. But in 1991 we will be back to a normal flow."

The purchase from Mitsubishi will increase in part because Chrysler will give its Jeep-Eagle dealers a three-door Summit hatchback, sold by Mitsubishi as the Mirage. The car, available in late October, will carry a base price under $7,000, and advertising will stress price, said Jeep-Eagle General Manager Lawrence Baker.

In addition, Chrysler will buy from Mitsubishi the new Dodge Stealth sports coupe, the pace car of the 1991 Indianapolis 500 and the sister car to the new Mitsubishi 3000GT.

Chrysler will continue to buy from Mitsubishi the Dodge and Plymouth Colt and the Colt Vista wagon. Mitsubishi sells the Colt in the United States as a Mirage, but does not sell the Colt Vista wagon in the United States.

Chrysler Motors Chairman Bennett Bidwell confirmed that in the 1992 model year, Chrysler will buy the next generation Colt Vista wagon. Chrysler expects to buy about 25,000 Colt Vista units annually, he said.

Chrysler will purchase 6,000 Dodge Ram 50 trucks from Mitsubishi in the 1991 model year. Chrysler said that is the maximum allocation available from Mitsubishi because of production constraints.

Chrysler owns 12.5 percent of Mitsubishi Motor Corp.

Automotive News Staff Reporter Kristine Stiven Breese in Los Angeles contributed to this report.

Slow sales shut four U.S. plants

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

Four U.S. vehicle assembly plants are scheduled to be closed this week due to sluggish sales.

Car production last week was estimated at 148,945 units, 8.85 percent above the prior week and 2.23 percent below the year-ago week.

Year-to-date, U.S. automakers have assembled 4,484,793 cars, 11.54 percent below 1989's total.

Last week, U.S. truckmakers scheduled 90,778 units, 12.82 percent above the prior week and 13.81 percent above last last year.

Year-to-date, U.S. truck production is 2,929,099, down 5.79 percent from last year at this time.

U.S. automakers split last week's scheduled production as follows: General Motors, 45.50 percent; Ford Motor Co., 23.74 percent; Chrysler Corp., 12.55 percent; Honda of America Manufacturing Inc., 5.44 percent; Toyota Motor Manufacturing U.S.A. Inc., 2.98 percent; Mazda Motor Manufacturing (USA) Corp., 2.76 percent; New United Motor Manufacturing Inc., 2.69 percent; Diamond-Star Motors Corp., 2.38 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.38 percent; and Subaru-Isuzu Automotive Inc., 0.58 percent.

Ford plans to idle three assembly plants this week: the Lorain, Ohio, and Chicago car plants and the Louisville, Ky., truck plant. Only one shift is scheduled at the Lorain, Ohio, truck facility this week. All schedule adjustments are due to a decline in dealer orders.

GM's Willow Run, Mich., auto plant is scheduled to shut down today for two weeks. The downtime is due to slow sales and high inventories. Production is slated to resume Oct. 8 when GM plans to run one shift for four weeks. The plant produces Chevrolet and Oldsmobile full-sized rear-wheel-drive wagons.

GM scheduled Saturday overtime at three truck plants: two shifts at Fort Wayne, Ind., and Baltimore and one shift at Moraine, Ohio. Friday overtime was scheduled at the Janesville, Wis., car assembly plant.

Chrysler scheduled two Saturday overtime shifts at the Belvidere, Ill., car plant.

Ford sidelined; Canada plunges

The Canadian Auto Workers struck Ford Motor Co. of Canada last week, closing three Canadian assembly plants, two engine plants and four parts plants. The strike was settled Friday.

With Ford sidelined, car production for the week was estimated at 14,483, down 30.65 percent from the previous week and down 34.55 from the year-ago week.

Truck output fell to 12,597, which was 25.08 percent below the previous week and 36.67 percent below the year-ago week.

GM scheduled Saturday overtime at the Oshawa, Ontario, truck plant. The plant produces Chevrolet and GMC pickups.

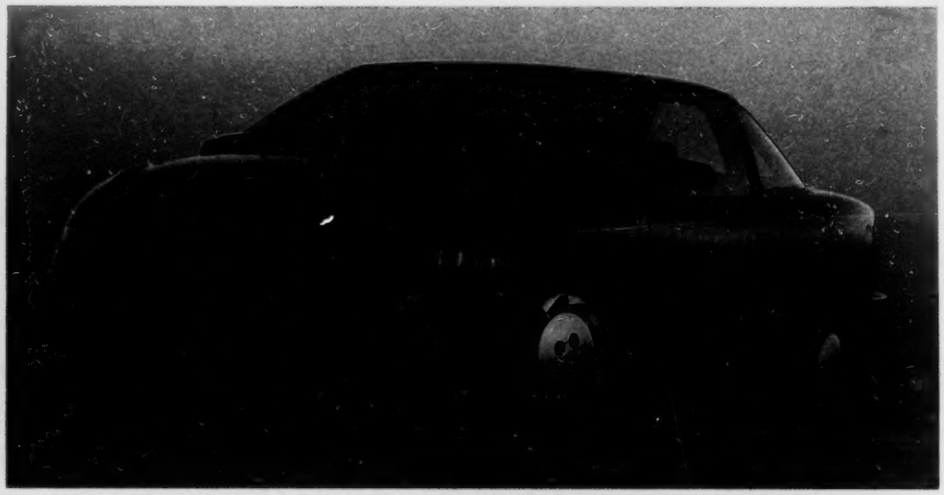
Saturn guns the engine for October introduction



After seven years of anticipation, Saturn's Sports Coupe, pictured here, and sedan are ready for sale in selected U.S. markets. Both cars have a long list of standard equipment. The coupe packs a 123-horsepower engine.

GM unveils its Japan-fighter

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

SPRING HILL, Tenn. — After $3 billion and eight years of planning, Saturn is ready to battle Japan Inc.

The fight begins this month.

The all-important pricing decisions have not been made public yet for the new General Motors line. But the product itself — a roomy but simple, small car that at least matches its entrenched Japanese competitors technology for technology — proves that the long-awaited Saturn is preparing for a market-share battle.

To start the fight, the car contains 54 patented or patent-pending inventions, ranging from electronic transmission controls to window regulators that can lower curved door glass. Other features, like injection-cast all-aluminum engines and recyclable plastic body panels, were not patentable, but they still set the car a pace apart from much of the industry.

Many of its innovations came via Saturn's close supplier relationships, directly inspired by the Japanese tradition of simultaneous product engineering between carmaker and supplier. Several of Saturn's suppliers and sub-suppliers, in fact, are Japanese parts makers with U.S. factories.

As GM's first small-engine subcompact since the 1976 Chevette,

PARIS

Protectionist politics could overshadow new products

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — European automakers promise to have several hot novelty products on display at the Paris Auto Show this week, but the salon's real sizzle could come from an increasingly bitter debate here over Japanese access to Europe's car market after 1992.

Paris is at the center of mounting industry and political opposition to a European Commission initiative to ease restraints on Japanese imports after 1992, when the 12 European Community countries are scheduled to dismantle all internal trade barriers.

The commission, which is the European Community's executive arm, and Tokyo are understood to have agreed in principle to limit Japanese imports to 14.5 percent of the new-car market by 1997, up from just under 11 percent today.

Reportedly, the accord also would cap Japanese transplant production in Europe at 1.5 million cars annually, up from fewer than 100,000 currently.

But with Europe's carmakers

GM, UAW attack health care costs

Compromise in new pact could save maker $400 million a year

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

General Motors has won contract concessions from the UAW that could save the company more than $400 million in annual health care costs.

The compromise with the union could lead to cost penalties for GM workers who choose not to enroll in a managed care network and is expected to save GM 10 percent to 15 percent of its annual health care bill, which totaled $2.9 billion last year.

A letter signed by Alfred Warren, GM industrial relations vice president and chief negotiator, and approved by UAW Vice President Steve Yokich and attached to Exhibit C of the contract commits the union to attacking health care costs. The letter says a joint committee of union and GM representatives will look at ways to reduce company costs and modify the health care plan not later than July 1, 1991.

The letter specifically targets retiree health care costs and cites as one area of study "an approach limiting corporate contributions, similar to the approach taken by AT&T to address rising retiree health care costs."

Neither GM nor the union would comment on the letter last week prior to contract ratification, but the Communication Workers of America union, which represents AT&T employees, adopted two plans in its 1989 agreement that likely will cut health care costs.

One AT&T plan applies to active workers only and may be extended to retirees by 1992, said company spokeswoman Maureen Lynch.

Under the plan, sometimes described as the largest managed U.S. care network, active nonmanagement AT&T employees can select health care services within the network or pay higher costs to go outside the system.

The second AT&T plan takes effect July 1, 1995, and applies only to employees who retire after March 1, 1990. The company will pay a maximum of $2,650 for

CHRYSLER IN THE '90s:

3 new car platforms slated to replace the aging K; targets are 1993-95; minivan, truck changes due

Third in a series.

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Beleaguered Chrysler Corp. — which watched sales and profits tumble in the late 1980s while failing to develop a single new domestic car — will replace virtually every one of its domestic cars within four years.

The problem for Chrysler and its dealers will be to stay financially healthy until the vehicles roll into showrooms.

Chrysler admits it is overly dependent on trucks — specifically minivans and Jeeps. But the company insists that its car market share will improve with upcoming products.

Despite reduced corporate earnings and a two-year, $2.5 billion cost-cutting plan, company executives say Chrysler's future product plan is sacrosanct.

The plan will be the heart of Chrysler's

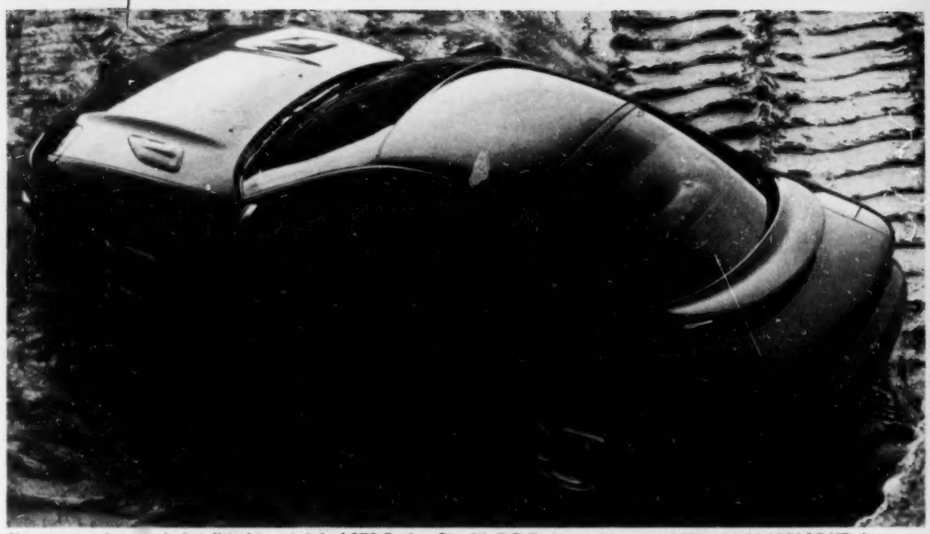
Transaxle troubles hit early Stealth, 3000GT turbo cars



New transaxles are being fitted to a total of 270 Dodge Stealth R/T Turbos, above, and Mitsubishi 3000GT VR-4s.

By Mary Connelly and Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTERS

Two 1991 flagship models — the Mitsubishi 3000GT VR-4 and Dodge Stealth R/T Turbo — will not reach dealer showrooms until mid-October because workers at ports in California and Florida are replacing the cars' five-speed manual transaxles.

Non-turbo versions of the new Japanese-built sports coupes, jointly developed by Mitsubishi Motors Corp. and Chrysler Corp., are not affected, and cars are already being delivered.

West German transmission supplier Getrag GmbH & Cie. began air-freighting new transaxles to the United States after engineers determined that an estimated 10 percent of the initial 270 turbo versions built could be defective because of incorrect machining calibrations. Tooling has been adjusted so that models assembled after the initial run are not affected.

Mitsubishi engineers apparently detected the trouble in a pre-production model that tended to grind in third gear.

"They discovered that there had been a mis-machining. Something had gone wrong during the delicate process of putting that one transmission together," said Leo Hayes, director of product engineering at Mitsubishi Motor Sales of America Inc. in the United States.

Hayes said engineers determined that the transaxle's synchronizer was not calibrated correctly.

Mitsubishi Motor Sales of America confirmed that 130 Mitsubishi 3000GT VR-4 models are involved, and Dodge confirmed that 140 Dodge Stealth R/T Turbo units are being replaced.

"The problem was experienced in pre-production vehicles," the Dodge spokesman said. "So we went back to Getrag and had it fixed. We caught everything before any vehicles reached showrooms."

The 3000GT VR-4, priced at $31,000, is Mitsubishi's lead image model.

Similarly, the $29,600 Stealth R/T Turbo is the flagship model of the Dodge division. The 1991 Indianapolis 500 pace car is based on the Stealth R/T Turbo. Dodge expects to sell 18,000 Stealth units in the 1991 model year, about 20 percent of them R/T Turbo models.

GM nixes counting program cars in dealers' new-car sales

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ray Green called unfair a General Motors decision against crediting the sale of a program car as a new-car sale when evaluating its dealers.

"It could give us a chance to test the dispute resolution clause in the new GM franchise agreement if a dealer is terminated for ineffective new-car sales," warns Green, president of the National Automobile Dealers Association.

Though not a sink-or-swim issue with the association, program or buyback cars pose a thorny problem.

An industry enigma, program cars fall somewhere between a new car and a used car. Essentially, they are vehicles sold to daily rental companies then repurchased by the manufacturers and sold a second time to franchised dealers through auto auctions.

Generally, program cars spend only a few months in daily rental fleets. Hence, they arrive on dealers' lots almost brand new, with low mileage and extra clean. Dealers like buy-back vehicles because retail profit margins are higher than on new cars.

But they argue that program cars steal from new-car sales. And dealers are evaluated on how many new cars they sell — among other things like customer satisfaction — and not how many program cars they sell.

NADA asserts that program cars should be taken into consideration when manufacturers evaluate a dealer's new-car sales performance — a factor if a manufacturer wants to terminate a dealer.

"We know that these new, low mileage vehicles take away from new-car sales," said Green. "Program cars should be factored into the formula if a dealer's performance is evaluated as not effective because of progam cars."

GM had said it was studying whether to credit program car sales as new-car sales at the behest of dealers. But Bob Ogden, GM director of sales and dealer operations, said last week the company decided against it.

Ogden said mixing new-car sales with used-car sales would muddle how the company and others track new-car sales and registrations. He further contends that sales evaluation is a part of the company's contract with its dealers, and the company is reluctant to change it.

AUTOMOTIVE NEWS/JOE WILSSENS

NADA President Ray Green wants program cars counted as new-car sales.

Green says he won't give up. "It is still being discussed by NADA line groups and dealer councils," he says. "I will go back and talk to them (GM) about it."

Volvo cuts Ahlstrom's duties; Ahlstrom cuts out

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Bjorn Ahlstrom, the president and chief executive officer of Volvo North America Corp. for 18 years, resigned last week because the Swedish parent company had cut his responsibilities.

AB Volvo is breaking up its overseas subsidiaries, including Volvo North America Corp., to make it easier to carry out Volvo's alliance with French manufacturer Regie Nationale des Usines Renault, Ahlstrom said.

"It's fairly easy to understand that the guy who's been running all this for 18 years is not exactly excited about having his responsibilities cut by two-thirds," the 56-year-old native of Sweden said.

Ahlstrom's resignation officially takes effect Dec. 31. His successor is Albert R. Dowden, 48, who was executive vice president under Ahlstrom and will take over Ahlstrom's duties as president and CEO today. Dowden will not assume Ahlstrom's title as chairman of Volvo Cars of North America.

The restructuring also gives Joseph L. Nicolato, president of Volvo Cars of North America, direct reporting responsibility to Volvo Car Corp. in Sweden. Even before Volvo had a partner, Nicolato had favored a more direct link with Sweden instead of reporting through Volvo North America Corp.

Volvo's Bjorn Ahlstrom: "Our cars . . . last forever. But I didn't."

"We now have one boss," said Robert C. Austin, spokesman for Volvo Cars of North America.

Nicolato will report to Lennart Jeansson, the president of Volvo Car Corp., who replaced Roger Holtback earlier this month after Holtback resigned. Jeansson will be chairman of Volvo Cars of North America, Ahlstrom said.

Similarly, the presidents of Volvo GM Heavy Truck Corp. and Volvo Penta of America marine engines report to the presidents of their respective units in Sweden.

Volvo and Renault are swapping minority shares in their car and truck subsidiaries. Ahlstrom said that couldn't be done under the existing structure, where all North American activities report to him.

The car and truck subsidiaries, which make up the lion's share of Volvo's business, have to be broken off so they can participate in the Renault deal, Ahlstrom said.

Currently, Volvo North America Corp. includes Volvo Cars of North America in Rockleigh, N.J.; Volvo GM Heavy Truck Corp. in Virginia, Utah and Ohio; Volvo Penta of America marine engines in Virginia; Volvo Finance North America Inc. in New Jersey; several Canadian subsidiaries, including an assembly plant in Nova Scotia, and other subsidiaries.

"There will be no Volvo North America any more, not like it is now. Instead of one, there will be five or six companies in North America," Ahlstrom said.

Following last Friday's announcement, Ahlstrom sounded upbeat on the phone and said he had been ready "to do other things."

"I love our cars; they last forever. But I didn't," he joked.

Ahlstrom said he simply couldn't accept the reduced responsibilities. "As a consequence, I resigned. It was mutually agreed and very friendly. That's not bullshit; I mean that. I love this company," Ahlstrom said.

In a television interview on Cable News Network last week, after he probably already knew of the impending changes, Ahlstrom said he was envious of "entrepreneurs who are immensely rich and can tell the world to go to hell if it

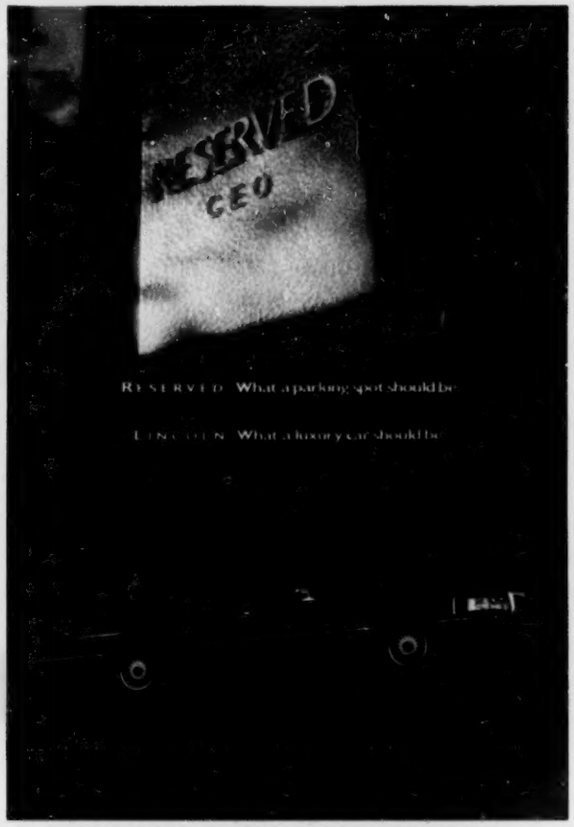
Crate appointed international editor

James R. Crate has been appointed international editor of *Automotive News*. He is based in Detroit and will plan and coordinate the newspaper's overseas coverage and supervise the paper's network of foreign correspondents and stringers.

Crate, 48, brings an extensive background in business and financial journalism to the position. His experience includes five years with *The International Herald Tribune* in Paris, where he was business and finance editor; four years as an editor on the business desk of *The New York Times*; and 3½ years as assistant business editor of *The Miami Herald*.

Crate

He has also worked for *The Ottawa* (Ontario) *Journal* and *The European Stars & Stripes*, the daily newspaper for GIs and their family members based in Europe and the Middle East.



Lincoln-Mercury hopes to stike gold with its '91 ad campaign.

Info-tainment ads

Familiar themes and a dash of humor mark Lincoln-Mercury's '91 campaign

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Lincoln-Mercury believes television commercials should be entertaining and informative.

That's why the division enlisted the assistance of dogs, cats, golf great Jack Nicklaus and even a Concorde jet to help launch its 1991 advertising campaign.

The campaign, which began last week with Tracer, features new themes in some ads and familiar themes with informative and/or humorous executions in others.

The 1991 Tracer ads carry the new themeline "Built to change your mind." One 30-second spot features a young woman executive climbing into her Tracer. She talks about the changes in her life and says she never thought she would drive anything built by an American car company.

The spot ends with "Built to change your mind" and the familiar Mercury cat running through the word "Mercury."

Stephen G. Lyons, L-M advertising manager, said Tracer's new theme is designed to challenge "traditional thinking" about small domestic cars in general and Tracer in particular.

The Tracer ads are aimed at young buyers who might be inclined to buy small Japanese cars. Lyons acknowledged that the yet-to-go-on-sale Saturn is also a potential Tracer competitor.

The new Lincoln ads are a continuation of the division's "icon" campaign that started three years ago.

One Lincoln Continental commercial cuts back and forth between shots of the speeding car and the speeding Concorde jet. The voice-over says: "1991 Lincoln Continental. It is to an everyday car what the Concorde is to everyday planes." The spot ends with the familiar "Lincoln. What a luxury car should be."

Also, Nicklaus continues as Lincoln spokesman.

On the humorous side is a Cougar commercial in which several dogs react nervously to the car as if it were a cat. As the car races past the dogs, the voice-over notes that "the new top dog is now a cat."

> **The Tracer ads are aimed at young car buyers who might be inclined to buy small Japanese cars.**

The spot concludes with the eight-year-old "Nothing moves you like a Mercury."

Commercials for other Mercury models start airing this month.

Mercury print ads appear in October issues of several magazines. Some Lincoln ads will be shown this fall, but most will be held until the 1991 professional golf season begins early next year.

L-M's campaign also includes television and print ads directed to the Afro-American and Hispanic markets.

Big 3 and eight importers fail to meet '90 car CAFE standard

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3's "domestic" cars failed to meet the corporate average fuel economy standard of 27.5 mpg for the 1990 model year.

Chrysler Corp. and General Motors had a domestic passenger car CAFE of 27.1 mpg, and Ford's CAFE rating was 26.4 mpg.

Under federal rules, cars with more than 75 percent North American content are classified as "domestic." The rest are classified as "imports." Each of the Big 3 exceeded the 27.5 mpg mandate for their "imports" by more than 2 mpg.

Eight import automakers did not meet the standard: BMW, Ferrari, Maserati, Mercedes-Benz, Peugeot, Porsche, Sterling and Volvo.

The National Highway Traffic Safety Administration hasn't yet figured the fines owed for the 1990 violations. Companies that don't achieve the standard can apply credits earned in previous years when they exceeded the requirement.

NHTSA assesses $5 for each tenth of a mpg which the manufacturer's CAFE level falls short of the standard. That figure is then multiplied by the total number of cars produced by the manufacturer in that model year.

Since 1983, the federal government has collected $164 million in CAFE fines. Five companies paid penalties for the 1989 model year ranging from Peugeot Motors of America Inc's. $487,800 to Mercedes-Benz of North America Inc.'s $20.4 million.

GM also failed to meet the two-wheel-drive truck CAFE of 20.5 mpg with its fleet rating of 20.2 mpg.

A fourth domestic manufacturer, Callaway Cars Inc., which produces a souped up Corvette, also failed to meet the CAFE, with a rating of 19.5 mpg.

Geo heads mileage race

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — For the fifth straight year, the car that is now the Geo Metro is the most fuel efficient new car sold in the United States.

The Metro XFI, engineered by Suzuki and sold by General Motors, is rated at 53 mpg city and 58 mpg highway driving, the EPA said last week in releasing its 1991 model-year fuel economy estimates.

The 1.0-liter three-cylinder Metro, classified as a subcompact, weighs 1,875 pounds. It won its early fuel-economy crowns as the Chevrolet Sprint.

The Lamborghini Diablo, a fire-breathing Italian import to be introduced in late fall for about $200,000, received the lowest fuel economy rating at 9 mpg city and 14 mpg highway. The 5.7-liter V-12 Diablo is classified as a two-seater. Its predecessor, the Countach, was the thirstiest car last year.

EPA said fuel economy varies widely within each of the nine classes. In the compact car category, fuel efficiency ranges from 37 city/43 highway for the Volkswagen Jetta diesel to the BMW M5's 11 city/20 highway.

To arrive at the fuel economy figures, EPA tests pre-production models on a dynamometer that resembles a treadmill. The test also yields emissions readings.

Fuel economy ratings must be displayed on window stickers of all new cars in dealer showrooms. New vehicles that get less than 22.5 mpg are assessed a gas-guzzler tax, beginning at $500.

Coming soon: Japan's leaner methods

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — If you think the Japanese are tough now, you haven't seen anything yet, according to a Massachusetts Institute of Technology research team.

So-called "lean production" is coming to America, and profound change is in the wind for U.S. auto dealers, an MIT study says.

MIT identifies the Japanese manufacturers, especially Toyota Motor Corp., as the best practitioners of lean production, but the study emphasizes that anyone can adapt the techniques.

Some aspects of lean production — low inventories and just-in-time delivery, for instance — have already taken root in America. MIT gives Ford Motor Co. high marks for learning some lean production techniques from Mazda Motor Corp.

But most changes have been confined to the factory, even at the Japanese transplant companies, although the concept includes much more than the factory. The Japanese haven't perfected lean production yet, and they haven't exported the entire system to America.

When they do, "the Western mass producers may be in for a final surprise before the end of the 1990s," the study says.

Compared to "mass production" — read Big 3 and European methods — lean production can build a much greater variety of higher-quality cars with half as much effort, in half the time, in half the space and with a fraction of the inventory, the study says.

The study is summarized in *The Machine That Changed the World* (Rawson Associates, $22.50), a new book based on a five-year, $5 million study of the world auto industry.

The study coins the term "lean production," but the emphasis is on "lean," rather than "production" because much more than the factory is involved.

Lean production embraces the entire business, including product development, model mix and model lifetimes, suppliers, factories, dealers and customers, with the elements feeding information to each other.

In lean production, customer preferences are the No. 1 consideration. In mass production, the factory comes first, and the customer and the dealer come last, the MIT team says.

For instance, Japanese salesmen call on their customers at home. They poll their customers to learn what kind of cars they like and when they might be in the market. All that information is passed along to the manufacturer, which uses the data to develop new cars.

In the West, little information flows from customer to dealer to manufacturer, the authors say. Manufacturers are more likely to build cars people won't want.

In turn, those cars may have to be discounted and/or forced on dealers, which costs money and/or alienates the dealers. Custom-ordering is not encouraged, and it takes much longer if it's attempted. And a customer is more likely to end up with a car that is not precisely what he or she wanted.

In Japan, dealers and the manufacturers develop a personal, long-term relationship with each other and with their customers, and they don't simply wait for customers to walk in the door.

"The automotive retailing system is the final element of the lean production system, and without that, the rest of the elements don't make sense," says Daniel T. Jones, a professor at the Cardiff Business School in England and a co-author of the book.

Glaval cuts basic package price

Range of offerings, marketing also changed for 1991 vehicles

By Joseph Bohn
TRUCK EDITOR

Glaval Inc. of Elkhart, Ind., has cut the price of its basic van conversion package in response to the tougher 1991 model-year market and simplified its range of equipment packages for dealer ordering.

The company also adopted a new marketing approach for its van conversions that emphasizes separate brand names for each chassis on which it builds.

Glaval is targeting 25,000 van conversion sales in the 1991 model year after wholesaling 16,370 in the 1990 season.

William T. Becker, Glaval vice president of marketing, advertising and consumer relations, said dealer orders for 1991 models totaled 1,320 units through mid-September, up about 34 percent from last year.

Since the overall market is down, dealers appear to be more selective in ordering conversion units from fewer companies, Becker said.

Glaval, the industry's second largest converter, is picking up business from competitors that have fallen on hard times.

The company has a new standard value conversion package with a dealer wholesale price of $2,691, down from $3,495 last year for its lowest-priced package.

The new package has just about all the features of the old one, Becker said, except for an overhead television, which is available in one of its optional equipment packages.

Glaval has a similar package on compact Chevrolet Astro and GMC Safari minivans with a wholesale price of $2,895. It includes some features, such as fiberglass running boards, that the full-sized van package does not have.

Glaval dropped its various conversion models, replacing them with simpler-to-order packages that give dealers more pricing latitude.

It now has nine "quick-spec" value packages as optional add-ons to the basic conversion package. They range from $295 to $1,995 at dealer cost.

Along with letting dealers choose their product/price points, Glaval is also promoting separate brands for each chassis on which it builds.

In doing so, it dropped the Glaval name from all its chassis and promotional literature.

All its Chevrolet conversions now emphasize the Gladiator name; all Ford conversions, the Universal name; all GMC, the Auto Form name; and all Dodge, the Primetime name.

Becker said the separate brand approach is designed to support dealers by eliminating the opportunity for customers to comparison-shop. There won't be different-make dealers across the street or around the corner from each other selling the same Glaval-branded conversion units, Becker said.

Major competitors like Mark III Industries of Ocala, Fla., and Starcraft Corp. of Goshen, Ind., use the same company name on their conversions.

Becker said the separate brand approach also reduces some of the confusion in consumers' minds, and lends more credibility to dealers' sales efforts.

It does not give Glaval a great deal of consumer awareness, since most buyers aren't as familiar with an Auto Form or Primetime conversion as they would be with a Glaval.

But Becker said that is what his dealers wanted, and they are the real key to retailing his products.

Glaval is supporting the new brand efforts with point-of-purchase merchandising displays for dealers, product literature and other merchandising aids.

It has created sleek car-type product posters for dealership displays and retail event giveaways and a series of hang tags for its vans, as well as consumer information brochures, like *Taking the Mystery Out of Shopping for a Van Conversion*, which it updated.

Fiberglass spare tire discs on the back of the company's conversion vans also feature the original-equipment brand logo and the Glaval brand, such as Gladiator.

For 1991, the company also stopped producing its own commercials for dealers. It is supplying them with video footage that they can use in working with local ad agencies or television stations, Becker said.

Chevy officials say truck sales will rise, RV sales won't

By Joseph Bohn
TRUCK EDITOR

DETROIT — Chevrolet officials are still bullish about increasing their 1991-model truck sales, though they're not quite as optimistic about RVs.

J.C. Perkins, Chevrolet general manager, said he expects to sell about 1.4 million trucks in the 1991 model year, up from about 1,275,000 in 1990. Perkins spoke at a 1991-model press preview here.

The forecast is based on a number of product/marketing actions.

Chevrolet expects to get a lift in full-sized C/K pickups from increased production of extended-cab models, according to Frank F. Raine Jr., Chevrolet marketing manager, trucks.

The division has been short of extended-cab models, which are particularly popular in the 6.5-foot "short-box" pickup models.

Raine expects extended-cab models to account for "30 percent or better" of full-sized C/K pickup sales in the 1991 model year, up from a current 25 to 26 percent.

In the 1991 model year, Chevrolet officials also plan to expand availability of the Sportside models that were available only on short-wheelbase C/K models.

Ford Division doesn't have a pickup body style similar to the Sportside, though its dealers have been pressing the company for one.

Altogether, Chevrolet expects to sell about about 30,000 more C/Ks in the 1991 model year than its estimated 456,000 sales for the 1990 model year.

The S-Blazer is also expected to get a lift from increased availability and stronger marketing support behind the four-door model. Sales are expected to increase by about 30,000 in the 1991 model year over the estimated 155,000 for 1990.

Officials plan stronger support for the S-10 pickup, which has more attractively priced and equipped option packages for 1991.

Chevrolet anticipates selling about 225,000 S-10s compared to about 210,000 for the 1990 model year.

The division is looking for a 20 percent lift in Geo Tracker sales to about 35,000 in 1991, based on the availability of a new, less expensive two-wheel-drive model.

Chevrolet anticipates some decline in sales of its full-sized Suburbans and G-vans.

"We're beginning to see a little softness on the part of the RV manufacturers who are not necessarily ready to take a big allocation for conversion vans," said Perkins.

Events in the Middle East "caused us to rethink the RV piece of it (sales)," added Raine.

Still, Chevrolet officials are looking for a rebound in that market by early 1991 if there is no disruption in the oil supply.

Ford officials have a similar viewpoint.

They expect the industry to start the 1991 model year off softly and improve gradually.

Ford sold about 152,000 full-sized Econoline vans in the 1990 model year, about 25 percent of which were converted.

Thomas J. Wagner, Ford Division general manager, declined to provide an Econoline sales projection for 1991 at a new-model press preview.

Ford's outlook is partially complicated by the fact that it is introducing an all-new Econoline/Club Wagon series next year, which involves a protracted changeover.

Van chassis suppliers such as Ford and Chevrolet had good orders for their conversion chassis in June and July when the market outlook was still good.

As a result, they overproduced chassis very early in the 1991 model run and are expected to make some production adjustments during the next two months.

At Chevrolet, officials are looking for about 105,000 full-sized G-van sales in the 1991 model year, down from an estimated 110,000 in 1990. About 60 percent of the 1990 models were conversion chassis shipped to the RV market.

RV BRIEFS

Harley folds Aviator

WAKARUSA, Ind. — Holiday Rambler Corp. laid off 180 of its 1,800 employees and phased out its Aviator Van Conversions operation. Holiday Rambler, a major Ford pool account, also closed its Utilimaster Corp.'s manufacturing plant in Woodland, Calif.

H. Wayne Dahl, president and chief operating officer of Holiday Rambler, said sales of Aviator and the Utilimaster operations in California dropped to $1.6 million in the first half of this year, down from $8 million a year earlier.

Holiday Rambler's RV sales have dropped as much as 50 percent in recent weeks, according to Richard Teerlink, president and chief executive officer of Harley-Davidson Inc., Milwaukee, Holiday Rambler's parent company.

Ford increases discount

DEARBORN, Mich. — Ford Motor Co. increased the discount on its RV converter package for E-150 van conversion chassis to $1,500. It had been offering free air conditioning, worth $970.

RV converter packages on the E-150 have a manufacturer's suggested retail price of $2,677 for the regular van and $2,510 for the Super Van. Their discounted net prices drop to $1,177 and $1,010.

Converter packages on the E-250 and E-350 van chassis, which have a retail price of $2,050, carry $1,000 discounts, bringing their bottom-line price to $1,050.

Tread Lightly expands

OGDEN, Utah — Tread Lightly, a program designed to educate operators of off-highway vehicles about land protection, is in the final stages of incorporation as a non-profit organization.

Tread Lightly has been under the auspices of the U.S. Forest Service and U.S. Bureau of Land Management for the past two years.

Coachmen introduces Orion touring vehicle

Coachmen Industries of Elkhart, Ind., has a new Orion luxury touring vehicle. It has Ford Motor Co.'s 351-cubic-inch fuel-injected V-8, front-wheel drive and four-wheel independent suspension. The hood flips forward for easy accessibility. Windows are extra-large and tinted, and the overall height of the vehicle is just under eight feet. Interior height is 6 feet 1 inch. The Orion has a three-year/36,000-mile powertrain warranty and a service network of 700 Ford Power Products dealers. Its suggested retail base price is slightly under $50,000.

TV spending on auto ads rises 8%

GM and Chrysler post gains for 1st half; but dealer outlays dip

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Television ad spending by automakers, dealers and dealer associations rose 8 percent to $1.5 billion in the first six months of 1990, according to the Television Bureau of Advertising.

Adjusted for television advertising rate increases, the real year-to-year growth in television automotive advertising in the first half was just 2 percent, said Rodney Nevocat, project director and media analyst at McCann-Erickson in New York.

General Motors retained its position as the leading automotive television advertiser with $433.8 million in total ad expenditures, a 7 percent increase over the first half of 1989.

The figures include all spending for network, spot and dealer association advertising.

Second place went to Ford Motor Co., although its television ad spending declined 7 percent to $198.1 million.

Ford did not respond to requests for an explanation.

Chrysler Corp., held on to the No. 3 spot as it increased first-half television ad spending 9 percent to $188.5 million.

"Network automotive revenues are up because some factories boosted corporate campaigns, recognizing the importance of protecting market share with continued television advertising weight," said Jim Joyella, Television Bureau of Advertising president.

"Dealers, on the other hand, fund their advertising through co-op plans with the factories, based on number of cars sold. When sales are down, as they are now, the advertising dollars are simply not there. The decline in spot revenues is a direct reflection of a down auto market."

Atlanta Toyota, which came in first by spending $1.5 million, was down 33 percent from the same period last year. Cal Worthington of Sacramento, Calif., was second, spending $1.2 million, 20 percent more than it spent last year.

Mid-month sales drop 5% despite transplant strength

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Strong sales by transplant automakers helped limit the Sept. 11-20 sales decline to 5.7 percent from last year.

Each of the Big 3 reported lower sales as 320,505 cars and light trucks were delivered during the period. Car sales totaled 204,675, a 2.7 percent drop; truck sales were 115,830, a dip of 10.6 percent.

The mid-September period had nine selling days each year.

Cars and truck sales were down across the board for General Motors, Ford Motor Co. and Chrysler Corp.

Ford Escort picked up steam for the second straight 10-day period while sales of its cross-town rival, Chevrolet's Geo Prizm, declined from a year ago for the second straight period.

Their performances were mirror images — Escort up 11.25 percent; Prizm down 11.25 percent.

The Lincoln models, Ford Crown Victoria and Mercury Grand Marquis joined Escort in the "up" column, but all other Ford Motor Co. nameplates posted declines. Ford's overall vehicle sales fell 7.8 percent — 7.7 percent for cars and 7.9 percent for trucks.

Despite fewer Prizm sales, Chevrolet reported higher car sales for the period, the only GM division to do so. Chevrolet sold 3,536 more cars than it did a year ago with gains for every nameplate except Prizm, Corsica/Beretta and Corvette. Corvette sales were off 64.13 percent.

GM's overall sales slid 10 percent with cars down 6.4 percent and trucks off 16.3 percent.

Chrysler's truck sales, long its strength, were down 18.5 percent, and its car sales fell 12.1 percent for a combined-vehicle sales decline of 15.1 percent.

For the transplants, Nissan was the winner with an increase of 137.8 percent in car-truck deliveries.

Robert Peltier, owner of Robert Peltier Nissan/Pontiac in Tyler, Texas, attributed the increase to more inventory this year. "No dealers had inventory at this time last year because of a Pot of Gold incentive program that ended in August," he said.

Honda was up 21.1 percent in sales of U.S.-built cars; Mazda was up 134.7 percent; and Toyota was up 52.8 percent. Mitsubishi reported a 6.8 percent decline.

PARIS

FROM PAGE 1

facing plateauing or declining sales, many industry and political leaders have accused the commission of giving away all of the European market's forecast growth.

France's Peugeot and Renault, which have led opposition to the EC's position, apparently have been successful in converting much of the industry to a protectionist point of view. Indeed, West Germany's Daimler-Benz, a major exporter to Japan, is reported to be the only European manufacturer now solidly in favor of unrestricted access for Japanese carmakers.

The biennial Salon de Paris offers a tempting platform to air such issues in a dramatic forum. From press-conference pulpits this week, the industry's leading protectionist voices — Peugeot S.A. Chairman Jacques Calvet and Renault S.A. Chairman Raymond Levy — are expected to raise the political debate to a fever pitch.

The salon also could offer a setting for the announcement of any results from recent talks between Chrysler Corp. and Fiat S.p.A. At the 1988 Paris show, the two companies finalized a deal for distribution of Fiat's Alfa Romeo 164 through Chrysler dealers in the United States.

Among those scheduled to hold press conferences in Paris this week is Chrysler Chairman Lee Iacocca.

On the product side, French carmakers have enough in the pipeline to turn Paris into a new-car extravaganza — but they won't.

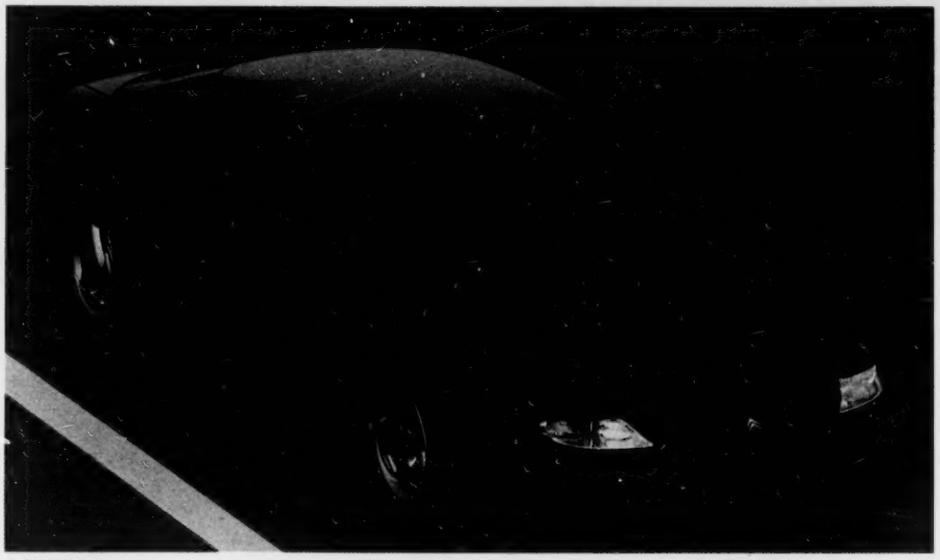
Renault has a heavily revised Espace minivan and a new Alpine sports car in the works, but neither will be seen at Paris, according to the company's sales and marketing chief, Paul Percie du Sert.

In line with a Levy decree that new products be shown only when they are ready for showrooms, the new Espace will be shown at the Geneva show next March, he said.

Citroen's forthcoming lower-medium-class entry, code-named N2 and likely to be called either the FX or ZX, had been expected at Paris. But in a recent interview, Citroen's chief executive, Xavier Karcher, said the new car will not be shown before the first quarter of next year.

Instead, Renault and Citroen will roll out concept cars.

Citroen, a Peugeot unit, will show the Activa 2, a four-seat coupe that could form the basis of a future production model to compete in the upper-range coupe segment typified by the BMW 850i.



ACTIVA 2

Citroen's four-seat, two-door concept coupe could one day compete with cars like the BMW 850i, but there are no plans to build it. Designed by Peugeot S.A.'s Group Technical Directorate, it is powered by a 3.0-liter V-6 engine developing 200 horsepower.

But Karcher said there are no current plans to build it.

Designed by Peugeot S.A.'s Group Technical Directorate, the Activa 2 is the successor to the original Activa displayed at the 1988 Paris show.

Power comes from a 3.0-liter, 24-valve V-6 engine that develops 200 horsepower. It is equipped with Citroen's hydractive suspension and includes an electrohydraulic height corrector to maintain a constant ride height.

In addition, the Activa suspension raises itself when the doors are opened at rest to facilitate passenger exit and entry.

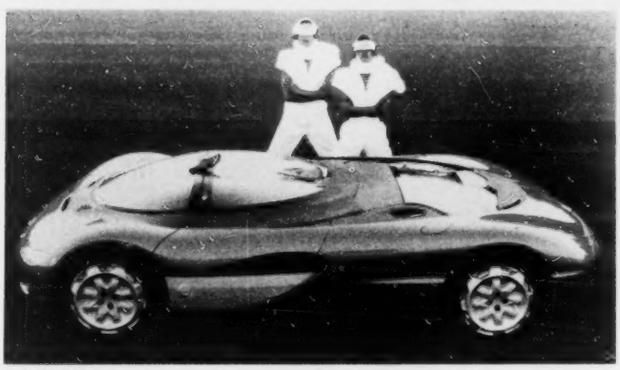
Renault will show the Laguna, a two-seat sports-car prototype powered by a mid-mounted, 2.0-liter turbocharged engine from the Renault 21 2L Turbo that delivers 210 hp.

The rear-driven car reaches a top speed of more than 155 mph.

The Laguna has a sliding tonneau cover instead of a conventional top, semi-automatic gullwing doors and concealed roll hoops located behind the driver and passenger that raise automatically when the car rolls over.

Renault engineers slashed weight by extensive use of composite materials such as Kevlar and carbon fiber.

A new Mercedes, the 500E, could be the show's biggest attention-grabber. The 326-hp car, powered by a 32-valve V-8 from the Mercedes SL, will serve as a new range-topper for the mid-sized W124 line and will go on sale next spring.



LAGUNA

Renault's two-seat sports car prototype is powered by a mid-mounted, 2.0-liter turbocharged engine producing 210 horsepower.

Now in pilot production at Porsche AG's plant in Zuffenhausen, Germany, the 500E was reworked by Porsche's Weissach Technical Center to accommodate the new powerplant.

The price in Germany is expected to be about 130,000 marks ($84,000).

Volkswagen AG's Spanish subsidiary, Seat, will show the Proto C, a concept vehicle by ItalDesign's Giorgetto Giugiaro that anticipates the Seat Ibiza supermini of the future. But Seat apparently will not show the Giugiaro-designed Toledo compact sedan at Paris. That model is expected to go on sale early next year.

A prototype of the Ferrari Mondial T with the Valeo Electronic Clutch — which doesn't require a clutch pedal — will be displayed on the Valeo stand. The special Mondial, destined for the U.S. market only, is still six months away from production.

Mitsubishi will show the Sigma, a sister version of the new upmarket Diamante sedan. The Sigma will begin reaching some European markets late this year.

Citroen sets intro of N2 for early '91

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — Automobiles Citroen will make its long-awaited entry into Europe's crowded, but crucial, lower-medium segment early next year.

Xavier Karcher, chief executive of the Peugeot S.A. unit, confirmed that the all-new model, known internally as the N2, will debut during the first quarter of 1991.

The vehicle will be among the most significant new-car launches in Europe during 1991 because it will place Citroen in a segment in which it does not now compete. As such, it is central to parent Peugeot's declared aim of capturing first place in the European sales rankings in the early 1990s.

Peugeot S.A., which includes the Peugeot and Citroen brands, is now third in European car sales behind the Volkswagen and Fiat groups and commands a market share of just under 13 percent.

Citroen's penetration in 17 West European countries last year was 4.7 percent on sales of about 450,000 cars, while Peugeot achieved 8.1 percent.

Karcher said Citroen has risen to 4.9 percent so far this year, but is still short of target.

"We have not reached the goal that we set for ourselves," he said. "We would have liked 5.3-5.4 percent."

Karcher blamed the failure on disappointing results in France, where Citroen's share has been about 12 percent during the last three years, and in Italy, where penetration has declined this year.

Karcher said the N2 will be positioned between its AX supermini and BX compact models in a segment that accounts for about four million sales annually, almost a third of the total West European market.

The segment is Europe's biggest, but it is also becoming the most competitive. Ford recently introduced an all-new Escort/Orion; VW will replace the Golf, the best-selling car in Europe, next year; and General Motors will bring out a successor to the Opel Kadett — last year's second best-selling model.

The front-wheel-drive N2 is believed to share a platform with the successor to the Peugeot 309.

Mercedes is top brand with world consumers, survey finds

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Mercedes-Benz is the "most powerful" automotive brand in the world, followed by Toyota, Rolls-Royce, Honda and Ford, according to a survey of consumers in Japan, Europe and the United States.

"Most powerful" means the most recognized and most respected.

The same survey indicates that while U.S. consumers are more familiar with domestic automobile names than import names, they do not have especially high regard for domestic vehicles.

The survey was conducted by Landor Associates, a New York-based identity management and design consulting firm. Its findings are based on interviews with 5,000 consumers in the United States, 1,500 in Japan and 3,500 in Europe. The survey was conducted during the spring and summer of 1990.

Landor uses the survey results to help its clients better understand and use the power of their corporate and consumer brands. Landor provides corporate identity, brand identity and packaging and retail identity services for its clients.

The participants were asked to rate their "share of mind" or awareness of 4,000 leading brand names as well as their "esteem" or how they regard those brands. No consumer ranked more than 800 brands.

By combining the two rankings, Landor arrived at its ImagePower ratings, which measure the "power" of a specific brand.

The "most powerful" brand name in the world, according to the survey, is Coca-Cola, followed by Sony and Mercedes-Benz. Mercedes-Benz ranks 12th in awareness and second in esteem.

The survey lists the top 300 brand names in the United States, the top 300 in Europe and the top 300 in Japan. Each geographic area's findings are ranked from 1 to 300 in terms of ImagePower, awareness and esteem.

In the survey of U.S. consumers, Chevrolet is the "most powerful" automotive name. It ranks seventh in awareness, but it is 107th in esteem. General Motors is the second "most powerful" automotive name. It is 13th in awareness and 116th in esteem. The third "most powerful" automotive name in the United States is Ford, according to the survey, followed by Toyota, Mercedes-Benz, Honda, Oldsmobile, Dodge, Cadillac and Buick.

European consumers generally rate both Japanese and American automotive brands higher in awareness than esteem while Japanese consumers rate European brands higher in esteem than awareness.

Japanese consumers named only two American automobile brands — Cadillac and Ford — in their survey. Both rated higher in esteem than in awareness.

"European and Japanese auto manufacturers have especially strong positions in the United States relative to their ImagePower rankings," said John Hudson, director of marketing at Landor. "This suggests that U.S. automakers ought to be concerned about the comparatively low esteem consumers have for their products."

WORLD'S MOST POWERFUL CAR BRANDS

New rebates for GM and Ford as model year opens

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. and General Motors marked the official public introduction of their 1991 vehicles by revising the consumer cash incentive programs on those models.

In Ford's new program, which runs through Dec. 11, rebates on some 1991 Ford and Mercury models are $250 and $500 less than under the program that ended Sept. 26, and consumer cash paybacks on all 1990 carryover vehicles have been eliminated in favor of per-unit cash incentives to dealers.

Some of GM's consumer rebates on 1991 models are $200 to $500 less than before the cars were officially introduced.

Ford's modified program offers buyers cash allowances of $500 on all 1991 Ford and Mercury cars and most 1991 light trucks. The Bronco has a $1,000 rebate, and the Ford Explorer and Lincoln models do not carry incentives.

Ford has eliminated 60-month finance terms from its program. In lieu of rebates, it is offering customers finance rates of 7.9 percent for contracts up to 48 months.

The per-unit incentives to dealers on carryover 1990 Fords are $700 on Festiva; $1,000 on Crown Victoria, Escort, Tempo and Mustang; $1,300 on Taurus; $1,400 on Thunderbird; and $3,000 on Taurus SHO.

Ford light trucks carry dealer rebates of $1,000 on Ranger, $1,100 on F series, $1,300 on Aerostar and Econoline/Club Wagon and $1,500 on Bronco.

The dealer paybacks on carryover 1990 Mercury cars are $1,000 on Topaz, $1,300 on Sable, $1,400 on Cougar and $1,500 on Grand Marquis.

Lincoln dealer rebates have ben extended through Oct. 2. They are $1,500 to $2,000 on Town Car and $1,000 to $2,000 on Continental and Mark VII, based on number sold.

At GM, consumer rebates on some 1991 Chevrolet, Geo and Pontiac models have been scaled back $200 to $500. The GM new incentive program runs through Dec. 12.

Chevrolet's consumer rebates on 1991 and 1990 cars and trucks range from $500 to $1,250. As an alternative, finance rates of 7.9 percent for 48 months and 10.9 percent for 60 months are available.

Rebates on Geos are $500 on 1991 and 1990 Metro and Storm. The 1991 Prizm carries an $800 rebate, down $200 from the previous program, and the 1990 model has a $1,250 rebate.

Cash allowances on 1991 Chevrolets are $500 on Cavalier, Corsica (down $250), Beretta (down $250) and Camaro (down $500); $750 on Lumina; and $1,000 on Caprice.

Cash paybacks on 1990 Chevrolets are $500 on Cavalier, Corsica and Lumina; $750 on Beretta; and $1,000 on Camaro.

Geo Tracker offers rebates of $500 and $1,000 on the 1991 two-wheel-drive and four-wheel-drive models and $1,000 on 1990 models.

Rebates on Chevrolet trucks are $500 on 1991 Astro and $600 on the 1990 model; $500 on 1991 G-Van and $1,000 on the 1990 model; $1,000 on the 1991 and 1990 V Blazers; $1,000 on the 1991 and 1990 Suburbans; $500 on the 1991 and 1990 Lumina APV; and $750 on the 1991 and 1990 R/V pickup and cab-chassis.

Also, $500 and $1,000 on 1991 two-door and four-door S/T Blazers; $1,000 on 1990 S/T Blazers; $1,000 on 1991 and 1990 S/T pickups; and $500 on 1991 and 1990 C/K 1500-3500 pickups and cab-chassis models with automatic transmission and the 1990 model with manual transmission.

Pontiac's new consumer incentives include $500 on 1991 Firebird (down $500) and $1,000 on the 1990 model. Other rebates on 1991 and 1990 models are $500 on Sunbird, Bonneville and Trans Sport; and $750 on LeMans, 6000, Grand Am and Grand Prix.

In lieu of the cash rebates, Pontiac is offering finance rates of 7.9 percent for up to 48 months and and 10.9 percent for contracts up to 60 months on both 1991 and 1990 models.

Oldsmobile's 1991 model rebates are $500 on Silhouette; $750 on 88 and Cutlass Calais, Ciera and Supreme; and $1,500 on Toronado. The Custom Cruiser, 98 and Bravada do not carry incentives.

Rebates on Oldsmobile carryover 1990 models are $1,500 on Silhouette, 88, Custom Cruiser, 98 and Cutlass Calais and Ciera; $2,500 on Toronado; and $2,500 on Cutlass Supreme base coupe and sedan (but $2,000 on all other models).

Oldsmobile dealers may offer a special finance rate of 4.8 percent for 48 months in lieu of the 1990 rebates or 7.9 percent up to 48 months in lieu of 1991 rebates. A 10.9 percent rate for up to 60 months is available in lieu of rebates for either 1991 or 1990 models.

Buick announced rebates of $500 to $1,000 on Skylark, Century, Regal and LeSabre; $1,000 on Riviera; and $3,000 on Reatta. The payments are based on the option package ordered. The Park Avenue, Park Avenue Ultra and Estate Wagon are not included in the program.

In lieu of rebates, Buick is offering buyers finance rates of 3.9 percent for 24 months, 5.9 percent for 36 months, 7.9 percent for 48 months and 10.9 percent for 60 months.

Cadillac's buyer incentive program offers $1,500 on the 1991 Brougham and 1990 DeVille/Fleetwood, Seville, Eldorado and Brougham. No special financing is offered.

Volkswagen United States Inc. extended its dealer rebate of $500 on 1990 Fox indefinitely.

Battle ends; Toyota gets Mid-Atlantic

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

The battle between Toyota Motor Sales U.S.A. Inc. and distributor Mid-Atlantic Toyota will officially be put to rest today when Toyota takes over distribution in the five-state region.

Last week, Mid-Atlantic Toyota and Toyota Motor Sales reached an agreement after a three-month dispute. The two parties announced they had resolved "all disputes, which included business and constitutional matters."

Central Atlantic Toyota Distributors Inc., a new Toyota subsidiary, takes over for Mid-Atlantic. The distributorship served Pennsylvania, Delaware, Maryland, Virginia, West Virginia and the District of Columbia.

Toyota tried to take over Mid-Atlantic in 1987. Mid-Atlantic blocked that move, but an ensuing deal gave Toyota the right to take over distribution in three years.

In June, Toyota said it could run a better operation and told Mid-Atlantic it planned to take control Oct. 1. Mid-Atlantic said it wouldn't honor the 1987 agreement. Mid-Atlantic then filed suit, charging among other things that Toyota defrauded Mid-Atlantic.

Last week's settlement included a statement by Toyota that Mid-Atlantic was free to contact members of Congress on matters regarding Toyota. Mid-Atlantic had accused Toyota of infringing on its employees' constitutional rights.

A two-year stipend of $137.50 per vehicle was included in the 1987 agreement. That amount was to be paid to Mid-Atlantic for every Toyota sold in the region during the two years after Toyota took over. Based on Mid-Atlantic's sales history — the company delivered 82,462 vehicles in 1989 — that could amount to more than $20 million.

VOLVO

FROM PAGE 2

doesn't suit them," which he wasn't free to do as a "hired hand in the corporate environment."

Ahlstrom laughed when he was reminded of those comments. "You bet. That's what I'm really looking forward to," he said. He plans to pick a new field outside the auto business.

Ahlstrom, a naturalized U.S. citizen, will remain on the boards of a number of companies with connections to Volvo: IJ Holdings, the parent company of Minstar, a boat company in which Volvo has a 20 percent stake; Park Ridge Corp., the parent company of Hertz Corp., 26 percent owned by Volvo; Volvo GM Heavy Truck Corp.; and several Volvo companies outside North America.

North America is Volvo's single largest car market, accounting for about 38.6 percent of the car division's worldwide gross sales in 1989.

Total car sales worldwide were about $6.92 billion in 1989, or about 8.8 percent above the previous year. Car sector operating income worldwide, however, fell 46.2 percent, compared with 1988, to $312 million. And the 1989 operating income figure was 65.2 percent below 1986.

CAW gives GM until Oct. 10

By Jim Robinson
SPECIAL CORRESPONDENT

TORONTO — The Canadian Auto Workers marked midnight Oct. 10 as its strike deadline with General Motors of Canada.

CAW President Bob White wants an agreement for GM of Canada's 36,500 hourly workers that follows the pattern set at Ford. That package, reached Sept. 23 after a week-long strike, included wage increases, reduced hours and job-security protection.

GM's agenda includes improving attendance, becoming more cost competitive and achieving greater flexibility in the workplace.

White said local issues at GM will be more difficult than they were at Ford. "We could easily have a strike on local issues if we don't get those issues addressed."

One of those is the GM van plant in Scarborough, Ontario. The plant is set to close in June 1992, and White said the CAW wants a commitment to keep the plant open for the life of the agreement, which would expire in 1993. If the jobs are lost, the union wants to apply its worker security program.

At Ford of Canada, 91 percent of the 12,800 workers approved their three-year agreement. It provides cost-of-living and wage increases averaging 6.4 percent each year, security against job losses, and reduced work time by 32 hours a year.

HEALTH

FROM PAGE 1

health care premiums for single retirees under 65 and $5,650 for joint coverage.

For retirees who are over 65 and are on Medicare, AT&T will pay a maximum $500 per year in premiums for single coverage and $1,800 for joint coverage. Retirees on Medicare will be reimbursed a maximum of only $33 a month for doctor's visits.

"A lot of our people considered this concessionary; we had consternation about it," said Judi Wicker, secretary-treasurer of Communication Workers of America Local 4009 in Southfield, Mich.

AT&T hopes to attract at least 70 percent of its workers to the network. Currently, only 10 percent of the work force is enrolled in a managed care program, and AT&T's health care costs have been rising more than 10 percent a year. Lynch said AT&T spent $1.1 billion on health care last year.

The company hopes to bring its costs down to single digit increases; similar to what was achieved at Southwestern Bell Telephone Co. in St. Louis.

Milton King, district manager for benefits at Southwestern Bell, said that since its network was put in place three years ago, 65 percent of the work force, also represented by the Communication Workers of America, has enrolled.

King said the company's health care costs have increased less than 10 percent per employee annually since the program was enacted, compared to annual increases of 15 percent to 17 percent before.

"Managed care will be the trend of the future," said Margaret Mellen, a health care specialist with the Detroit office of Towers, Perrin, Foster & Crosby Inc., a health care consulting company. "Savings vary all over the place," she said, "generally from 10 percent to 15 percent."

A 1989 survey by A. Foster Higgins Inc., a health care consulting firm in New York, showed that when retirees under the age of 65 make up more than 30 percent of a company's retirees, the average medical cost is about 16 percent higher than for employers with 30 percent or fewer retirees in that age group because retirees aren't eligible for supplemental Medicare benefits until age 65.

GM's average retirement age is 58, said spokesman John Maciarz. Based on the ages of the company's 240,000 retirees, excluding 64,644 surviving spouses, at least 40 percent are in the under-65 category.

With 98,000 retirees over age 70, people most likely to be hospitalized according to health care experts, GM still faces stiff charges because Medicare does not pick up all hospital charges. For example, GM pays a $592 deductible for the first 60 days of hospitalization, $148 a day for the 61st through 90th day, $296 a day for the 91st through 150th day and 100 percent beyond 150 days.

Of GM's $2.9 billion health care bill last year, 59.2 percent was for hospital and surgical treatment.

GM already has a managed health care plan, but employees are not penalized for electing traditional coverage. As of last year, 45 percent of the hourly and 71 percent of the salaried workers were in a managed plan, but only 16 percent of the retirees were outside traditional coverage.

Output slips; cars, trucks feel pinch

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. auto production last week fell 7.38 percent below the previous week and 9.12 percent below the same week last year.

So far this year, 4,618,668 cars have been assembled, 11.41 percent below 1989.

Truckmakers' scheduled build last week fell 2.59 percent below the prior week, but it was 7.77 percent ahead of the year-ago week.

Year-to-date, 3,011,999 trucks have been built, 5.54 percent below last years total.

Last week, General Motors' Detroit truck plant closed for four weeks for inventory adjustment. GM's Moraine, Ohio, S-truck facility will be idle this week for inventory adjustment.

GM's Flint, Mich., plant will also be idle this week with line one returning Oct. 8 and line two Oct. 15. The Flint plant produces full-sized Blazer, Jimmy and Suburban wagons.

GM scheduled Saturday overtime last week at the Bowling Green, Ky., Corvette plant.

Ford Motor Co. will idle its Edison, N.J., plant this week because of facility adjustments related to the launch of the Ranger, which the plant has assembled since Sept. 10.

Ford resumes output this week at the Chicago car plant; the Lorain, Ohio, car and truck facilities; and the Louisville, Ky., truck facility.

The plants were closed for inventory adjustment.

Slated for Saturday overtime last week were Ford's Wayne, Mich., car plant and its St. Louis and Kansas City, Mo., truck operations.

Chrysler Corp.'s Dodge City truck plant in Warren, Mich., scheduled two overtime shifts last Saturday.

Ford returns; Canada climbs

As Ford of Canada workers returned to assembly lines after a one-week strike, Canadian auto production jumped 66.64 percent above the previous week and 5.97 percent above the year-ago week.

So far this year, 792,872 cars have been produced, 9.68 percent above the 1989 total.

Truckmakers assembled 34.38 percent more vehicles last week than the prior week but fell 15.00 percent below the year-ago week.

Year-to-date, 639,936 trucks have been assembled, 10.12 below last year's total.

Model year blurred by launch timing

The 1991 Caprice Classic made its big splash last January at the North American International Auto Show in Detroit.

AUTOMOTIVE NEWS/JOE WILSSENS

By John K. Teahen Jr.
SENIOR EDITOR

The windows were covered with thick paper. The merchandise was shrouded, and you didn't dare try to peek beneath those covers. Stock that couldn't be lodged in the showroom was stashed in a locked garage with windows too dirty to see through.

And then the big night. Searchlights pierced the sky. Coffee, soft drinks and snacks were served. There was music. Salespersons donned their Sunday best — or maybe company blazers — and they stayed on the floor as long as any visitor wanted to talk about automobiles.

Sound like a big event? You better believe it! It was introduction day at almost every new-car dealership in the land.

Note the word "was." It ain't like that anymore. Now, the beginning of the new model year is pretty much like any other day in the retail auto business. Old-timers mourn the passing of the hoopla; younger folks will never know what they are missing.

The beginning of the model year has become pretty much a statistical event. It is a day of record: Oct. 1 is the day the automakers start tabulating their model-year sales. It's important only because model-year sales are important.

And industry practices have clouded the model year itself. What is a model year, anyway? Chevrolet's Caprice is in the midst of a 21-month 1991 model year. The division's Geo Metro convertible must settle for a 3½-month 1990 model year.

The Caprice went on sale last January — as a 1991 model. The Metro ragtop hit the showrooms June 12 — as a 1990 model. Clear as a bell, huh?

Want more? Dealer shipments of the 1990 Oldsmobile Cutlass Supreme convertible began the week of Aug. 13, 1990, giving it the dubious distinction of being the last of the 1990 entries. It was announced as a 1990 mid-year model in an Oldsmobile press release dated Sept. 7, 1989.

And Buick has already displayed what it calls a 1992 model, a Roadmaster sedan that goes on sale next spring.

Pre-selling also has lessened the impact of the autumn intro season. Used to be, no car was

Air bags — warranties, maintenance raise questions

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

The combination of customer clamor and legislation has accelerated air-bag installation plans. But there is a tangled web of industry-wide misconceptions about air-bag warranty coverage, component costs, maintenance schedules and unresolved legal issues.

That web may ensnare carmakers, dealers and customers.

All air bags are not the same. Warranties range from two to six years; required maintenance inspection intervals range from two to four years; and the replacement cost of a single air bag ranges from $400 to $2,600.

Those disparities may soon become as important to consumers as the warranty on powertrain failure and body corrosion, or as important as the air bag itself.

The significance will become more apparent as air-bag warranties begin expiring on several makers' car lines and owners must pay for maintenance.

And unlike other systems, the most sophisticated inflatable restraint systems can tattle on owners who neglect maintenance.

An air-bag system that is not properly maintained might not work properly — or might not work at all, say air-bag suppliers and carmaker safety experts.

"If the air-bag service light is blinking on, you should not assume the air bag will go off in the event of an accident," said Claude E. Gianino, a spokesman for air-bag supplier TRW Inc. "In fact, you really should assume the opposite."

An important new wrinkle in the vehicle-maintenance area is the ability of some air-

Saturn dealers cheer for low-price strategy

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — A banquet room full of new Saturn dealers burst into cheers last week upon learning the price of General Motors' newest car.

Declaring this "the moment of truth for Saturn," GM President Lloyd Reuss told dealers that Saturn sticker prices will start "not at $10,000, not at $9,000, not at $8,000, but at $7,995" when it goes on sale on Oct. 25.

Reuss' dealer meeting audience of about 350 rose with cheering and applause that lasted a full minute. Some patted each other on the back and embraced.

"GM really did good on this one," said an elated Lewis King, franchisee for the Fort Lauderdale, Fla., area. "They've made a lot of dealers

New York dealers raided in drug money crackdown

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Federal agents raided five New York City-area car dealerships last week for allegedly accepting drug profits in cash for the purchase of luxury cars and failing to make required tax reports of the transactions.

More than 200 agents from four federal agencies staged the raids in which 12 dealership employees and three insurance agents were arrested, and 31 cars and seven dealership bank accounts were seized.

Those arrested were charged in federal court in Manhattan with money laundering and cash reporting violations as part of a continuing investigation code-named "Operation Drug Wheels."

Among those arrested were two dealership sales managers and the son of a new car dealer.

The five dealerships raided were: Gidron Ford of Mt. Kisco; Mercedes-Benz Manhattan; Manhattan Nissan; Bronx Auto Mall Inc., doing business as Bronx Acura; and 11th Avenue Motors Inc., doing business as Manhattan Mazda and City Mazda.

"These arrests can be considered notice to other automobile dealers that these laws will be vigorously enforced," said Mary Lee Warren, chief of narcotics in the U.S. Attorney's Office in New York.

The criminal complaints alleged that dealer employees and insurance agency employees aided narcotics dealers by knowingly accepting drug profits in cash for the purchase of automobiles, cash reporting violations and mail fraud.

Toyota No. 3 in car sales, tops Chrysler in model year

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. were the clear winners in the 1990 model year as both companies made solid gains in vehicle sales while their Big 3 rivals continued to slide.

In the car sales arena, Toyota — including its Lexus Division — delivered 911,736 units, 56,188 more than Chrysler Corp. did for the model year.

Combining car and truck sales, Toyota also moved closer to Chrysler as the No. 3 vehicle seller in the United States. Chrysler, which led Toyota by 1.1 million car and truck sales in the 1989 model year, closed out the 1990 model year only 616,630 car and truck sales ahead of Toyota.

Honda, including Acura, trailed Chrysler in car sales by 5,999 units. With 416,000 sales, the Honda Accord was the best-selling car in

Protectionism flares up at Paris

Peugeot's Calvet leads barrage against EC on Japan quotas

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

PARIS — Most factory representatives and visitors at the Paris Auto Show last week expected the European Commission to come under fire for its attempts to deal Japanese automakers a bigger slice of the European market after 1992.

But even forewarned, the intensity of the barrage jolted just about everyone.

Led by Jacques Calvet, the mercurial chairman of France's Peugeot Group, auto executives from several countries called for keeping Japanese carmakers at bay for up to 10 years after Europe dismantles most of its internal trade barriers on Jan. 1, 1993.

At the same time, many insisted on "full equal access" to the Japanese market as a condition for lowering European barriers.

Amid all the euphoria and good will over the run-up to EC92, such hard-edged protectionist talk has been scarce in Europe in recent years. Indeed, European industrial and political leaders have gone out of their way to stress that post-92 Europe will be no "fortress," that it will be open to everyone.

But "open access" sounds one way in a rising market, and quite another in a down one. Industry executives, already skittish over flattening sales, have been quick to grasp the French argument that the commission is proposing to give Japan all of the expected growth in the European market until the turn of the century.

European executives here noted that the Japanese took 20 percent of the German market — Europe's largest — in August, up five points from their traditional share.

The commission, the European Community's executive arm, is believed to be close to a deal that would allow the Japanese 14.5 percent to 18 percent of the 12-nation Common Market by 1997 or 1998, up from an EC-wide average of about 10 percent now.

Calvet, who has emerged as the spear carrier for French policy and protectionist thinking on the crucial trade issue, used his show forum to heap scorn on Japanese trading practices and to lash Britain for acting as what he called Japan's "aircraft carrier" in Europe.

Calvet, pointing out that Japanese producers captured 32 percent of the U.S. market in August, demanded that the talks on Japanese restraints be suspended until the commission has adopted a new, rock-hard protectionist line.

Calvet set forth a five-point plan that would strictly limit Japanese cars in Europe for a decade. He said the principles should be adopted unanimously "before contacts are resumed with the Japanese."

Calvet's "non-negotiable" demands would prohibit new Japanese transplants in Europe and set lower production targets for transplants now operating or planned.

Current Japanese quotas should be frozen for at least 10 years after Jan. 1, 1993, and kept in force if the Japanese do not demonstrate "a clear willingness for reciprocity," he said.

Market share for Japanese automakers is now limited to 1.5 percent in Italy, 3 percent in France and 1.2 percent in Spain.

Calvet launched an especially barbed attack on Britain, which has aggressively courted and won every major Japanese transplant project in Europe. Nissan, the first, began producing at its Sunderland plant in 1986, and Toyota and Honda are building plants in Britain.

"If Great Britain doesn't want the EC, then they shouldn't stay in it," Calvet said. "Great Britain can no longer have a purely national view of its interests."

Referring to Britain as Japan's "aircraft carrier just off the coast off Europe, or even Japan's fifth major island," Calvet heaped scorn on Nissan and British claims that Nissan's U.K.-built Primera sedan has 80 percent local content — thereby qualifying as a European,

Volkswagen's redesigned Vanagon is due in the United States in '92.

Fiat, French group engineer equity swap

FRANKFURT — Italy's Fiat Group, parent of the automaker, said last week that it had agreed to swap equity with France's Compagnie Generale d'Electricite (CGE) and cooperate in telecommunications and automotive components.

Under terms of the accord, Fiat will acquire 6 percent of CGE's stock. In turn, CGE will acquire about 3 percent of Fiat, which will receive a net cash payment of about $435 million.

The activities of CGE's Alcatel SA, a European market leader in telecommunications systems, and Telettra, Fiat's telecommunications unit, will be merged.

Fiat also will acquire 50.1 percent of CGE's Compagnie Europeene d'Accumulateurs, which makes generators and lead batteries mainly for the automotive sector. Fiat is active in the business through its Magnetti Marelli unit.

Announcement of the CGE deal disappointed some auto industry analysts, who said a possible accord between Chrysler Corp. and Fiat Auto now seemed remote.

"This probably means that the big deal on the car side is farther off," said John Lawson of Nomura Securities in London. "This has the effect of extending their areas of interest."

— Richard Johnson

Build schedules reflect optimism

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Domestic automakers have started the fourth quarter with a hefty production schedule of 1.7 million cars — 7.81 percent more than built in the fourth quarter of 1989.

Fourth quarter schedules are flexible and could be adjusted if October sales lag expectations, in order to avoid a year-end stockpile of cars.

In the fourth quarter last year the industry did not cut back on schedules and inventory levels rose to a 92-day supply by year-end.

Jean Claude Gruet of UBS Securities said the strong forecast is primarily a result of manufacturers "betting on sales not being as bad" as last year's fourth quarter results.

"GM is the most aggressive in its schedule and may have to cut production to balance inventory levels at year-end," Gruet said.

The analyst said, "Ford has great sales expectations and will go along with its schedule, depending on market share. Chrysler remains up in the air, reduced pricing may help, but output is still at risk of being cut."

FOURTH QUARTER U.S. CAR PRODUCTION FORECAST

1990 forecast vs. 1989 actual

	1990	1989
GM	771,000	699,079
Ford	399,000	381,001
Chrysler	218,000	209,535

Pinto, 37, joins *Automotive News* from ITT Automotive of Auburn Hills, Mich., where she was a marketing administrator. She has 13 years experience in auto-related businesses, and as a reporter has contributed to several Detroit-area newspapers.

Pinto is a Detroit native and has a bachelor's degree in journalism from Oakland University in Rochester Hills, Mich.

GASSING UP

Development of alternate-fuel trucks gains speed; Chevrolet plans new option

By Joseph Bohn
TRUCK EDITOR

Chevrolet plans to offer alternate-fuel engines as regular production options in a variety of light trucks by the mid 1990s.

The program will significantly expand on GMC Truck Division's plan to build 1,000 natural gas-powered trucks in 1991, and represents the industry's most aggressive push into alternate fuels yet.

Utilities power drive to gas, Page 16

Ford Motor Co. currently has no specific plans to produce natural gas-powered trucks, according to a spokeswoman.

Ford did test 27 Ranger pickups operated on natural gas-powered engines, and is evaluating the results.

Jeff Seisler, executive director of the Natural Gas Vehicle Coalition in Arlington, Va., said his group has met and is working with Ford and Chrysler Corp. as well as General Motors regarding natural gas vehicle programs, but "is not at liberty to diclose the nature of the discussions."

Some other commercial vehicle manufacturers — such as the Flexible Bus Co. in Columbus, Ohio, Ontario Bus Industries in Toronto and Tecogen Inc. of Waltham, Mass. — also have begun producing natural gas powered for sale in the United States and Canada.

Tecogen, working with GM, modified a GM 427-cubic-inch V-8 to run on natural gas, and has a $700,000 order to convert 10 California school buses to compressed natural gas.

Over 220 natural gas buses have been produced through the Urban

see GAS, page 16

Pacific Gas & Electric plans to have 40 natural gas fueling stations, which use conventional-looking pumps, in California by the end of 1992.

Corrections

- A chart in the Oct. 1 issue listed corporate average fuel economy figures for the 1990 model year, not for 1991, as the headline indicated.
- Stories in the Sept. 24 issue incorrectly stated that Saturn is the first U.S. plant to use a water-based paint system. Several other plants in Canada and the United States use the method.
- A story in the Sept. 24 issue about a suit over an allegedly defective Mexican Jeep mistakenly said a federal appellate court had ordered a lower court to choose the proper venue. The lower court was actually told to determine whether Florida or Michigan law had a more "significant relationship" to the plaintiff's case and then to apply that law at trial in Florida.

Japan makers on spending spree

Industry commits $10 billion to new plants, technology upgrades

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese automakers are pushing up capital investment by almost 30 percent this fiscal year, adding new systems and technology that could widen Japan's productivity edge over American and European carmakers.

They are building new plants and increasing automation despite higher interest rates, the loss of easy access to money on the Tokyo stock market and all the uncertainties of the Persian Gulf crisis. The investment plans outlined here are for the fiscal year that ends next March 31.

Analyst Steve Usher of Kleinwort Benson says the Japanese companies already have "the newest and most efficient plants in the world. Now, they have decided to turn up the heat, and they have the cash flow to afford it." The Japanese makers can extend the lead they already have, he said.

But Japanese executives describe their efforts in rather self-effacing terms. They insist they are simply responding to the labor shortage and the increasing demands of the domestic market for more diversity and that the result is not necessarily any great stride in productivity.

Atsushi Muramatsu, Nissan Motor Co. Ltd. executive vice president, says the company could reduce work hours 15 to 20 percent through greater efficiency and increased automation. That is one of Nissan's goals in earmarking 250 billion yen ($1.8 billion) for capital investment this fiscal year. But that does not necessarily mean a 15 to 20 percent reduction in costs, Muramatsu says, if the company must increase capital investment to save labor and the tight money situation continues.

Higher interest rates, higher gas prices and continuing chaos in the stock market, Muramatsu said, would reduce the possibility of a major gain in profit and minimize gains in productivity.

Analyst Neal Doying of Baring Securities agrees that the Japanese companies are pushing capital investment now because "they have to" to meet market needs.

Still, the results should be impressive. It may become more difficult for Americans and Europeans to reduce the productivity gap, Doying said, citing a Massachusetts Institute of Technology study that said it takes 16.8 man-hours to produce a car in Japan, compared with 25.1 man-hours in the United

Mazda delays debentures sale

TOKYO — Citing higher interest rates and lower prices on the Tokyo stock exchange, Mazda Motor Corp. has temporarily shelved a plan to issue 100 billion yen ($735 million) in convertible debentures to fund capital spending.

Mazda announced the bond issue Sept. 20 and withdrew it eight days later after Mazda's share price had fallen 12 percent, to 612 yen. Mazda shares closed Thursday at 627 yen, down from 670 on Wednesday.

Mazda will fund the first part of its 120 billion yen ($869 million) capital spending plan out of cash flow and return to the market when conditions warrant.

Supercharged V-6 slated for Pontiac, Oldsmobile sedans

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Upscale customers will be able to get traditional Pontiac and Oldsmobile power in 1992 with a new supercharged V-6 engine, without having to sacrifice much fuel economy.

The supercharged General Motors 3800 V-6 that is due to debut in the Buick Park Avenue Ultra late in the 1991 model year will be standard in 1992 on the Oldsmobile 98 Touring Sedan and Pontiac Bonneville SSE, GM engineering sources said.

The Ultra also may get the supercharged version of the 3.8-liter powerplant as standard equipment in 1992. The decision on making the supercharger standard or optional in 1992 will depend on buyer reception to the limited-availability engine in 1991, sources said.

The 200 horsepower of the souped-up 3800 is just the ticket for the Touring Sedan and SSE, which are geared to a more performance-oriented audience, divisional sources said.

Neither Pontiac nor Oldsmobile would confirm the report. Making the high-powered 3800 standard on the three models would yield a volume of about 22,000 superchargers for Eaton Corp., based on 1990 sales figures.

Several hundred 1991 Ultras will get the 3800 engine with the Eaton supercharger, Buick spokesman Larry Gustin has said.

Normally aspirated versions of the 3800 V-6 develop 170 hp and 220 pounds-feet of torque at 3,200 rpm. Fuel economy is rated at 18 mph in city driving and 27 mph on the highway.

The supercharged version of the V-6 develops 30 more horsepower and 260 pounds-feet of torque at 3,200 rpm. Although the engine has not received official EPA gas mileage ratings, engineering sources familiar with preliminary tests said the supercharger may take only 1 mpg from the current fuel economy figures.

Tonkin drops lawsuit over fleet subsidies

By Kristine Stiven Breese
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Former National Automobile Dealer Association President Ron Tonkin last week dropped his suit on fleet subsidies against the nation's four top-selling manufacturers and leading car rental companies.

After reviewing the 1991 fleet programs for defendants Chrysler Corp., Ford Motor Co., General Motors and Toyota Motor Sales USA Inc., Tonkin and his attorneys agreed that progress on the crucial buyback issue has been significant enough to drop the suit. Tonkin, an Oregon megadealer, had claimed the practice violated the state's anti-price discrimination laws.

According to Tonkin, all four manufacturers plan to buy back all rental fleet vehicles sold to Avis Rent A Car System, Budget Rent-A-Car, Hertz Corp. and National Car Rental System Inc. and to make those cars available to dealers.

Tonkin's suit alleged the manufacturers gave rental companies an unfair subsidy by selling cars at cut rates and by allowing them to sell late-model, low-mileage used cars at prices that undercut dealers. Now, all those cars will be sold directly to dealers.

Tonkin says he can't take all the credit for the new posture being adopted by the auto companies. But he said his lawsuit and the wide support he received from dealers around the country brought attention to the issue.

"The lawsuit was narrowly constructed to address just the rental car part of the fleet business, and that's where they made changes," Tonkin said. "The suit was not wholly responsible. But let's face it, the suit brought visibility to the issue and received amazing support from dealers across the country."

Former NADA President Ron Tonkin credits dealer pressure for prompting a change in buyback policies.

Earlier this year, Tonkin sent a letter to dealers around the country asking for their support and donations to help offset the $1 million in legal fees he assumed he would have if the case reached court. He collected more than $60,000 from individual dealers and dealer associations.

In addition, in August Tonkin asked the NADA executive committee for financial assistance. He say he still hopes to get some money from NADA to offset the $100,000 to $150,000 he's already spent on attorneys. Tonkin adds that he'll return "80 to 100 percent of the money donated by dealers."

Tonkin says the show of support from dealers was the most instrumental thing that pushed the car companies to change their stance.

Target: plant emissions

Air bill zeros in on auto paint shop toxics

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Auto assembly plants are no longer smokebelchers, the industry says proudly.

But they're not clean enough, retort the authors of the new clean air bill.

Congressional negotiators may be bickering loudly, but passage of the nation's first new clean air bill since 1977 appears imminent. House and Senate conferees working on the measure say they're determined to agree on a new clean air bill by month's end.

If Congress and President Bush approve the bill in the waning months of the current legislative session, the provisions would take full effect within one to 10 years. The bill's impact on vehicle emissions has been widely discussed. But three sections of the new bill — covering permits, air toxics and nonattainment — would impose new requirements on the manufacturing end of the automobile industry. The most significant controls would apply to assembly plant paint shops — the only significant ozone pollution source in the manufacturing process.

More than 190 industrial emissions would be reclassified as air toxics, including several solvents used in paint shops.

- Auto plants would need new state operating permits just to stay in business. The permits would specify what pollutants the plant emits and how the company plans to control them.
- More than 190 industrial emissions would be reclassified as air toxics, including several solvents used in paint shops. Several states already control some of these pol-

1991 passenger car highlights

ALFA ROMEO

164

Base engine ..... 3.0-L 183 hp V-6
Optional engines ..... 3.0-L 200 hp V-6
Drive system ..... fwd
Body styles ..... 4-dr.
Models ..... 164, 164 L, 164 S

Introduced earlier, the all-new sport sedan has a 3.0-liter V-6 engine in 183 or 200 hp configurations and a five-speed manual transmission. It features fwd, fully-independent suspension and four-wheel disc brakes. Standard are automatic climate control air conditioning; power steering, brakes, windows and adjustable front bucket seats; dual electric remote outside mirrors; tinted glass; front and rear fog lamps; telescoping steering wheel, and cruise control. The upscale L and S have ABS, leather upholstery, six-way power front seats, front and rear-seat heating elements and cast alloy wheels.

Spider

Base engine 2.0-L I-4
Optional engines ..... none
Drive system ..... rwd
Body styles ..... convertible
Models ..... Spider, Spider Veloce

New are a freshening of the front end and an all-new rear end. The new front bumper and grille opening is in one-piece. Back changes include full-width taillamp assemblies, an upturn to the rear decklid and a one-piece bumper. Also new: rocker-panel skirts and new outside mirrors. Power steering is standard; automatic transmission is a new option. The 2.0-liter four-cylinder engine's driveability and performance are improved with fuel injection and other changes.

ASTON MARTIN

Virage

Base engine 5.4-L V-8
Optional engines ..... none
Drive system ..... rwd
Body styles ..... 2-dr.
Models ..... Virage

The new four-seater has a 32-valve twin overhead cam eight-cylinder engine, sequential fuel injection and a 330 hp rating. Available is a five-speed manual and a three-speed automatic transmission. Suspension is all aluminum.

AUDI

80

Base engine 2.3-L I-5
Optional engines ..... none
Drive system ..... fwd, 4wd
Body styles ..... 4-dr.
Models ..... 80, 80 Quattro

The base gets a 2.3-liter five-cylinder engine, the same as 80 Quattro's. Newly available is a four-speed automatic transmission. New all-weather tires are standard and performance tires are optional on Quattro. It has standard ABS; a new sport suspension with four gas-charged shock absorbers, a rear stabilizer bar and lower springs; and new front sport seats.

90

Base engine 2.3-L I-5
Optional engines ..... none
Drive system ..... fwd, 4wd
Body styles ..... 4-dr.
Models ..... Audi 90, 90 Quattro

Audi 90 gets a four-speed automatic transmission, the only choice on the base model. Quattro has new cloth upholstery, standard 15-inch sport wheels with performance tires and optional 14-inch wheels with all-weather tires.

Coupe Quattro

Base engine 2.3-L I-5
Optional engines ..... none
Drive system 4wd
Body styles ..... 2-dr.
Models ..... Coupe Quattro

New is a glass sunroof with power tilt and slide. All-weather tires are optional.

100

Base engine 2.3-L I-5
Optional engines ..... none
Drive system ..... fwd, 4wd
Body styles ..... 4-dr.
Models ..... Audi 100, 100 Quattro

Audi 100 gets a new four-speed automatic transmission; Quattro gets all weather tires as standard and a height adjustment feature on the front seat.

200

Base engine 2.2-L I-5
Optional engine 3.6-L V-8
Drive system ..... fwd, 4wd
Body styles ..... 4-dr., wagon
Models ..... Audi 200, 200 Quattro, 200 Quattro Wagon, V-8 Quattro

V-8 Quattro gets a five-speed manual transmission as a no-cost option and has permanently engaged awd and ABS with the V-8. Base sedan has lattice-styled 15-inch wheels; all-weather tires are optional. The Quattro sedan and wagon have more power; the 2.2-liter engine is now rated at 220 hp.

BENTLEY

Continental

Base engine 6.8-L V-8
Optional engines ..... none
Drive system ..... rwd
Body styles ..... convertible
Models ..... Continental Convertible

There is little change for '91.

Eight

Base engine 6.8-L V-8
Optional engines ..... none
Drive system ..... rwd
Body styles ..... 4-dr.
Models ..... Eight

Eight has little change for '91.

Mulsanne S

Base engine 6.8-L V-8
Optional engines ..... none
Drive system ..... rwd
Body styles ..... 4-dr.
Models ..... Mulsanne S

There is little change for '91.

Turbo R

Base engine 6.8-L V-8
Optional engines ..... none
Drive system ..... rwd
Body styles ..... 4-dr.
Models ..... Turbo R

There is little change for '91

BMW

3-Series

Base engine 1.8-L I-4
Optional engines 2.5-L I-6
Drive system ..... rwd, 4wd
Body styles ..... 2-dr., 4-dr., convertible
Models 318i, 318is, 325i, 325is, 325ix, M3

The new 318is coupe and 318i sedan bring the model count to nine. Both have an all-new 1.8-liter four-cylinder engine rated at 134 hp with four valves per cylinder. It is mated to a five-speed manual transmission. The new 318i sedan has ABS, power-assisted steering, central locking-power outside mirrors, air conditioning, power windows and driver-side air bag. The 318is coupe gets M-Technic suspension with anti-roll bars front and rear and sports-tuned shocks.

5-Series

Base engine 2.5-L I-6
Optional engines 3.5-L I-6, 3.6-L I-6
Drive system ..... rwd
Body styles ..... 4-dr.
Models 525i, 535i, M5

There is a restyled M5 sedan with a 3.6-liter 310-hp six-cylinder engine. Badges and discreet spoilers appear at its front and rear. There are smooth side sills. The M5 has 10-way power-adjustable front seats with increased lateral support. Rear passengers have contoured seats and a center console/storage compartment. The 535i sedan gets a four-speed automatic transmission and new 4.27 final-drive ratio. It retains its 3.5-liter engine. The 525i sedan gets more power: a 2.5-liter engine rated at 189 hp.

7 Series

Base engine 3.5-L I-6
Optional engines 5.0-L V-12
Drive system ..... rwd
Body styles ..... 4-dr.
Models 735i, 735iL, 750iL

All have four-speed automatic transmissions; 735i and 735iL, with six-cylinder engines, have new 4.27 final-drive ratios. The 750iL, with a 12-cylinder engine, has a 3.64 final-drive ratio.

850i

Base engine 5.0-L V-12
Optional engines ..... none
Drive system ..... rwd
Body styles ..... 2-dr.
Models 850i

The new top-of-the-line 850i coupe, which replaces the discontinued 6-series, has a sleek shape, a V-12 mated to a six-speed manual transmission, automatic stability control for slippery road conditions, an all-new chassis with an exclusive patented rear-suspension system and a luxurious interior with a new seat-integrated belt system. Utilizing the same engine as 750iL, the new 850i has a 5.0-liter, 296-hp V-12 engine.

BUICK

Century

Base engine 2.5-L Tech-4
Optional engines 3.3-L V-6
Drive system ..... fwd
Body styles ..... 2-dr., 4-dr., wagon
Models ..... Custom, Limited

Changes include new grille and front-end panel, new park and turn signal lenses and a revised taillamp design. Revised are the suspension and front brake rotors. New two-tone striping is standard on Limited sedans and wagons.

LeSabre

Base engine 3.8-L V-6
Optional engines ..... none
Drive system ..... fwd
Body styles ..... 2-dr., 4-dr.
Models ..... LeSabre, Custom, Limited

Structural improvements include lower rail reinforcements, new steering-column supports, and stiffer cowl bar and dash barrier. Also improved: ABS, a brake/transmission interlock, a new fuse system that packages all underhood fuses in one panel, and revised front-strut mounts.

Park Avenue

Base engine 3.8-L V-6
Optional engines ..... none
Drive system ..... fwd
Body styles ..... 4-dr.
Models ..... Park Avenue, Ultra

Introduced in July, the redesigned Park Avenue features the 3.8-liter V-6 engine with tuned-port injection and an electronically controlled four-speed automatic transmission; new dual automatic climate controls for driver and front passenger; body substantial reinforcement; and such convenience items as lighted mirrors in visors for rear passengers. Electra name is dropped.

Reatta

Base engine 3.8-L V-6
Optional engines ..... none
Drive system ..... fwd
Body styles ..... 2-dr., convertible
Models ..... Reatta

The advanced 3.8-liter V-6 with tuned port-injection and an electronically controlled automatic transmission become standard. The more powerful engine provides 170 hp. Also new are a new steering gear, more acoustical insulation, and standard Twilight Sentinel.

Regal

Base engine 3.1-L V-6
Optional engines 3.8-L V-6
Drive system ..... fwd
Body styles ..... 2-dr., 4-dr.
Models ..... Custom, Limited, Gran Sport

Regal coupe gets a fresh grille and front fascia with new park and turn signal lenses. Both the coupe and sedan (introduced in June) have 16-inch aluminum wheels, standard split front seat with storage armrest, and front bucket seats with center console standard on Gran Sport and optional on Limited. A new analog gauge cluster is standard on Limited and Gran Sport, as are woodgrain accents and revised door-panel trim. The 3.8-liter V-6 engine with turned-port injection, introduced earlier as an exclusive Regal option, becomes standard on Gran Sport and available on all other models.

Riviera

Base engine 3.8-L V-6
Optional engines ..... none
Drive system ..... fwd
Body styles ..... coupe
Models ..... Riviera

Power and performance are beefed up by a 3.8-liter V-6 with tuned-port injection coupled with an electronically controlled automatic transmission. Other changes include a new grille, a new steering gear and added acoustical insulation. ABS is standard.

Roadmaster

Base engine 5.0-L V-8
Optional engines 5.7-L V-8
Drive system ..... rwd
Body styles ..... sedan, wagon
Models ..... Roadmaster, Limited, Estate Wagon

Roadmaster returns to the lineup this fall with a completely redesigned Roadmaster Estate Wagon; an all-new sedan will debut next spring as a '92 model. The aerodynamic eight-passenger wagon has a fuel-injected V-8 delivering 170 hp. The sedan will seat six and have a 180-hp fuel-injected 5.7-liter V-8.

Skylark

Base engine ..... 2.5-L Tech 4
Optional engines 2.3-L Quad-4, 3.3-L V-6
Drive system ..... fwd
Body styles ..... 2-dr., 4-dr.
Models ..... Skylark, Custom, Gran Sport, Luxury Edition

A dual-resonator induction system reduces noise and vibration in the standard 2.5-liter Tech 4 engine. Optional 3.3-liter 160-hp V-6 and 2.3-liter Quad 4 engines are available for all. Standard on all are 14-inch wheels, replacing 13-inchers. ABS is optional on Gran Sport. Power door locks are standard on coupe and sedan.

CADILLAC

Allante

Base engine 4.5-L V-8
Optional engines ..... none
Drive system ..... fwd
Body styles ..... convertible
Models ..... Allante Convertible, Allante Convertible Hardtop

Suspension and steering refinements include a speed-dependent damping system and improved steering components. Engine operation is quieter due to an air-intake resonator. Platinum-tipped spark plugs increase gas and electrical erosion-resistance.

Brougham

Base engine 5.0-L V-8
Optional engines 5.7-L V-8
Drive system ..... rwd
Body styles ..... 4-dr.
Models ..... Brougham, Brougham d'Elegance

Cadillac's only rwd vehicle has improved power and handling. Both engines have added horsepower. Brougham has a new four-speed automatic transmission with overdrive and torque-converter clutch, a new electronic steering system and a new ride package.

Deville

Base engine 4.9-L V-8
Optional engines ..... none
Drive system ..... fwd
Body styles ..... 2-dr., 4-dr.
Models ..... Coupe DeVille, Sedan DeVille

Power is boosted via a 4.9-liter engine with sequential-port fuel injection. Front restyling includes a new hood and wider grille. New as standard are ABS; rear-window defogger with heated outside mirrors; child restraint seatbelt-locking device; 15-inch cast-aluminum wheels; EZ-Kool glass; automatic door locks; Twilight Sentinel; and central door unlocking.

Eldorado

Base engine 4.9-L V-8
Optional engines ..... none
Drive system ..... fwd
Body styles ..... 2-dr.

ncentives grow as Chrysler, Ford, imports fan the flames

ncis J. Gawronski
TIVE NEWS STAFF REPORTER

rysler Corp. and several im- extended buyer and dealer ntives last week, and Ford r Co. increased the consumer tes on some of its 1991 models. rysler's revised program, h runs through Dec. 16, offers l buyers of 1989-91 cars and s incentives of $300 to $3,000 nancing at annual percentage of 7.9 percent for 48 months 9 percent for 60 months.

cluded are the 1991 Dodge dow/Plymouth Sundance rica; Chrysler, Dodge and Ply- h minivans; Dodge/Plymouth Colt Vista; Dodge Ram minivan and wagon; and Jeep Cherokee.

Cash rebates on 1991 cars are: $1,000 on Dodge Dynasty; $750 on Chrysler Fifth Avenue, Imperial and New Yorker Salon; $500 on Dodge Spirit, Shadow, Daytona and Monaco; Plymouth Acclaim, Laser and Sundance; Chrysler LeBaron; and Eagle Premier and Talon; and $400 on Dodge and Plymouth Colt and Eagle Summit.

Rebates on 1991 trucks are: $3,000 on Jeep Grand Wagoneer; $750 on Ram conversion van and Ramcharger; $500 on Ram van, Ram light-duty (except diesel) and Jeep Wrangler; and $300 on Dodge Dakota and Jeep Comanche.

Cash rebates on 1989-90 Chrysler cars are: $2,500 on Dodge Monaco and Eagle Premier; $2,000 on Chrysler Fifth Avenue and Imperial; $1,500 on Chrysler LeBaron coupe; $1,300 on Dodge Dynasty, Daytona and Shadow; Plymouth Sundance; and Chrysler New Yorker Salon and New Yorker Landau.

Also, $1,000 on Dodge Spirit; Plymouth Acclaim and Laser; Chrysler LeBaron sedan; Dodge and Plymouth Colt and Vista; and Eagle Talon and Summit; and $500 on Chrysler Town and Country and LeBaron convertible.

Cash rebates on 1989-90 Chrysler trucks are: $3,000 on Jeep Grand Wagoneer; $2,500 on Jeep Cherokee; $2,000 on Ram light-duty (except diesel) and Ramcharger; $1,750 on Ram conversion van; $1,500 on Ram van, Ram wagon and Dakota; $1,000 on Power Ram 50 4x4 and Jeep Comanche; $750 on Ram 50 4x2; and $500 on Ram minivan, Jeep Wrangler, Dodge Grand Caravan and Plymouth Grand Voyager.

Rebates of $2,500 on Dodge Raider, $2,000 on Chrysler Conquest and $1,000 on Eagle Medallion are for 1989 models only.

On Sept. 27, Ford Motor announced a flat $500 consumer rebate on all 1991 Ford and Mercury cars and Ford trucks (except Bronco, $1,000). Last week, it increased payments to $750 on Ford Taurus and Thunderbird and Mercury Sable, Cougar and Grand Marquis and to $1,000 on Ford Ranger with manual transmission.

Ford also placed a customer cash rebate of $1,500 on 1990 Lincoln Town Car, Continental and Mark VII. Both programs run through Dec. 11.

Mitsubishi Motor Sales of America Inc. announced both consumer and dealer rebates on 1991, 1990 and 1989 cars and trucks in a program that ends Oct. 31.

The Mitsubishi payments vary by region, with all six paying dealer rebates on 1991 trucks and three paying cash on 1991 cars. The Southwest region is paying Mitsubishi's first consumer rebates on 1991 models — $1,000 on Montero.

Consumer rebates range from $500 to $2,000 on 1989 and 1990 cars and sport-utilities.

Dealer rebates are $500 to $2,500 per unit on 1989 and 1990 cars and sport-utilities, and $600 to $1,000 on 1989, 1990 and 1991 light trucks, vans and wagons.

Mitsubishi is offering incentives of $150, $300 and $500 to dealers on 1991 Mirage, Eclipse and Galant models, based on the number sold.

Nissan Motor Corp. in U.S.A. announced dealer rebates on 1990 cars and trucks and 1991 trucks. They run through the end of the year.

On the standard Sentra, Nissan is paying dealer rebates of $1,000 per unit sold in October, $750 in November and $500 in December. Other Sentras carry payments of $1,500 in October, $1,250 in November and $1,000 in December.

Payments to dealers on all 1990 Stanza models are $800 on the first unit sold, $1,000 on the second, $1,300 on the third and $1,500 on the fourth and above. Rebates on all 1990 Maxima models are $200 for the second and third units sold, $400 for the fourth and fifth and $700 for the sixth and above.

The 1990 240SX carries dealer payments of $1,000 for the first unit sold, $1,500 for the second and $2,000 for the third and above. Dealers receive $1,200 for every 1990 truck sold.

In a dealer program that covers all 1991 truck models and ends Jan. 4, 1991, Nissan is paying dealers $400 for the first unit sold, $500 for the second, $600 for the third, $700 for the fourth and $800 for the fifth and above.

Montero (1991)	$1,000	10/31
Subaru (1990)		
Justy	$500-1,000	11/2
Loyale	$800-1,500	11/2

Note: Some makers offer rebates to buyers of 1988 and 1989 models. Those programs are omitted from this table because of the limited number of those vehicles still in dealers' hands.

INAUGURAL EVENT

1991 North American International Auto Show Detroit Presents

Industry Trade Days PREVIEW

Your exclusive preview of the auto industry's leading exhibition January 10 & 11 1991 Cobo Center, Detroit, MI USA

A TWO DAY, PRE-SHOW OPPORTUNITY TO SEE THE LARGEST ONE-ROOM AUTO SHOW IN THE WORLD

For the first time ever in North America, suppliers to the worldwide automotive industry will be given the chance to preview more than 700 of the international automotive industry's newest products and concept vehicles of the future — for two days before the general public is admitted. Here's a unique opportunity to entertain your key customers and prospects, host a reception or conduct a meeting around one of the world's most influential auto shows. You won't find a better setting in which to talk about your business. For more information or to obtain your credentials today, call Julie at:

Phone: (313) 643-0250
Fax: (313) 643-8788

THE NORTH AMERICAN INTERNATIONAL AUTO SHOW IN DETROIT

Preview Hours:
Thursday, January 10 - Noon to 11:00 pm
Friday, January 11 - 9:00 am to 2:00 pm

Detroit Auto Dealers Association, 1800 W. Big Beaver, Troy, MI 48084

SALES

FROM PAGE 1

the United States, 100,051 units ahead of the Ford Taurus.

"Model year 1991 will not change," predicts auto analyst Lee McMillan of Marxman Management & Research in Northbrook, Ill. "The Japanese models will continue to sell," particularly if oil prices continue to rise due to the crisis in the Middle East.

Sales of domestic and imported cars and trucks in the 1990 model year totaled 14,054,937, a 7.08 percent decline from the 1989 model year. Domestic car sales were off 8.70 percent, and import car sales were off 8.25 percent, for a combined loss of 8.57 percent. Combined import and domestic truck sales fell 3.85 percent.

Due to an 8.8 percent drop in vehicle sales, General Motors' share of the car and truck market slipped to 34.8 percent from 35.5 percent in 1989. Ford's sales were off 11.2 percent, and its market share dropped to 23.7 percent from 24.8 percent. Chrysler's 16.1 percent sales decrease put its market share at 12.4 percent, compared to 13.7 percent last year.

All major Japanese makers, led by Toyota with an 8 percent share, made gains in market share.

"The Japanese have a good image," said Bill Vanderbok, director of research for Plog Automotive Research in Reseda, Calif. "But almost every domestic nameplate and many of the Europeans carry an image burden."

For the last 10 days of September, domestic vehicle sales were down 14.3 percent from a year ago. For all of September, combined import and domestic vehicle sales were off 9.32 percent; and for the first nine months of this year, domestic and import vehicle sales were down 5.68 percent from 1989.

PRODUCTION

Car build in Sept. is 20-year low

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

September auto production in the United States was the lowest for that month since 1970.

U.S. automakers assembled 536,339 cars, the lowest for that month since the 478,322 total of 20 years ago. September production rose 2.44 percent above the prior month but fell 6.84 percent below the year-ago month.

Auto production in the third quarter was 1,427,593. It trailed the second quarter by 18.04 percent but was 2.48 percent above third quarter of 1989.

So far this year, manufacturers hold the following shares of 1990 car production:

General Motors, 44.31 percent; Ford Motor Co., 23.16 percent; Chrysler Corp., 11.57 percent; Honda of America Manufacturing Inc., 7.05 percent; Toyota Motor Manufacturing U.S.A. Inc., 3.54 percent; New United Motor Manufacturing Inc., 3.23 percent; Mazda Motor Manufacturing (USA) Corp., 2.87 percent; Diamond-Star Motors Corp., 2.40 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.40 percent; and Subaru-Isuzu Automotive Inc., 0.47 percent.

Domestic truck producers built 318,680 units in September, 0.52 percent below the prior month and 3.00 percent above the year-ago month.

Truck assembly in the third quarter was 901,232 units, 21.14 percent below the second quarter, and 1.58 percent above the third quarter of 1989.

Canadian auto producers assembled 79,704 cars in September, 2.40 percent above the prior month and 4.34 percent below the year-ago month.

September car production was the lowest for that month since 1987 when 65,253 were produced.

In the third quarter, Canadian automakers assembled 231,055 cars, the highest third quarter since 1985 when 250,645 units were produced.

Third-quarter production rose 14.38 percent above the third quarter 1989 and fell 21.49 percent below the second quarter of 1990.

Canadian truck production in September was 59,018, 9.49 percent above the prior month and 27.94 percent below the year-ago month.

September truck production was the lowest for that month since 1987 when 148,473 units were produced.

Third-quarter Canadian truck production was 150,687, down 38.63 percent from the second quarter and down 20.99 percent from the year-ago quarter.

Car output climbs 8%; trucks dip

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. auto production last week rose 8.79 percent above the previous week and climbed 11.67 percent above the year-ago week.

Year-to-date, 4,791,410 cars have been produced, 10.54 percent below the 1989 total.

Last week, U.S. truckmakers were scheduled to build 80,625 units, 1.35 percent below the previous week but 25.71 percent ahead of the year-ago week.

So far this year, 3,080,902 trucks have been produced, 5.18 behind 1989's output.

Ford scheduled two shifts of Saturday overtime at the Wayne, Mich., car and Louisville, Ky., truck plants. They produce Ford Escort, Explorer and Ranger and Mazda Navajo.

General Motors scheduled Friday overtime at Janesville, Wis. The facility produces Chevrolet Cavaliers.

GM's Oklahoma City plant will be idle this week because of high inventories and slow sales. The plant produces Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera.

The Willow Run, Mich., car assembly plant is scheduled to be idle two more weeks. It closed Sept. 24 because of sluggish sales and high stocks of Chevrolet full-sized rear-drive wagons.

Chrysler Corp. scheduled two overtime shifts last Saturday at the Newark, Del., car facility.

Cars, trucks gain in Canada

Canadian automakers produced 26,487 cars last week, 7.98 percent above the previous week and 60.13 percent above the year-ago week.

Year-to-date, 800,293 cars have been assembled, 7.80 percent above the year-ago total.

Truckmakers' targeted production last week was 15,688, which was 0.92 percent above the prior week and 10.94 percent below the same week last year.

So far this year, 615,718 trucks have been assembled, 15.80 percent below the 1989 total.

General Motors announced a delay in the shutdown date for the Scarborough, Ontario, plant. The plant was scheduled to be closed in August 1992. The new target date is spring 1993. The plant produces Chevrolet and GMC full-sized vans.

All Canadian production facilities will be closed today in observance of Thanksgiving.

FROM PAGE 45

also announced a dealer incentive program for 1990 and 1991 Swift and Sidekick that runs through Dec. 3.

The 1990 Swift GT and its 1991 counterpart pay the dealer $700 and $500, respectively, for the first two units sold. Three or more units sold pay $500 additional per unit in any combination retroactive to the first sold.

Other 1990 Swift models pay $400 per unit for the first six sold and an additional $700 retroactive for seven or more sold. Sales of 11 or more units qualify for an additional $1,000 per unit retroactive to the first unit sold.

The sale of the first four 1990 and 1991 Suzuki Sidekicks earns $1,000 per unit, five to eight sales qualifies the dealer for an additional $500 per unit, non-retroactive, and sales of nine or more vehicles bring an additional $500 per unit retroactive.

American Isuzu Motors Inc. is offering dealer rebates of $1,500 on the 1990 Impulse and $1,700 on the 1990 pickup and Trooper. The program ends Dec. 31.

Subaru of America Inc. added the Legacy L sedan to the incentive list. Dealer rebates on Legacys are $1,500 to $2,500, and the program has been extended to Nov. 2. Subaru also increased the consumer rebate on the 1990 Loyale from $800-$1,200 to $800-$1,500.

Mazda Motor of America Inc. announced consumer incentives on 1990 vehicles of $750 on the 323-SE and Protege SE and LX models; $1,500 on 626; and $1,000 on MX-6.

The MPV has discounts of $886 and $1,246 on option packages.

Automakers spur auction growth with buyback of rentals

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Auto manufacturers are generating more used cars for their dealers than ever before.

Auction sources project that manufacturers will send more than one million vehicles to auctions for redistribution to dealers in 1990. Next year, the number is sure to climb.

And big increases in the number of low-mileage, daily-rental cars are pushing up the value of cars at auction, drawing far more dealers than before.

"Manufacturer volume is the name of the game," says Michael Richardson, president of Anglo American Auto Auctions in Nashville, Tenn., one of the big chains dominating the business. "It will be massive."

While 1989 was a record year for auctions, 1990 may not surpass it despite the increase in cars from manufacturers. Lower new-car sales have cut the number of trades being sent to auction by dealers.

General Motors is expected to send about 700,000 vehicles to auto auctions in calendar 1991, up from 500,000 this year, auction industry sources say. Ford Motor Co. will dispatch an estimated 400,000 vehicles to the auctions in 1991, up from 350,000 this year. Chrysler Corp. will send about 200,000, up from 178,000 this year.

Those include daily-rental fleet cars and employee vehicles.

AUTOMOTIVE NEWS / D. L. BURNAM

Chrysler still No. 3 in U.S. car sales

Chrysler Corp. is still No. 3 in car sales in the United States.

Last week, *Automotive News* incorrectly reported that Toyota Motor Sales U.S.A. Inc. had surpassed Chrysler in car sales for the 1990 model year.

In fact, Chrysler sold 855,548 cars, to Toyota's 765,241 (and Honda's 849,549). When light trucks are included, Chrysler leads Toyota by 697,164 units.

When Toyota reports sales figures, it includes in the car category three vehicles classified as trucks: the 4Runner and Land Cruiser sport-utilities and the Previa minivan. *Automotive News* normally subtracts those from the car total. But those trucks were incorrectly included in the model-year car total reported last week.

1990 MODEL YEAR SALES

	Cars	Trucks	Total
GM	3,263,541	1,633,675	4,897,216
Ford	1,945,241	1,383,168	3,328,409
Chrysler	855,548	884,031	1,739,579
Honda	849,549	—	849,549
Toyota	765,241	277,174	1,042,415

In addition, the sales of Toyota's Lexus Division were included twice in figures published last week.

Correct 1990 model-year figures for the five leading companies are in the accompanying chart. Corrected tables showing model-year car sales and truck sales by marketing unit, and a corrected chart showing total vehicle market share, appear on Page 53.

Japan's upturn in Germany viewed as colossal blunder

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT — A sharp jump in market share in the strong German market during August could cost Japan's carmakers enormously in long-term political capital and good will. The loss could more than offset any temporary competitive gain, according to industry analysts and executives.

Although the increase — a 5-point surge to a record 20.1 percent of German car sales — may well have been caused by special factors, analysts note that it comes against a backdrop of resurgent protectionist sentiment among European automakers.

At the recent Paris auto show, several European executives — including Carl Hahn, chairman of Volkswagen AG — endorsed a fiery call by Peugeot Group Chairman Jacques Calvet for a freeze on Japanese imports until at least 2003.

Calvet, who lambasted the European Commission for attempting to negotiate higher limits on Japanese imports and transplant production after 1992, also demanded free and open access to the Japanese market as a condition for opening Europe to more imports.

"The Calvet speech was an indication that he had the full support of the German carmakers," said Peter Schmidt, German specialist at Automotive Industry Data, a British research group. "He knew that if he was just sticking his neck out, he would not be taken seriously."

GM IN THE '90s:

Lineup benefits from spending blitz; Cadillac holds spot for 'Lexus fighter'

This is the fourth in a series on automakers' product plans for the 1990s.

By Michelle Krebs
SPECIAL CORRESPONDENT

General Motors will revamp virtually all its cars and the majority of its trucks at least once by the middle of the decade.

The company is winding up a spree in which it will spend more on product from 1988 through 1992 than in any previous five-year stretch. GM boasts that it has introduced 85 new models in the past five years.

During the 1990s, the company will devote nearly all its capital spending budget to product. Last May, then-Chairman Roger B. Smith said the automaker will revise or replace models repre-

Ford cries foul over Chevy ads; revives 'truck war'

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — John Vanderzee is fuming over claims that Chevrolet makes in its truck ads.

Vanderzee, Ford Division advertising manager, said Chevrolet's truck ads are rife with "half-truths, deceits and misrepresentations." He sent a letter saying just that to Candace M. Robbins, Chevrolet truck advertising manager.

He also told her to knock it off.

Robbins' response: No way.

Vanderzee publicized his feelings about Chevrolet's comparative truck ads last week at a media preview of the 1991 car and truck ad campaign for Ford Division, the No. 1 seller of light trucks.

At that session, Ford introduced comparative truck ads of its own pointing out what it says are the economic advantages of owning a full-sized Ford pickup truck over a comparable Chevrolet truck.

"For two years now, our sales have increased and the gap keeps widening" said Vanderzee. "We're the market leader. . . . We have to take them on when they are inaccurate and misleading. We asked them to withdraw or correct them."

Robbins said Chevrolet's claims are "absolutely true" and will not be modified.

Vanderzee took issue with three claims in Chevrolet ads:

- Chevrolet is America's favorite half-ton pickup truck. "We outsell them by so much it isn't even close," said Vanderzee. Robbins said the claim refers to Chevrolet's full-sized pickup, C-1500, which she said outsells Ford's F-150 two-wheel-drive model. Chevrolet also sells a K-1500 4wd half-ton pickup and Ford has an 4wd F-150.
- More truck owners switched to Chevrolet than any other truck. Vanderzee said while it is true that 1989 registration data indicate that 195,435 truck owners switched to

Ford's 1991 truck campaign points out "economic advantages" of owning a Ford over a comparable Chevrolet truck.

Toyota's Tercel target: post baby boomers

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Move over baby boomers. There's a youthful "new generation" out there, and Toyota Motor Sales U.S.A. Inc. believes its members are interested in ecology, new values and Toyota's 1991 Tercel.

That "new generation" is among the buyers Toyota will target with its new 1991 advertising campaign.

David E. Pelliccioni, Toyota national advertising manager, said he is confident that Toyota will keep its momentum and sell a million vehicles during a fiercely competitive 1991 model year. In the 1990 model year, the company sold 985,253 Toyota cars and trucks.

What with the budget problems facing the U.S. government, the threat of war in the Middle East and a new kid on the block — Saturn — "it's going to be a tough market," said Pelliccioni.

Pelliccioni said Toyota aims to sell 130,000 units of the newly designed subcombact 1991 Tercel, which now includes a four-door sedan.

The "new generation" of buyers, he said, are in their early to mid-20s, college educated, drug-free and are concerned about things such as recycling, pollution and getting value for their money.

Toyota has created television commercials just for them.

Toyota Tercel TV spots target a "new generation" of youthful buyers who are college educated, drug-free and concerned about recycling, pollution and getting value for their money.

One spot features a fresh-faced young woman who is sorting her trash for recycling. The woman notes that waste is out and "ecology . . . definitely in." She goes on to say they are going to save the world but for the time being, she'll "settle for saving a little money" by owning a Tercel.

Pelliccioni said: "There is a new generation out there. They worry about the environment. They achieve more quickly (than buyers of other entry-level cars). We want to talk to them in their language. We're talking new values."

Toyota, which has placed air bags in the Celica, MR2 and Supra, is "weaving" safety messages in other 1991 ads. One TV spot shows the deployment of an air bag while another depicts a woman driver who maneu-

LOYALTY BID: *Globally minded Japanese automakers struggle to increase authority of U.S. transplant work force*

By Mary Ann Mackary
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Setting up production in the United States was the easy part. Now the Japanese automakers are trying to take their globalization plans one step further and win the hearts and minds of the American workers.

The challenge for the Japanese industry in this decade, according to one manufacturing executive, is to adapt to an increasingly foreign work force. The phenomenal growth of the automakers in the last 10 years rested on the devoted service of their Japanese workers. That collective loyalty was a powerful force, the executive says, and the companies now must adapt to different conditions as they expand overseas.

Japanese auto plants in the United States are now up to 10 years old, but Americans still complain that they do not have much say in decisions. Company executives acknowledge that, ultimately, building a loyal work force means handing over decision-making authority to American managers so they feel they are more than just cogs in a foreign machine. How and when the Japanese firms open up is the issue.

Nissan Motor Co. Ltd. relies more on American workers than any other Japanese auto company. It has long had Americans running production in the United States and now has an American in charge of sales.

Honda Motor Co. Ltd. says it will take more time to train American managers in the Honda Way before giving them top positions, but Honda says it is doing more than Nissan to transfer technology. Toyota Motor Corp. also says it is training a staff to take over, but it is working out a consensus on the best way to approach the matter.

Until just six years ago, Toyota had nothing but complete knocked-down assembly overseas, and all decision-making was made in Toyota City, says Kan Higashi, president of New United Motor Manufacturing Inc. Now, with two plants in the United States and one under way in Britain, conditions have changed completely: Toyota can no longer rely on total decision making in Japan.

"Toyota management here recognizes that that is dangerous," Higashi says. The com-

NUMMI President Kan Higashi says the company "must promote local people."

Bivouac victim of RV market dive

Ford's No. 1 converter shutters facility after credit denials

By Joseph Bohn
TRUCK EDITOR

Bivouac Industries, Ford Motor Co.'s No. 1 van converter last year and a major commercial vehicle producer, closed its operations Oct. 5, while seeking further credit extensions from banks.

The market downturn has taken its toll on many RV firms.

Some — such as Kustom Koncepts Inc. of Louisville, Ky.; Aviator Van Conversions of Elkhart, Ind.; and Zimmer Corp. of Boca Raton, Fla. — have dropped out entirely.

Others, like Rockwood Inc. of Goshen, Ind., and Lamax Corp. of Elkhart, have been sold. Van American Inc./Cobra of Goshen purchased Rockwood. Jeffrey Chupp, owner of Chupp & Sons Inc. in Elkhart, purchased LaMax.

Chevrolet now has about 160 consignment pool accounts, down from about 180 earlier this year, according to sources in Elkhart.

Ford, with about 60 accounts, has to replace some companies that dropped out even while it is trying to expand the overall number of companies in its pool system, Elkhart sources said. Ford plans to have almost all of its vans go through authorized pool accounts by next fall.

Scott Chapman, Bivouac founder and president, said the company has been trying to put a restructuring plan together.

Bivouac's primary lender, Den norske Bank of New York, and Ameritrust National Bank of Elkhart, Ind., have been battling each other over whether to pump more money into the firm.

Ironically, major lender Den norske, has been willing to help support Bivouac; while the smaller Ameritrust has balked at putting up any more cash, Chapman said.

The banks themselves declined comment.

Chapman said, "We want to take care of our customers. That's my No. 1 concern."

Still, the firm's revival will be difficult because of spreading publicity about its plight.

Bivouac's problems began publicly at 2:55 p.m. Oct. 5, when management summoned employees to a building behind the firm's production facility in Vandalia, Mich., to tell them it was closing.

"We stood around for about 20 minutes making jokes about the place closing down and not getting paid," said Verlin Williams, a production line group leader and 10-year veteran of the firm.

"Then Scott came in, and somebody asked, 'Do we sign up for unemployment and forget about coming back?' And he said 'Yes.' They told us they couldn't even make payroll," Williams added.

The following Tuesday, with incoming accounts, the company did pay employees for their last two weeks of work.

Bivouac's troubles began last year when it had to heavily discount leftover 1989 model conversions.

Chapman tried new marketing concepts to pump business up.

He created specific, guaranteed franchise areas for dealers, provided advertising and marketing support and even helped underwrite dealers' floorplanning for Bivouac products.

Bivouac's financial problems only worsened, though, with the weakening market.

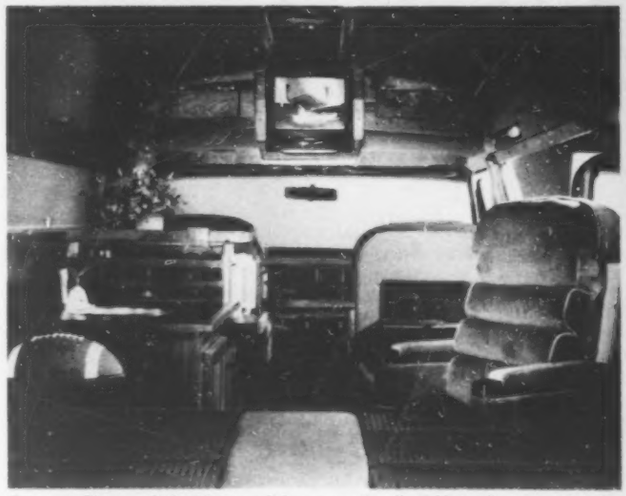
Chapman's efforts to save the firm earned the respect of some major dealers such as Fred Ricart, president of Ricart Ford and Ricart Vanland in Columbus, Ohio.

"All the marketing efforts made by Scott Chapman were necessary and carried out to the highest letter of trying to do good business," Ricart said.

"Scott did a phenomenal job. He literally went door to door to the dealers to keep the product alive. He created marketing and merchandising ideas far beyond what you'd expect from any van company. If there were any financial problems associated with that, his additional efforts were commendable."

Ricart sold about 1,700 to 1,800 van conversions during the 1990 model year, and handles products from 19 different van converters. His van conversion sales are down from 2,500 units a year earlier.

At its peak, Bivouac converted almost 5,000 vans a year, but that has dwindled to an annualized rate of about 2,000 a year, according to Williams.



For now, Bivouac Industries won't be converting Ford Motor Co. vans like the one above. The van converter has closed its doors.

The company also operated Bivouac Commercial Vehicles in Elkhart, which produced parcel delivery vans. It had been seeking to expand its commercial vehicle operations with new products and closer ties to importers like Mitsubishi Fuso Truck of America Inc. and Isuzu Truck of America Inc., according to Mike Spencer, a former director of sales and marketing for Bivouac Commercial.

To cut overhead, Bivouac moved commercial operations from Elkhart and consolidated them with van conversions in Vandalia earlier this year.

Some competitors, like Richard A. Newberry, Starcraft Corp.'s chief financial officer, see the shakeout of converters like Bivouac providing "greater opportunities for us (survivors)."

Starcraft has its own financial problems, but has been getting support from General Motors, its bank, trade creditors and dealers while it works out a new deal to cut interest debt payments with its bondholders. Newberry said.

Still, other competitors feel that the publicity generated by such financial problems will drive already gun-shy dealers to be even more conservative in ordering new van conversion units.

European operations help GM, Ford show profit

By Liz Pinto
AUTOMOTIVE NEWS STAFF REPORTER

Overseas operations kept General Motors and Ford Motor Co. in the black for the third quarter while Chrysler Corp., which relies almost completely on North America, will report a sizable loss, automotive analysts predict.

Ford and GM experienced problems overseas with strikes and model changeovers, but their European operations still earned profits, analysts say. Meanwhile, excessive incentives continue to depress profits in the wildly competitive North American market.

Analysts expect that Ford and GM will report third-quarter profits about half of last year's, while Chrysler will report a loss of $250 million to $280 million.

The automakers will report their third-quarter results in late October.

Overseas operations for Ford and GM are not as strong as last year, according to analyst Wendy Beale Needham of Smith Barney, Harris Upham & Co. of New York. But the two companies are still making money overseas — "something they did not do in the U.S. in the third quarter."

Needham says third-quarter incentives for domestic automakers were about the same as in the second quarter: GM and Chrysler offered about $1,200 per vehicle, and Ford about $1,050. Those incentives were up almost 40 percent from a year ago, Needham says.

In May, Ford Chairman Harold Poling said the company is spending $4 billion annually on sales incentives.

Analysts predict that:

- GM's third-quarter net profit dropped 40 to 55 percent compared to 1989's third-quarter net income of $517 million.
- Ford's earnings tumbled 50 to 60 percent from last year's $477 million.
- Chrysler, which had net income of $331 million in the year-ago period helped by the sale of 44.5 percent of its stock in Mitsubishi Motors Corp., will report a loss of $250 million to $280 million.

Chrysler has been saying it will show a third-quarter loss this year because it lost production of 60,000 minivans due to model changeovers at two assembly plants.

Analysts don't expect the Persian Gulf situation and rising gasoline prices to have a marked impact on fourth-quarter sales.

"Overall consumer demand is holding up reasonably well," said analyst Ron Glantz of Dean Witter Reynolds of San Francisco, "which is amazing considering the media is forecasting the end of the world."

Analysts are predicting increased profits for the Big 3 in the fourth quarter, estimating that GM will earn as much as $1 billion, Ford around $700 million and Chrysler more than $80 million, all up considerably from the fourth quarter of 1989.

Needham anticipates that for 1990, each of the Big 3 will show profits below the depressed 1989 figures, with GM earning approximately $2.9 billion; Ford, $1.68 billion; and Chrysler, $99 million.

Ford demands changes at Jaguar as wage talks open

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Ford Motor Co.'s Jaguar unit, due to open contract talks with its 11,000 production workers tomorrow, has demanded radical changes in work practices and shop-floor attitudes as a prerequisite to any salary increase.

Officials at Ford, which acquired the luxury car maker last year, have frequently voiced dismay at what they call antiquated production methods and work habits at Jaguar. By focusing on the costly, deep-rooted practices, the contract talks are being viewed as a bellwether of Ford's ability to overlay its management style on Jaguar workers and proceed with a major capital investment program.

In a recent letter to hourly workers, Jaguar warned:

"Without acceptance of the major changes needed to improve productivity, employees cannot expect to do any better than last time. However, if agreement can be reached on the package of working practice changes, further progress can be made."

Jaguar workers, traditionally the British auto industry's best paid, received increases of 4.2 percent and 4 percent in the last two years, raising them to an average of about £230 ($453) weekly, compared with an average of £218 ($429) for Ford of England workers.

But union leaders are insisting that Jaguar match Ford of England's most recent contract, which keeps workers 2.5 percentage points above Britain's rate of inflation, now running at about 10.5 percent a year.

Among the biggest changes Ford is demanding from Jaguar workers is an end to so-called "quota-working," whereby an individual stops working once he fulfills an assigned output quota. Instead, Ford will demand full-shift output from every worker.

Also targeted are traditional restrictions on overtime and a policy of time-in-grade advancement.

Ford also is seeking a commitment to reduce work stoppages, which resulted in 22,000 hours of lost work during the first six months of 1990. During that period, there were no official disputes.

Management also wants workers to agree to frequent and regular measurement of work and to commit themselves to "never-ending process improvement."

It also wants employees to take individual responsibility for rectifying quality problems.

Jaguar has reminded its unions that the company's financial position is worse than it was two years ago, when the last contract was negotiated and that production must become more efficient to pay for its proposed new model line.

Jaguar lost money in 1989, will post another loss this year and is not expected to break even until 1991. Its financial position has been made worse this year by the strengthening of the pound against the dollar, which makes its cars more expensive in the key U.S. market.

Serving the customer

Ford center handles nationwide queries; goal is speedy assistance on first call

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. is handling customer phone calls from every state at one location — its new Customer Assistance Center here.

The consolidation was finalized when the last three of Ford Parts and Service Division's 28 district customer service operations were brought on line at the new center.

The center has a national toll-free phone number: 1-800-392-3673. All customer calls and letters that previously went to district offices now come to the center and are handled by a team of Ford representatives, according to Lee Miskowski, general manager of the division.

"Our goal is 95 percent accessibility on the first call for customers who call the center," said Al White, owner relations and operations manager of Ford Parts and Service.

"Gone forever are the days when customers would call, get a ring, keep waiting and never get an answer," White said. "The move to centralization with one toll-free phone number for customers across the country was done for only one reason — to improve customer satisfaction."

The phase-in began last March, and early results are encouraging, White said.

On a typical day, he said, the center receives approximately 5,500 phone calls and 1,000 letters, many coming from owners of the more than 32 million Ford and Lincoln-Mercury products on the road.

About 60 percent of the contacts are from customers seeking information about Ford or a Ford vehicle they own or from persons thinking of purchasing a Ford product.

The remaining 40 percent include concerns about vehicles, parts availability and dealer service, White said.

He said the center has a data base that includes a five-year owner contact history and more than 5,500 documents of basic vehicle information.

The center employs 200, including 110 customer service representatives who handle incoming phone calls and a 35-member correspondence team who answer every customer letter, White said. The center is expected to handle more than one million calls a year.

White said service representatives are college graduates and undergo four weeks of training before taking their first phone call. Training includes a history of Ford, basic automotive systems, warranty policy, computer training, interpersonal skills and stress management, he said.

Lee Miskowski, general manager of Ford Parts and Service Division, handles a customer's phone call during the opening of the Ford Customer Assistance Center.

Nerlinger to retire; Roland appointed ASIA president

CHICAGO — David R. Roland will become the third president of the Automotive Service Industry Association Jan. 1.

He will succeed John W. Nerlinger, who will retire after 27 years of ASIA service, 17 of them as president.

Roland

Nerlinger

Roland, who joined the ASIA staff last January as executive vice president, became chief operating officer in April and has been directing the association's day-to-day operations since that time. Before joining ASIA, Roland was vice president of the American Association of Equipment Lessors for four years.

Nissan hopes program helps dealers improve customer satisfaction ratings

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has established a new dealer program to help improve customer satisfaction ratings.

According to Nissan's Information Systems Division, the program, called Nissan Dealer Systems Steering Committee, will enable dealers to increase the effectiveness of Nissan's customer satisfaction and service programs through the use of the Nissan Datanet Dealer Communications Systems.

Tony Lucente, manager of dealers services, said a panel of six dealership managers responsible for the operation and implementation of Datanet in their dealerships will advise the company on the network. The committee will meet twice a year.

The dealership managers are from: ABC Nissan in Phoenix; George Grubbs Nissan in Bedford, Texas; Miller Nissan in Van Nuys, Calif.; Daland Nissan in Millbrae, Calif.; Lumberton Nissan in Lumberton, N.C.; and Martens Nissan in Marlow Heights, Md.

The Datanet system, established in 1982, is a communications link between Nissan and its dealers. The system was expanded in 1988 to allow dealers direct access to Nissan's main computer.

"By using the dealer's input, we will be able to utilize the most pertinent information available with Datanet," Lucente said. "Our goal is to become number one in customer satisfaction. The committee gives us the input necessary to design systems that give Nissan a competitive edge."

A vehicle's service history, parts invoices and new product information are among the services available with Datanet. The system also permits dealers to search for parts at other dealerships to speed repairs.

Steering committee member Tom Rose, executive manager of Lumberton Nissan and who has been in the auto business for more than 25 years, said Datanet has been a "giant leap" in upgrading communications between the dealership and Nissan and should be an even better tool with the steering committee's input.

"Every manufacturer has a terrific computer system developed by a guy with a master's degree who has never been in a dealership," Rose said.

Rose predicted simplification of the system, especially in locating parts and new vehicles, will enhance dealers' chances of improving their customer satisfaction ratings.

Another member of the committee, Greg Doeden, parts manager for ABC Nissan, said, "We are very excited to have a chance to offer our input on the Datanet system. It will definitely improve our ability to serve the customer in parts, service and sales departments."

Honda offers awards for shop staff

GARDENA, Calif. — A national recognition program for service advisers and technicians at its dealerships in the United States has been announced by Honda Automobile Division of American Honda Motor Co. Inc.

According to Linda Pemberton of Honda's service training department, the Honda Service Professionals Program is designed to improve customer service at dealerships. The program provides career motivation to the advisers and technicians through awards based on the individual's length of time at the dealership, participation in training programs, skill level and performance.

According to Honda, dealerships can enroll in the program at any time during the year for $315.

Three levels of recognition — bronze, silver and gold — have been established for advisers and technicians. The bronze and silver awards are one-time citations — once participants reach that level, they keep it, while the gold level achievement must be earned each year.

Personnel attaining the bronze level will receive gifts, including an achievement certificate, lapel pin or uniform patch and a coffee mug or baseball cap. In addition to the bronze gifts, silver achievers will receive a jacket, along with a certificate recognizing their achievements.

In addition to receiving a certificate and commemorative ring, gold achievers are eligible for the Top Tech and Top Adviser Contests held in Honda's zones. The contest gives the top 20 technicians and advisers in each zone an opportunity to demonstrate their skills and earn an expense-paid trip to a National Awards Banquet.

Shop volume rises for 2nd month in a row

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

New-car dealers' service and parts business increased for the second consecutive month in August.

According to the Automotive News Service Index, shop volume in August amounted to 105.6 percent of the business reported in August 1989. July's volume was 109.3 percent of the business recorded in the year-earlier month.

Service and parts business for dealers in January-August 1990 was 7.3 percent above the similar period in 1989.

Of the indicators used in the index, total labor sales (customer paid and warranty) recorded the biggest gain in August, topping the year-ago volume by 14.6 percent, Next in line was shop parts sales for customer and warranty repairs, up 9.8 percent.

Gross profit on all labor parts and accessories sales — the most important indicator from the dealers' viewpoint — was 7.7 percent above last year's figure, while sales of all parts and accessories were 2.4 percent above the volume in the same month the year before.

The only indicator that did not register an increase in August was repair orders written. The average number of orders written in new-car dealerships was off 4.5 percent from the year-earlier total, the survey found.

For the first eight months of 1990, the indicators lined up this way: Total labor sales, up 8.4 percent; shop parts sales, up 7.4 percent; sales of all parts and accessories, up 6.5 percent; gross profits, up 6.2 percent; and repair orders written, up 0.2 percent.

Figures used in the Service Index are averages complied from reports on shop operations from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
105.6★

	Aug. '90 vs. Aug. '89	Jan.-Aug. '90 vs. Jan.-Aug. '89
Gross Profit on All Labor and P&A Sales	+ 7.7%	+ 6.2%
Repair Orders Written	– 4.5%	+ 0.2%
Total Labor Sales (Customer & Warranty)	+14.6%	+ 8.4%
Shop Parts Sales (Customer & Warranty)	+ 9.8%	+ 7.4%
Sales of All P&A	+ 2.4%	+ 6.5%

★ Survey by Automotive News shows that dealers' service and parts business in August 1990 was 105.6 percent of business in August 1989. Service business in the first 8 months of 1990 was 107.3 percent of business in the corresponding period in 1989.

*Mazda declined to furnish a breakout of North American built and imported car sales.

Fleet buyers hold off in Canada

Vehicle sales in Canada declined by 18.9 percent compared to September 1989, despite incentives, as fleet buyers delayed purchases in anticipation of a Jan. 1 change in tax laws.

Michael Erdman, marketing vice president of GM of Canada, said: "Fleet sales represent a significant segment of our business in Canada, and things here are extremely slow while those customers await the outcome" of the tax legislation.

Cars dipped 16.4 percent and trucks were off 24.3 percent.

North American car sales fell 21.0 percent from the previous year. Three manufacturers reported gains: Honda, 93.5 percent; Volvo, 39.5 percent; and Toyota, 2.4 percent.

Honda's combined car sales remained above Chrysler's for the third month in a row.

In North American truck sales, Ford reported a 9.0 percent decrease while GM lost 32.9 percent and Chrysler 39.0 percent.

Importers to Canada reported decreases of 5.6 percent in car sales and 8.3 percent in truck sales for September.

So far this year, total sales in Canada are 100,347 units, or 8.8 percent behind 1989's total.

— Karen Detkowski and Bill Vance

Ford dealer aides get break

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division has announced a program in which dealership employees can purchase a vehicle at the same price as a Ford vendor employee.

The program, which runs through Sept. 30, 1991, involves 1990 and 1991 Ford Division vehicles. Vehicles that have been used for driver education, dealer demonstrators and service loaners and those purchased under the college graduate or Red Carpet lease plans are not eligible for the discount.

Dealership employees can purchase Ford Division vehicles from their dealerships at or below the dealer invoice prices less holdback and finance charges plus a dealer commission payment from the employee of 4 percent. The "at or below invoice" is up to the dealer.

In addition, Ford will pay the dealership a 4 percent commission on the dealer invoice price less holdback, finance charges and advertising charges.

Dealers are permitted to waive some of all of the employee payment to equal any existing employee purchase program. Dealers interviewed by *Automotive News* last week said that in the past, their employees paid $100 over dealer cost (including holdback, advertising and finance charges).

To be eligible for the program, a person must be employed at the dealership for a minimum of six months. The employee can purchase only two vehicles under the program. They must be registered in the employee's name and the title for the vehicle must be held by the employee for six months from the date of sale.

DEALING WITH DEALERS

BEGINNINGS

Mark Ford-Mercury has opened in New Milford, Conn.

Camelback BMW-Porsche-Audi, Phoenix, has moved its BMW line to a separate location in Phoenix. The BMW store is called **Classic BMW**.

TRANSITIONS

Bert Pitre, Pitre Automotive Group, Scottsdale, Ariz., has acquired **Ed Moses Chrysler-Plymouth Inc.**, Scottsdale.

CITIZENSHIP

Executive Honda, Wallingford, Conn., hosted a promotion benefiting an adolescent substance abuse program. A local radio personality, entombed in a block of ice, was thawed out as visitors made donations to the abuse program.

Houser Isuzu, Springfield, Mass., hosted a live radio broadcast to benefit the Ronald McDonald House in Springfield. Listeners were invited to meet WAQY-FM personalities and make a donation. The Ronald McDonald House is a haven for out of town families visiting hospitalized children.

Dick Huvaere, Huvaere Group, Richmond, Mich., has announced that his dealerships will be collecting toys for distribution to underprivileged children.

The **Central Florida Auto Dealers Association** has donated a 1990 Chevrolet Lumina minivan to the Medical Eye Bank of Florida.

25 years for Sharp

James H. Sharp, Sharp Chevrolet-Pontiac-Cadillac Inc., Watertown, S.D., left, receives a 25-year-dealer plaque from J. Keith Meisel, Chevrolet's Minneapolis branch account manager.

New Mexico leaders

The 1990-1991 New Mexico Automotive Dealers Association officers are, standing: Ray Berube, president; Charley Smith, Watson Truck and Supply, Hobbs, secretary; Stuart Rappaport, Perfection Honda, Albuquerque, treasurer; seated: Bob Turner, Bob Turner's Ford Country, Albuquerque, vice chairman; Louis Sisbarro, Sisbarro Buick-Pontiac-GMC, Las Cruces, chairman.

Golden Doster

Stokely Doster, left, Doster Motor Co. of Chattanooga, Tenn., receives a 50-year-dealer plaque from Harold Feder, Lincoln-Mercury's Atlanta district sales manager.

300SE ruled $48,115 lemon

Mercedes-Benz of North America Inc. has been ordered to pay $48,115 to Florida resident Anthony D. Romeo for a 1989 Mercedes 300SE declared a "lemon" by the state-run arbitration board.

The problem was a "rubbing, creaking sound" in the rear when turning the steering wheel and applying brakes in either forward or reverse gears. The selling dealer, Regency Autohaus Inc. in Naples, had tried unsuccessfully to fix the problem six times.

Mercedes-Benz rejected an offer to take one final shot at repairing the noise, citing its expert's statement that brake-pad rubbing against the disk brakes was a "normal characteristic" of all 1989 300SEs.

Arbitration panel members who drove and parked Romeo's car said the noise problem substantially impaired its value.

Europeans import more, Asians fewer

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Import sales in September fell 15 percent overall from a year earlier, but sales of European autos rose 3.5 percent.

September also saw the first monthly sales of such new nameplates as the BMW 850i, the Hyundai Scoupe and the Infiniti G20, plus mushrooming sales for other recently introduced models.

Volkswagen AG led the European pack, with September sales of 11,363, up 16.7 percent for the month. Volkswagen's year-to-date sales were up 2.5 percent, to 103,062 units.

AB Volvo also climbed into the plus column for the month on sales of 8,119, up 1.0 percent over the year-ago month. Monthly sales of the 760 model gained 32.2 percent compared to September 1989.

However, Volvo's year-to-date sales of 73,606 were still 8.9 percent below last year.

BMW also had a strong September, as each of its basic body styles — 3, 5 and 7 series — posted monthly gains. At 5,148 units, BMW was up 17 percent for the month, although nine-month sales were down 6.6 percent. BMW said it sold one 850i in September. The car retails for $73,600.

Japanese imports fell 18.8 percent for the month, to 126,558 units. For the year to date, their import sales are off 10 percent, but domestic sales increases give the Japanese an overall gain.

Honda badge imports were down 21.1 percent, to 13,295, and Acura, which sold 11,168 for the month, off 7 percent. Acura sales included 220 of its new NSX model.

Lexus, with a year of sales figures under its belt for the first time, reported September sales of 5,268, up 15.7 percent from its launch month a year earlier. Sales of the less-expensive ES250, which hasn't caught on as fast as the top-of-the-line LS400, were up 50.9 percent for the month.

Infiniti sold 2,046 cars for the month, including 282 of its new entry-level G20.

Toyota imports were down 28.8 percent in September, to 24,743, while nine-month sales were down 19.7 percent, to 278,753.

All Toyota model lines declined except the Celica and the MR2, which recently saw the introduction of an all-new version earlier this year.

Nissan September import sales were down 20.6 percent, to 27,879.

AUCTIONS

FROM PAGE 1

More dealers attend

The lion's share are so-called "program" or buyback cars. Ford and GM sell those vehicles to daily rental companies, then repurchase them a few months later and sell them to franchised dealers through the auction network.

Unlike Ford and GM, Chrysler doesn't repurchase the vehicles outright. The daily rental companies sell them to Chrysler dealers at auctions, and if they fail to sell for a predetermined depreciated price, Chrysler pays the difference to the rental companies.

Foreign automakers such as Toyota and Volkswagen are raising their stakes in the program-car market, too.

The nearly new cars attract new-car dealers, who are attending auto auctions in record numbers. For example, GM reports that 76 percent of its dealers now attend auctions regularly.

For auctions, the number of program cars remarketed by manufacturers has been a boon.

Estimates of total auction vehicle sales in 1989 range from 5.25 million on registrations of 8.25 million to 6.6 million on registrations of 10 million. Registrations are the number of vehicles consigned for sale.

In 1988, industry officials estimated that 3.6 million vehicles were sold on registrations of about six million.

A record 1989

The National Auto Auction Association includes 215 auto auctions. The industry does not compile sales statistics.

All told, 1989 was a record year for auto auctions, with the three largest chains selling an estimated 3.3 million vehicles:

- Manheim Auctions, based in Atlanta, sold about 1.3 million vehicles, according to industry sources.
- GE Capital Auto Auctions, based in Barrington, Ill., sold about one million.
- Anglo American Auto Auctions sold about one million.

Stephen A. McNeely, president of GE Capital Auto Auctions, said the average selling price of a program vehicle has risen to $10,500.

Auction officials say daily rental firms will continue to turn over their fleets quickly. In addition, GM and Ford have offered to repurchase all their program cars in the 1991 model year, up from about 75 percent last year. The result will be even more program cars at the auctions.

Program cars do pose one problem for auctions and manufacturers because daily rentals are seasonal. Fleet sizes rise and ebb on vacation cycles. Most of the program cars come from Florida and California — hot vacation spots.

The rental companies have huge numbers of vehicles to dispose of early and late in the year.

Says Richardson: "Something should be done to smooth out incidents of disposal. Rental companies dispose of vehicles when they want to. And that is not always in the best interests of the manufacturer."

Availability grows

Although program cars are driving the industry's growth, they are only one segment of it. Others include repossessions from financial institutions, off-lease vehicles, salvage vehicles and dealer consignment vehicles. Fleet vehicles are those purchased by corporations, rental firms and others.

McNeely projects that the auction industry will grow 6 percent in annual unit sales through 1993. Part of that will come from the manufacturers and financial institutions.

He says the number of vehicles available to auctions is growing another 3 percent.

"The number of vehicles with the potential of crossing the market is growing," he says. "Auctions are gaining ground in the number of cars available from the entire wholesale market."

Franchised dealers sold an estimated 14.7 million used vehicles in 1989, about the same number as the new vehicles they sold, according to the National Automobile Dealers Association. About 72 percent came from trade-ins and 20 percent from auto auctions.

Both McNeely and Richardson expect dealer consignments at their auctions to grow 10 percent or more this year. Vehicles consigned by dealers are trades or those that have stayed on a dealer's lot for a long time.

Fleet and lease sales appear to be the only flat segment of the industry because companies are moving toward paying for more employee-owned vehicles.

Independents' choices

Larry Tribble, owner of Southern Auto Auction in East Windsor, Conn., says he is experiencing a shortage of used cars because new-car sales are down and dealers are bringing fewer trade-ins to the auctions.

Tribble is president of ServNet, an advertising and marketing consortium of independent auctions that was formed to compete more effectively with the chains.

As an independent, Tribble and others like him face several challenges, including whether to go after the factory business or stick with dealer consignment and fleet and lease vehicles. The chains sell most of the program vehicles, although some larger independent auctions also hold factory sales.

"With lower-than-average new-car sales, the number of trade-ins is reduced and it is hard to maintain growth," Tribble says. "If the independents are not into factory sales, should they make the investment needed to get into it?"

For an independent, that could be costly. Unlike dealer consignment vehicles, factory vehicles aren't always delivered. They are marshaled at locations around the country by the manufacturers for disposition.

Moreover, auctions that conduct factory sales need huge amounts of land for storage plus reconditioning facilities and computers.

Tribble also says independents who have been selling cars for the daily rental-car companies will lose that business. Until this model year, manufacturer buyback programs with the daily rental companies included a certain number, typically 25 percent, of "at risk" vehicles, which the rental companies had to dispose of themselves.

Now that GM and Ford are offering to repurchase 100 percent of the vehicles they sell to the daily rental companies, independent auction owners will lose that business unless they get in on the manufacturer programs.

Tribble contends that lower new-car sales will prevent 1990 from being a record year, as 1989 was.

Rental cars raise sales for Top 10 auctions

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The nation's Top 10 auto auctions sold 711,000 vehicles worth $5.3 billion in 1989, up from 706,000 units valued at $4.7 billion a year earlier.

The value of the vehicles has risen because auctions are getting more low-mileage, daily-rental vehicles from the manufacturers.

The growth of the biggest auctions is illustrated by the fact that two auctions selling more than 80,000 vehicles each made last year's *Automotive News* Top 10 list, but failed to make it this year even though they sold more vehicles in 1989 than 1988. *Automotive News* ranks auctions by the value of vehicles sold, not units. All told, 1989 was a record year for auto auctions.

Automotive News began surveying auto auctions in 1987.

During 1986, the nation's Top 10 auctions sold 545,000 vehicles valued at $3.4 billion. The totals have risen every year since.

Two major categories of auction cars — daily rental or "program cars" and dealer consignment vehicles — increased strongly in 1989, industry officials say. Fleet and lease vehicles were flat. Driven by the growing number of program vehicles, the average vehicle selling price at the top 10 auctions in 1989 rose to $7,547, compared with $6,828 in 1988.

Florida Auto Auction of Orlando, owned by Manheim, was the nation's top seller in value of vehicles sold last year. In just a single day in July, the gargantuan auction registered 9,583 vehicles and sold 6,821 — 71 percent. Gross sales that day were $69 million, for an average price per vehicle of $10,130. Florida Auto Auction operates 15 selling lanes on 140 acres.

In 1989 Florida Auto Auction had revenues of about $810 million on sales of 94,000 vehicles, compared with $741.6 million on sales of 84,968 units in 1988.

The second largest-volume auto auction in 1989 was Southern California Auto Auction, in Fontana, Calif. Owned by GE Capital Auto Auctions, it had sales of $718 million on 95,676 units, a big jump from $519 million and 89,547 units in 1988.

Major independents

Although independent auctions failed to make the Top 10 best-seller list, many had big sales in 1989:

- **Southern Auto Auction,** East Windsor, Conn., $420 million, 71,000 units
- **Auto Dealers Exchange,** Indianapolis, $417 million, 68,400 vehicles
- **Indianapolis Auto Auction,** Indianapolis, $388 million, 74,000 vehicles.

INSTANT INFO

Computers report vehicle prices, volume at several major chains

The number and prices of vehicles going through auctions will be tracked for the first time by computer under an agreement between the National Automobile Dealers Association and the National Auto Auction Association.

Phase One of DataNet, an electronic sales reporting network for wholesale car and truck auctions, went on line in September. It enables the *NADA Official Used Car Guide* to publish more current used-car prices.

"DataNet will provide the industry with a more thorough and accurate understanding of the used-car market," said Bob Brest of the NADA Guide Book committee.

Wholesale auto auctions are an important source for appraising used vehicles.

The system eventually will include day-of-sale results for about 200 auctions nationwide, covering several million transactions annually.

NADA is now collecting data from the three largest auction chains — GE Capital Auto Auctions, Anglo American Auto Auctions and Manheim Auctions — and several major independent auctions.

Sales reports also are beginning to come on line from other auctions.

Once it is fully operational, DataNet will be able to provide various segments of the industry with customized reports about the used-car market.

CHRYSLER

FROM PAGE 2

fully accounted — lose money on small and midsize cars," the study concluded.

Coping with the pension enhancements might be particularly difficult for Chrysler, Glantz said. "It's a call on resources that Chrysler can ill afford."

Chrysler's annual report said that all of its pension plans had $5.1 billion in assets on Dec. 31, 1989, and $7.8 billion in accumulated benefits, leaving the pension plans underfunded by a total of $2.7 billion.

Chrysler also has an older work force than Ford or GM, and a higher ratio of retired to active workers. In 1989, Chrysler had a total of 88,542 active employees and 87,635 retirees.

The transplants, which are relatively new operations with young workers, have virtually no retirees and limited pension funding needs.

Iacocca talked with reporters after meeting with the union.

"I gave them the state of the union, the state of the company message," Iacocca said. "I didn't plead poverty, and I didn't bargain. That's not my role."

Iacocca did not identify the areas under discussion, but Chrysler officials have proposed that traditional health care plans be eliminated and replaced with managed health care plans such as health maintenance organizations.

Chrysler also proposed giving workers ownership in the company and compensating workers for improvements at individual plants, proposals shunned by the union.

For the six months ended June 30, Chrysler's earnings were $251 million, down from $692 million a year ago. Chrysler is expected to lose as much as $280 million in this year's third quarter.

Stan Marshall, UAW vice president and head of the union's Chrysler department, said the union probably would set a strike deadline with Chrysler after the Ford agreement is ratified. The union has $750 million in its strike fund reserves.

Automotive News Staff Reporter Mary Connelly contributed to this report.

JEEP CJ

FROM PAGE 2

Exchange Commission, Chrysler estimated that pending CJ lawsuits seek $213 million in compensation and $295 million in punitive damages.

The Institute for Injury Reduction, Public Citizen and the Center for Auto Safety had sought the CJ probe and recall, citing an alleged rollover tendency, a defective shackle pin in the suspension that could increase the likelihood of a rollover, and lack of occupant protection including an adequate roll bar. The groups also claimed AMC covered up knowledge of a defect.

NHTSA said analysis indicated that "while the predicted rollover propensity of the CJ is slightly higher than the average for all utility vehicles, the CJ does not stand out from its peers to an extent that warrants further investigation."

NHTSA cautioned that its decision did not mean that the agency had determined that the CJ is "safe" or that drivers should not worry about rollover.

"All light utility vehicles are much more likely to roll over than passenger cars," the agency said.

NHTSA also said that no evidence indicates the vehicle's shackle pin and rollbar are defective.

UCK WAR

owners switched to Chevrolet is "true."

● More people are winning with Chevrolet trucks. "We haven't found out what they're winning. They have no basis for the claim," said Vanderzee.

bins said the line is part of rall theme that is used with olet cars and trucks to com- nt the "Heartbeat of Amer- gline.

derzee said the claims are ding because Ford is soundly g Chevrolet in truck sales. sold 1,383,168 light trucks red to Chevrolet's 1,257,139 1990 model year.

vision spots for Ford's full- pickup claim that Ford "puts in the red and you in the " because Ford trucks are economical to own and oper- an comparable Chevrolet s. The ads also say Ford have a higher resale value Chevrolet trucks five years urchase.

derzee said Ford's claims are based on an independent study by IntelliChoice, a San Jose, Calif., research firm that produces annual car and truck cost guides.

Vanderzee said the comparisons in Ford's ads are to "provide relevant facts."

The Ford-Chevrolet advertising "truck war" has been raging since 1987. Last year, Ford said Chevrolet misrepresented Ford trucks by alleging in an ad that Ranger owners must "back up 10 feet" to shift out of 4wd, something Chevrolet said was not necessary in its S10.

In another ad earlier this year, Chevrolet boasted that it was the sales leader in rural Ford County, Ill. In both instances, Ford claimed the facts were distorted.

A few months ago, Ford said it would stop naming competitors in its truck ads. But its dealers, stinging from comparisons in Chevrolet's truck ads, encouraged Ford to jump back into the fray.

Vanderzee said Ford has not decided how it will handle the most recent Chevrolet claims if Chevrolet refuses to drop them. He said Ford might ask the Better Business Bureau and/or the television networks to review the ads for accuracy. He said Ford is "not considering a lawsuit."

Ford also said it will keep its "Have you driven a Ford lately" themeline for its 1991 divisional car advertising.

SUZUKI

FROM PAGE 52

4wd capabilities.

The embattled Samurai will get just the opposite treatment. Two 2wd versions were introduced for 1991, and only one 4wd version remains. The price of the base model was slashed $2,000, to $5,999.

With the addition of the four-door Sidekick, Suzuki's three-product line adds another branch. There are three versions of the Swift, two hatchbacks and one sedan; rwd and 4wd Samurais; and two body styles for the Sidekick.

Gary Anderson, national marketing director, says expansion of the product line is important, especially to dealers. "We're going to see a new group of buyers walking into Suzuki dealerships," Anderson predicts.

In advertising and dealer literature for the four-door Sidekick, Suzuki will emphasize standard equipment, especially on the entry-level model.

The sport-utility will be offered in JX and JLX trim. Both carry the same 1.6-liter engine that powers the two-door.

Standard on the base model are AM/FM/stereo with cassette player, power steering, power mirrors, dual outside mirrors and rear window defogger. The JLX has all that plus power windows, power door locks and remote fuel-filler opener. Both models have manual locking hubs; automatic locking hubs are an option.

Wheelbase of the four-door Sidekick is 97.6 inches, 11 inches longer than the two-door. Overall length is 158.7 inches, compared to 142.5 inches for the two-door.

VOLVO

FROM PAGE 52

gine as the 940-SE. The Turbo price is $29,295. The 940-GLE at$27,885 is powered by a 16-valve, naturally aspirated engine. All 940 sedans have three-point seat belts and rear headrests. The 940 wagons have only a lap belt for the middle passenger in the rear seat.

All 940 sedans and wagons are equipped with an automatic locking differential, which shifts power to the wheel with traction if one of the rear wheels begins to slip. The differential operates only at speeds below 25 mph. All 940s also have ABS, automatic transmission, air conditioning and sunroof.

240 series: ABS is available as a $995 option on the 240 sedan and 240 wagon. The air conditioner has greater cooling capacity than in 1990.

Volvo has dropped the DL designation for 1991 and has upgraded the base 240 to that level. The 240 sedan is $19,300 with manual transmission, up 2.6 percent over last year's 240-DL. The manual-equipped 240 wagon is $19,795, up 2.5 percent. A sunroof is optional on the sedan, but not available on the wagon.

The plain-vanilla 240 was introduced last year, with sunroof, air conditioning and AM/FM/stereo/cassette player available only as options and no ABS.

740 series: The 740 series has a revised instrument panel, similar to the new 940. The stereo system has six speakers instead of four, and there are new air conditioner controls.

The manual-transmission 740 sedan has a sticker of $22,755, up 7.9 percent from its final 1990 price; the 740 wagon is $23,435, up 7.6 percent.

The manual-equipped 740 Turbo sedan is $24,810, down 5.6 percent from last year's model; the 740 Turbo wagon is $25,490, down 5.5 percent.

The 740-GL and 740-GLE sedans and wagons have been dropped, along with the 760-GLE V-6 sedan and the 760-GLE Turbo sedan and wagon.

The automatic locking differential is standard on the 740 Turbo, all 940 models and the coupe. It is a $385 option on the base 740 sedan and wagon.

940 series: Prices of the 940 station wagons are: GLE, $28,565; Turbo, $29,975; SE, $33,630.

Coupe: The coupe will be discontinued after 1991. It was formerly badged the 780 Turbo or the 780 coupe, which was a V-6. Fewer than 400 will be imported; all will have the 188-hp turbocharged four-cylinder engine. The price is $41,945, up 5.0 percent.

*Estimate

GERMANY

FROM PAGE 1

Industry insiders note that Japan's strategy in open markets has been to push market share up to a pain threshold that invites local reaction, then hold gains for a period of years before mounting another assault. The last upward thrust of the Japanese in Germany occurred from 1982 through 1986, when they increased penetration from 9.8 percent to 15 percent.

Since then, Japan's share has been remarkably steady. But in July, Japanese imports captured 16.9 percent, then spurted to 20.1 percent in August before falling back to 17.1 percent in September, according to unofficial estimates compiled by *Automotive News*.

For the first eight months of 1990, the Japanese share in Germany rose to 15.8 percent — about 326,000 cars — from 14.6 percent through the same period last year, or about 285,000 cars. For all of 1989, the Japanese claimed 14.9 percent on sales of 422,000 cars.

Although analysts agreed that the August surge could have been the result of special factors, such as lack of capacity among German carmakers, most noted that it was dangerous for the Japanese to appear to be spearing one of their staunchest allies.

In contrast to other major EC members, Germany imposes no quota on Japanese imports. France limits the Japanese to 3 percent of the market; Spain, to 1.2 percent; and Italy, 1.5 percent. A gentlemen's agreement caps the Japanese at an 11 percent share of the British market.

"It's a little peculiar," said Steven Reitman, who follows the European industry for UBS Phillips & Drew in London. "The timing is awful. I would be surprised if they are doing something like this, because the Germans are the most free-trade-oriented of any of Europe's manufacturers."

According to Reitman, the specter of a 5-point jump in market share has set off "alarm bells" among protectionists, bells that are clearly audible to the Germans.

"If the Japanese decide to turn up the heat, the Germans might be driven closer to the Calvet position," he said.

Edmund Chew of DRI Europe in

AUTOMOTIVE NEWS / D. L. BURHANS

Frankfurt agreed. "The Japanese ought to be concerned about German reaction," he warned.

Although Germany has no official limitations on Japanese imports, many industry executives speak privately of an unwritten accord reached between the two countries in the mid-1980s, limiting the Japanese to about 15 percent.

The rumored understanding is consistently denied, but it has attained the stature of an article of faith in Germany. Many executives relate tales of mysteriously delayed year-end shipments and supplies of popular models that suddenly dry up, thereby helping to maintain the Japanese share at about 15 percent.

"I strongly believe there is a limit," said Schmidt at Automotive Industry Data. "Moreover, the Japanese have an incredible knack for pulling back just at the right moment. They are just trying it on in Germany. They want to see what the Germans will do about it. Let's see what happens in October, November and December."

Even an executive at a Japanese import company speculates that Tokyo is testing the unacknowledged restriction.

"I see a trend in the direction of 20 percent," said an executive at Mazda Motors (Germany). "It will be possible in Germany because the German manufacturers export many cars" to Japan.

Germany is the only country in the world that runs an automotive trade surplus with the Japanese, as measured by value.

But Moriharu Shizume, general director of the Paris office of the Japan Automobile Manufacturers Association, denied that the Japanese are mounting a drive on Germany. The increases "are not very much, actually," he said.

Similarly, Kimio Kurasawa, deputy general manager of Mazda Motors' European office in Brussels, Belgium, said Japanese carmakers are not pushing to increase market share in Germany. He said the limited number of units available for all of Europe must be spread evenly.

Many analysts scoff at such explanations.

With all other major European markets declining, analysts argue, Japanese makers could easily shift volume into Germany to maintain overall sales.

"Germany is a bit of a swing factor," said John Lawson of Nomura Research Institute in London. "With EC volume down, Germany happens to be a good place to sell cars."

So far, Germany's major domestic producers have expressed no official concern.

A spokesman for Volkswagen AG, Germany's market leader, attributed the increase to a combination of German factory downtime during the August vacation period and capacity constraints for German makers.

VW has long waiting lists for its Passat and Golf models, he said.

"It's nothing unusual, and I think you'll see Japanese market share come down," he said.

Similarly, a spokesman for General Motors' Adam Opel AG, the No. 2 seller in Germany, added: "Opel is not nervous."

GM Europe President Robert Eaton was cautious about offering explanations for the surge. But he also ventured that Japanese importers may simply have had the capacity to meet demand at a time when others were constrained.

European sales dip staggers profits

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT — The marked slowdown in European car sales began showing up on the industry's bottom line this month, with several major producers reporting first-half earnings declines from a year earlier. Analysts foresee even weaker earnings ahead as carmakers turn to discounting to hang on to market share.

"Next year is going to be a tough year for everyone," said Steven Reitman, auto industry specialist at UBS Phillips & Drew in London. Reitman, who foresees European sales falling 4 percent to 12.4 million units next year, predicts that manufacturers will have to cut margins further to maintain share in a weak market.

Volkswagen AG, Europe's sales leader, recently reported a 16.5 percent decline in operating profit, to 1.16 billion marks ($758 million), for the first half of 1990. VW cited tougher competition at home and problems at its Autolatina unit in South America.

Reitman last week cut his earnings estimate for VW, predicting a 20 percent decline at the operating level for the full year. VW's reported operating profit last year of 2.99 billion marks ($1.95 billion).

"There is a very substantial squeeze going on" at VW, said Reitman. He cited extra labor costs as VW produces at capacity; the impact of a price-oriented marketing campaign in Germany, lower domestic sales and the situation in South America.

Fiat SpA, Europe's second biggest carmaker after VW, said its pre-tax profit fell 12.6 percent from a strong year-earlier period, to 2.45 trillion lira ($2.14 billion). Fiat pinned much of the blame on tougher competition, especially in its home market.

Fiat's Italian market share slipped to 54.3 percent in the first half from 58 percent a year ago.

Renault SA, which has yet to report for the half, foresees net income falling at least 8 percent for the year. That would follow net income of 8.7 billion francs ($1.70 billion) last year.

But John Lawson, of Nomura Research Institute in London, said he expects Renault to slide 41 percent, to about 5.1 billion francs ($998 million), because of a higher tax rate.

"If it's off only 8 percent, I'll eat my hat," he said.

Lawson likewise anticipates lower profits for the European units of both General Motors and Ford. He suggested that GM Europe will be down about 20 percent from 1989's $1.83 billion because of a higher tax charge.

He said Ford of Europe's 1989 earnings of $1.29 billion would be "virtually halved" because of downturns in such key markets as Britain, where Ford is market leader, and the costs of new product introductions.

Incentives

No changes were reported last week in buyer or dealer rebates. Readers are advised to check the Incentive Watch tables in the Oct. 8 issue of *Automotive News* for current programs.

Makers pare stockpiles to 58-day supply

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Despite a sluggish sales month in September, combined domestic and import new-car inventories declined to a 58-day supply Oct. 1, as Big 3 automakers thinned stocks.

There were a total of 1,844,028 unsold domestic and imported cars on hand Oct. 1, compared to 1,874,130 on Sept. 1 when the day's supply was 65.

The seven-year average combined domestic and import new-car inventory level on Oct. 1 is a 55-day supply.

Domestic new-car inventories stood at 1,340,098 units on Oct. 1, for a 56-day supply. A year earlier, domestic new-car inventories stood at a 64-day supply.

The imports had a 64-day supply Oct. 1, compared to a 66-day supply Sept. 1. The imports had 503,930 unsold cars on hand Oct. 1, vs. 537,233 on Sept. 1.

Inventories of the Big 3 automakers all decliined in September. GM's stocks dropped from a 74-day supply on Sept. 1 to a 58-day supply on Oct. 1. During the same period, Ford's inventory of unsold cars decreased to a 57-day supply from a 68-day supply, and Chrysler's slid to 69 days from 79 days.

Among the major importers, Honda, Toyota and Mazda inventories all were up; stocks of unsold Nissan and Mitsubishi cars were down.

CLEAN AIR

FROM PAGE 2

nferees had been instructed to
ish by yesterday — could go to
e floors of both the House and
e Senate for a vote this week.
Key provisions include:
Increases in tailpipe controls
uld be phased in between the
94 and 1996 model years, setting
vels of 0.25 grams per mile of hy-
ocarbon emissions; 3.4 gpm car-
n monoxide; and 0.4 gpm oxides
nitrogen. Current levels are 0.41
, 3.4 CO and 1.0 NOx. Califor-
a will require similar emissions
vels beginning with the 1993
odel year.
A second round of tailpipe stan-
rds beginning with cars made
ter Jan. 1, 2003, would be trig-
red only if six cities still fail to
tain pollution standards.
The 0.125 HC, 1.7 CO and 0.20
Ox requirements would be
ased in only if EPA determines
at the cost nationwide would still
pply significant benefits to the
orst-polluted areas.
The agreement would require
issions equipment to be certified
pable of meeting standards for
r 10 years or 100,000 miles, in-
ead of the current five years or
,000 miles; but the vehicles could
tested and recalled by EPA only
o seven years and 70,000 miles.
Onboard vapor recovery canis-
rs would be required only after a
int one-year study by the De-
artment of Transportation and
PA. If the National Highway
affic Safety Administration de-
rmines there are no safety prob-
ms, the systems would be phased
over four model years.
An alternative fuels pilot pro-
am with a sales mandate would
phased in using a transitional
w-emissions vehicle. Makers
uld have to sell a total of 150,-
0 alternative fuel cars each year
ginning in 1996 and 300,000 be-
nning in 1999. Those cars could
n on non-methane organic gaso-
e that would produce emissions
vels of 0.25 HC, 3.4 CO and 0.4
Ox. An ultra-clean-running low
issions vehicle would have to be
ld beginning in 2001, requiring
075 HC, 3.4 CO and 0.2 NOx.
The alternative fuels fleet pro-
am would begin in 1998 and im-
diately require the cleaner low
issions vehicle. Centrally fueled
ts in the 31 most polluted cities
uld be affected, but vehicles
t are taken home in the eve-
g would be exempt.
Beginning in 1992, gasoline con-
ining 2.7 percent oxygenates
uld have to be sold in cities that
ve a smog problem and that fail
meet carbon monoxide pollution
andards. The requirement could
delayed as long as two years if
e EPA administrator determines
at supply and distribution capac-
y are not available. Only cleaner
formulated gasoline would be
ld in the nine most polluted cities
ginning in 1995. The gas would
ve to reduce volatile organic
mpounds and toxic emissions by
percent. In 2000, the toxics in
asoline would have to be reduced
least 20 percent more. Reformu-
ted gas would also have to con-
n 2 percent oxygenates.

8-millionth is 3 weeks behind 1989

By Anne E. Wright
AUTOMOTIVE NEWS CHIEF STATISTICIAN

U.S. automakers produced their 8-millionth vehicle last Wednesday. Last year, the 8-millionth vehicle was produced three weeks earlier — on Sept. 19.

Year-to-date, U.S. car and truck production is 8,094,306 units, down 8.11 percent from the year-ago total of 8,808,902.

Last week, 142,458 autos were assembled, 1.08 percent below the previous week and 0.24 percent above the year-ago week.

U.S. truck producers were scheduled to build 84,347 units last week, up 6.22 percent over the prior week and 32.05 percent above the same week in 1989.

Ford Motor Co. scheduled Saturday overtime at two plants — the Wayne, Mich., car plant and the Kansas City, Mo., truck plant.

This week, the company plans to idle four plants — Kansas City, Mo.; Atlanta; and Lorain, Ohio, car and truck due to inventory adjustment. Production is scheduled to resume Oct. 22.

General Motors scheduled overtime last week at Janesville, Wis., and Lansing, Mich. (plants A and B).

The plants produce Chevrolet Cavalier, Oldsmobile Cutlass Calais, Buick Skylark and Pontiac Grand Am.

GM's Arlington, Texas, plant is scheduled to close today for two weeks due to slow sales. The plant produces the Cadillac Brougham and the Chevrolet Caprice. Production is slated to resume Oct. 29.

Chrysler is scheduled to halt production at the Toledo, Ohio, plant today for inventory adjustment. The plant produces Jeep Cherokee, Comanche, Wagoneer and Grand Wagoneer. Production is scheduled to resume the week of Oct. 22.

A down week for Canadians

Canadian auto producers were scheduled to assemble 21,741 cars last week, 16.27 percent below the prior week but 24.80 percent above the year-ago week.

Year-to-date, 821,512 cars have been produced, leading last year's output at this time by 8.26 percent.

Truckmakers assembled 14,561 units last week, falling 8.35 percent below the prior week and 7.63 percent below the year-ago week.

So far this year, 655,920 trucks have been produced, 12.22 percent behind the year-ago total.

Ford launches Cargo output at Louisville

By Joseph Bohn
TRUCK EDITOR

Ford Motor Co. began producing its medium-duty Cargo truck line at its Kentucky Truck plant in Louisville last week.

The Cargo models formerly were imported from Brazil.

The company plans to produce about 3,000 annually at Louisville but has scheduled only 250 units for October-December.

Initially, Ford will produce only the heavier CF-8000 series, which has gross vehicle weight ratings of 33,000 to 36,000 pounds. A special CFT tandem-axle model has 44,000 to 51,000 gvw ratings.

Ford will add the CF-7000 series to Louisville production in March, according to Jeff Kahn, customer interface manager, Ford Truck Operations. The CF-7000 has a 29,500-pound gvw rating.

Ford will drop the CF-6000 and add a lighter 26,500-pound gvw model in the CF-7000 series.

Ford now uses North American-sourced components in Cargo production.

The change provides a greater commonality of parts among Cargo and Ford's F-series and L-series trucks.

Ford spent $6 million to convert its plant to Cargo production.

Chrysler may ax Dodge/Jeep vehicle-sharing plan

y Mary Connelly
TOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. xecutives may reconsider their plan to give odge dealers a Jeep-based sport-utility in the 993 model year.

And in the further pursuit of brand dis-nctiveness, they may not give the company's opular minivan to Jeep-Eagle dealers.

While no decisions have been made, Chrysler considering pulling the upscale sport-utility om the Dodge lineup to ensure the exclusivity f the Jeep brand, according to sources familiar ith the discussions.

In the spring of 1992, Jeep will begin sell-ng its version of the new vehicle as an up-market companion to the Jeep Cherokee.

Chrysler officials expect many Dodge dealers to be angry if the company reverses its decision. But the company may give Dodge dealers a separate victory. The company is also reconsidering its plan to give Jeep-Eagle dealers a version of the company's popular minivan. Late this summer, Chrysler ordered the tooling for a Jeep-Eagle minivan, code-named Commando. Jeep-Eagle dealers had anticipated selling the vehicle at the start of the 1992 model year.

Last year, Chrysler officials confirmed that exterior/interior designs for an Eagle minivan had been completed. At that time, the model was a short-wheelbase minivan with all-wheel drive as standard.

Chrysler's reassessment is a pivotal battle in a long-festering dispute within the company's three dealer networks. Chrysler-Plymouth, Dodge and Jeep-Eagle dealers have been squabbling over product allocation and seeking exclusive models since Chrysler bought American Motors in 1987 and created Jeep-Eagle to sell AMC products.

Any alteration of the Dodge product plan could touch off a dealer rebellion.

When told by *Automotive News* that Chrysler might reconsider giving ZD to Dodge, Ken Meade, chairman of the Dodge National Dealer Council, said, "I'm tired of having a sick, adopted sister we didn't ask for trying to take

Emission, mileage goals worry Japanese makers

y Mary Ann Maskery
TOMOTIVE NEWS STAFF REPORTER

TOKYO — Takeshi Yamada, a onda Motor Co. director who versees the company's research to environmental technology, re-alls that when the United States rst moved to set fuel-efficiency andards in the 1970s, the indus-y was able to respond because e problem was specific.

Although the introduction of rporate average fuel economy andards represented a "severe ock," he recalled last week, onda was able to respond with its VCC engine.

But today, he says, everybody ants everything, and he's not nfident about the industry's abil-y to respond. There are more roblems today, he says, and ey're more severe.

"Besides emission control, safety d fuel efficiency, there are recy-ing and other environmental sues," he said. "I wish someone ould indicate which is more im-ortant. But no one has decided, we must watch everything."

Yamada's response mirrors the perplexed reaction of many Japanese carmakers to a barrage of new emissions, safety and fuel-efficiency requirements coming out of the United States.

Like their American counterparts, Yamada says, Japanese carmakers want some priorities on a variety of equally demanding — and often mutually exclusive — goals.

For example, Yamada says, California's recently stated tailpipe standards — the toughest in the nation — are "impossible" to attain given other, conflicting demands on automakers.

The California plan calls for the introduction by 1994 of progressively and dramatically cleaner cars, and stipulates that 2 percent of all new cars sold in the state by 1998 have zero emissions.

In reality, Yamada says, California is talking about a shift to electric cars. "Working with current technology and with the standard gasoline engine, the regulations are

Selling price of Acura NSX is a lot more than sticker

y Liz Pinto
TOMOTIVE NEWS STAFF REPORTER

When the list of what's hot and what's not is compiled for 1991, the ew Acura NSX could hold the o. 1 slot in the hot column.

Hopeful owners are lining up at cura dealerships across the coun-y, some ready to plunk down al-ost twice the $60,000 sticker rice for the handcrafted, all-alu-inum sports coupe from Honda otor Co. Ltd.

The NSX, the first Japanese ex-tic car to reach the United States, a 3.0-liter mid-engined V-6 that oasts 270 horsepower and can print from 0 to 60 mph in 5.6 sec-nds.

Thomas Elliott, executive vice president at American Honda Motor Co., says he's heard of NSX models going for as much as $108,000. A more typical price is $75,000 to $80,000, he said.

Still, with a gross profit of more than $10,000 in the $60,000 sticker, a single NSX sale can be a boon to Acura dealers. Between 20 percent and 50 percent of Acura dealers still aren't profitable, Elliott said.

"If someone wants to pay more money (than list price) for it, we're no different from anyone else. We'll take it," said Harvey Mack, a salesman at Acura of Seattle. "We're taking deposits on the car,

Door-to-door car salesmen are on the road to oblivion as an era wanes in Japan

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — For generations of Japanese car buyers, he has been an honored link to the seller, a welcome personal face on an otherwise faceless corporation.

For the producer, he has been a vital conduit between factory and buyer. Indeed, as late as 1985, he sold nine out of every 10 cars registered in Japan.

But the *homon-man*, literally door-to-door trade man, is going the way of the *samurai* as Japan discovers that the time-honored practice of peddling cars door-to-door is no longer affordable. Pressured by demographics, changing social customs and the higher expectations of a new generation, Japan's auto industry is scrambling to shift its primary sales effort from the living room to the showroom.

"The labor shortage that is forcing manufacturers into heavy capital investment for rationalization schemes is doing the same to dealers," says Kazumasa Goto, vice president of the Japan Automobile Dealers Association.

Free at last? DeLorean settles last car project suit

By Edward Lapham
MANAGING EDITOR

DETROIT — Former automaker John Z. DeLorean has agreed to pay $7 million to settle the last of the civil claims against him that stem from his defunct stainless-steel sports-car project.

The agreement, reached Oct. 11 in the chambers of U.S. District Judge Gerald E. Rosen, frees DeLorean from litigation involving the car project for the first time since the venture folded in 1982.

DeLorean

DeLorean may still face criminal contempt charges in Detroit and could be jailed, according to a transcript of the settlement proceedings obtained by *Automotive News*.

DSQ Property Co. Ltd., successor company to his defunct Northern Ireland factory known as DeLorean Motor Cars Ltd., agreed to discontinue proceedings involving a $54 million default judgment granted against DeLorean in 1988 in the High Court of Justice in London.

Last December, another High Court decision lifted DeLorean from that judgment, but the matter was on appeal to the House of Lords to reinstate the award. Earlier last year, the U.S. District Court in Detroit had ordered DeLorean to pay the $54 million default judgment, and the U.S. Sixth Circuit Court in Cincinnati affirmed the decision.

The 65-year-old former automaker now will have paid a total of $16.4 million to settle claims against him stemming from his short-lived automaking venture in Belfast, Northern Ireland. In 1987, DeLorean reached a $9.4 million agreement with the trustee of the bankrupt DeLorean Motor Co., settling claims against him by the company and its creditors.

Although he called it a global settlement, Rosen told DeLorean he might still face criminal contempt charges stemming from payments DeLorean and his attorneys received from the frozen assets of DeLorean-owned Logan Manufacturing Co., in apparent violation of a court order.

"Courts speak through their orders," Rosen told DeLorean. "They mean nothing if lawyers and their clients believe they are free to circumvent, avoid or blatantly act in derogation of those orders. The only authority that a federal District Court has to enforce its orders is to find a contempt. They are not to be violated frivolously, willy-nilly."

Rosen said DeLorean and at least one of his attorneys may yet face a fine or incarceration for criminal contempt.

The $7 million settlement will be paid in two installments through DeLorean's snow-grooming equipment company in Logan, Utah. The first payment of $3 million is due April 30, 1991. The second payment of $4 million is due Jan. 31, 1992.

DeLorean, who once headed Chevrolet and Pontiac, left General Motors in 1973. In 1976, he incorporated DeLorean Motor Co. and began the fundraising efforts that eventually took his sports-car assembly plant to troubled Northern Ireland.

Production began in February 1981 and totaled fewer than 9,000 of the stainless-steel sports cars. The British government, a major creditor, placed the insolvent Belfast factory in receivership in February 1982. The parent U.S. company finally collapsed into bankruptcy in October 1982 and filed for protection from its creditors under Chapter 11 after DeLorean was arrested on federal drug charges in Los Angeles. DeLorean was acquitted of all charges.

In 1985, he was indicted on fraud and racketeering charges by a federal grand jury in Detroit. Those charges related to $17.65 million that disappeared from the sports-car project. In December 1986, DeLorean was acquitted of all those charges in a federal court trial in Detroit.

Although DeLorean is now free from litigation, others are not. The trustee of bankrupt DeLorean Motor Co. has a $300 million suit pending against Arthur Andersen & Co., the international accounting firm that audited some DeLorean-controlled companies. And Frederick Bushell, one-time chairman of Group Lotus, is slated to stand trial in April in Belfast on fraud charges related to the missing $17.65 million.

AUTOMOTIVE NEWS/JOE WILSSENS

GM Chairman Robert Stempel, left, and UAW President Owen Bieber shook hands Friday after signing the labor agreement that will guide GM workers for the next three years.

Chrysler seeks 10-hour shifts for vans

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Workers at Chrysler Corp.'s St. Louis II plant fear that a new national contract between Chrysler and the UAW could force them to accept a 10-hour-a-day, four-day work week.

Last fall, the local workers rejected the plan, which Chrysler says would allow it to produce more of its profitable minivans without new capital investment.

Talks between Chrysler and the union are expected to speed up this week. The union is expected to announce an Oct. 31 deadline to reach an accord with Chrysler, which hopes to break the pattern set at Ford Motor Co. and General Motors.

Ford hourly workers were expected to ratify their contract on Sunday, Oct. 21. GM hourly workers adopted a similar three-year pact Sept. 30. Chrysler officials say they can't afford to follow the same pattern. The old contracts for the Big 3 expired Sept. 14.

At an Oct. 11 meeting, Chrysler Chairman Lee Iacocca told UAW negotiators that Chrysler needs at least three things to remain competitive, according to a negotiator who requested anonymity. Those three things were:

- Lower health care costs
- Lower pension costs
- A 10-hour work day at the St. Louis II plant, which builds minivans.

"He was really serious about the three-crew system at St. Louis," the negotiator said, "about as serious as he was about health care; he surprised me."

St. Louis II produces the long wheelbase minivans — the Grand Voyager and Grand Caravan passenger and cargo models, and the Town & Country. Through September, 141,304 vehicles had been produced at the plant in 1990.

Minivans are the most profitable of all Chrysler-built vehicles. The three-crew system could allow the plant to produce about 25 percent more without additional capital because work time would increase from 16 hours a day to 20. The plant would operate with three work crews for six or seven days a week.

Employees at the plant rejected the three-crew proposal last November because they insisted on overtime pay for weekends and for work beyond eight hours daily.

Stan Marshall, UAW vice president and head of the union's Chrysler department, says he

Oct. 25 is CAW, Chrysler D-day

By Alex Law
STAFF CORRESPONDENT

TORONTO — The Canadian Auto Workers has set a strike deadline of midnight Thursdaywith Chrysler Canada. Chrysler is the last of the Canadian Big 3 without a contract now that General Motors of Canada workers have overwhelming approved a three-year deal.

On Friday, a Chrysler spokesman said the company would likely present an economic package over the weekend. The company did not indicate whether it was prepared to go along with the bargaining pattern established at Ford of Canada and GM of Canada.

But the spokesman noted that Chrysler's local issues are different than Ford's or GM's, and that those two contracts weren't identical. There's a lot of work to do to get a settlement by Thursday, he admitted, but a deal is "do-able."

At GM of Canada, about 90 percent of voting workers agreed on a pattern deal based on the one reached between Ford and the union in September. The deal calls for wage increases, including cost of living allowances, of 7.5 percent in the first year, 6.7 percent in the second, and 4.8 percent in the third. The average base rate is now $17.82 (U.S. $15.24); $1.62 (U.S. $1.38) is for COLA.

TRIPLE WALLOP

Taxwriters eye guzzlers, luxury and gas

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Congressional budget negotiators headed into the weekend with their sights set on higher gasoline and gas-guzzler taxes as well as a new tax on luxury cars.

The House proposal approved last week included doubling the current gas-guzzler tax and placing a 10 percent luxury tax on the price of a car above $30,000.

The gas-guzzler proposal would boost the minimum penalty from $500 to $1,000 for cars that get 21.5 mpg to 22.5 mpg. At the other extreme, the maximum penalty would increase from $3,850 to $7,700 for cars that get less than 12.5 mpg.

The Senate bill also contained the luxury tax in addition to a proposed 9-cent-per-gallon increase in the gasoline tax; it would total 18.5 cents by 1992. The tax on diesel fuel would jump from 15 cents to 24.5 cents per gallon.

Negotiations between House and Senate to reconcile their budget packages were expected to continue through the weekend.

Observers expected the luxury tax to remain in the final bill because it was included in both the House and Senate proposals. The fate of the increases in gas-guzzler and gasoline taxes was less certain. Members of the Senate finance committee, the upper body's revenue-raising committee, have favored the gas-guzzler tax in the past.

Chrysler Corp. has backed an increased gasoline tax; Ford Motor Co. conditionally supported an increase, and General Motors opposes it.

The import auto industry aggressively fought the luxury and gas-guzzler proposals last week, arguing that both measures are discriminatory.

The domestic industry lobbied to have the $30,000 luxury tax adjusted annually for inflation. It fears that more cars will cross that threshold in years to come, especially as prices increase to reflect the cost of air bags and additional safety features.

"The tax is not equitable in that it's not indexed (to inflation)," said H. Thomas Greene, executive director of the legisiative group for the National Automobile Dealers Association. He said a $25,000 car today will be a $30,000 car in a couple years "and that's when you get into taxing a family-sized vehicle."

The EPA has classified 47 cars as gas guzzlers for the 1991 model year.

"The gas-guzzler tax would hit many of the cars that would also be hit by the luxury car tax. That's a substantial increase," Greene said. "Any time the price goes up, the chances of reduced sales are of concern."

The domestic automakers successfully fought a House Ways and Means Committee proposal that

Correction

Bivouac Industries of Vandalia, Mich., is producing van conversions on a small scale, according to company President Scott Chapman.

Chapman said Bivouac has a skeleton crew converting vans while he negotiates with banks to restructure the company.

Automotive News reported last week that the company had closed while seeking further credit extensions.

Ford targets Taurus owners with new Crown Victoria

Laura Clark
OMOTIVE NEWS STAFF REPORTER

Ford Division will position its w full-sized Crown Victoria as a p-up vehicle from its successful d-sized Taurus when the Crown ctoria is introduced March 21.

Ford officials expect the new r's relatively aerodynamic shape d its handling and smoother en- ne to appeal both to current wners of full-sized cars and to ospects moving up from mid- ed cars such as Taurus and its mpetitors, according to Keith agee, Ford Division general mar- ting manager.

The Crown Victoria and its sister r, the Mercury Grand Marquis, ve not greatly changed since the 79 model year and have enjoyed strong position in the full-sized gment of the market.

Ford said Crown Victoria took .9 percent of the full-sized car gment in the 1990 model year, d Grand Marquis took 12.4 per- nt. But because of their tradi- nal styling, the cars had limited peal to owners of aerodynamic oducts like the Taurus and Mer- y Sable.

"Our dealers tell us they'll have trouble selling the new model to eir traditional full-sized-car cus- mers, while consumer research indicates that the new design also will have a strong appeal to buyers who like contemporary styling," said Magee.

Ford officials say the new Crown Victoria will be more of a "driver's car" with more responsive handling and a less "cushy" ride than the current model.

Ford said the more than 1.5 million Taurus owners in the United States will be excellent prospects for the restyled Crown Victoria.

The new model is expected to reduce the median age of a Crown Victoria buyer to 54 from the current 65.

Ford expects car sales in the United States to increase 6 percent during the next seven years. It looks for an increase of about 8 percent in the upper-middle segment in which Taurus competes and a decline of about 8 percent in the large-car market in which Crown Victoria competes.

"We are looking at the Crown Victoria to grow in a shrinking segment; one way to do that is to get people into a Crown Victoria before they go somewhere else," said a Ford spokeswoman. She declined to give sales projections for the car. Ford sold 97,403 Crown Victoria sedans in the 1989 calendar year.

Ford is dropping the Crown Victoria and Country Squire wagons because of declining sales. Ford sold about 11,000 of the wagons in 1989.

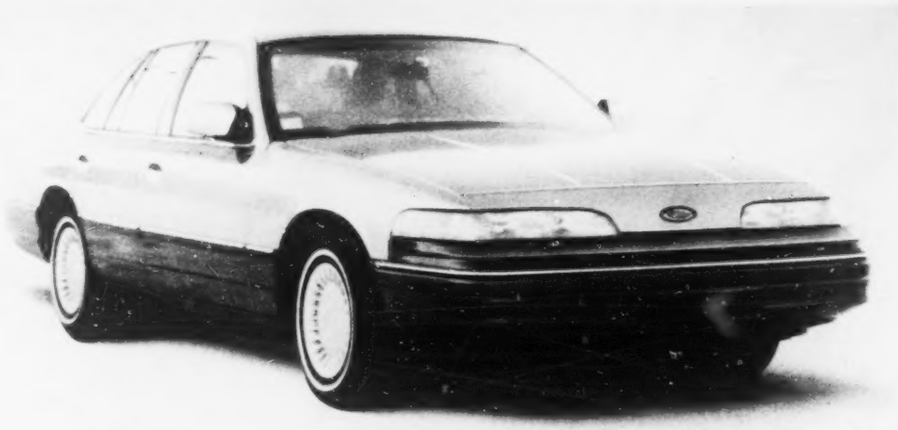
Although Ford believes the softer look of the new Crown Victoria will appeal to conventional buyers as well as Taurus owners attached to the aero look, the Ford spokeswoman said the division has not finalized specific marketing plans to accomplish that conversion.

Ford is also looking closely at the competition. Recently in separate clinics, Ford asked retail buyers and fleet customers to evaluate the 1992 Crown Victoria and the 1991 Chevrolet Caprice, which was restyled and went on sale last January.

For the first nine months of 1990, Crown Victoria sales were off 0.41 percent, at 87,767 units. For the same period, Caprice sales were up 2.38 percent, at 130,006 units.

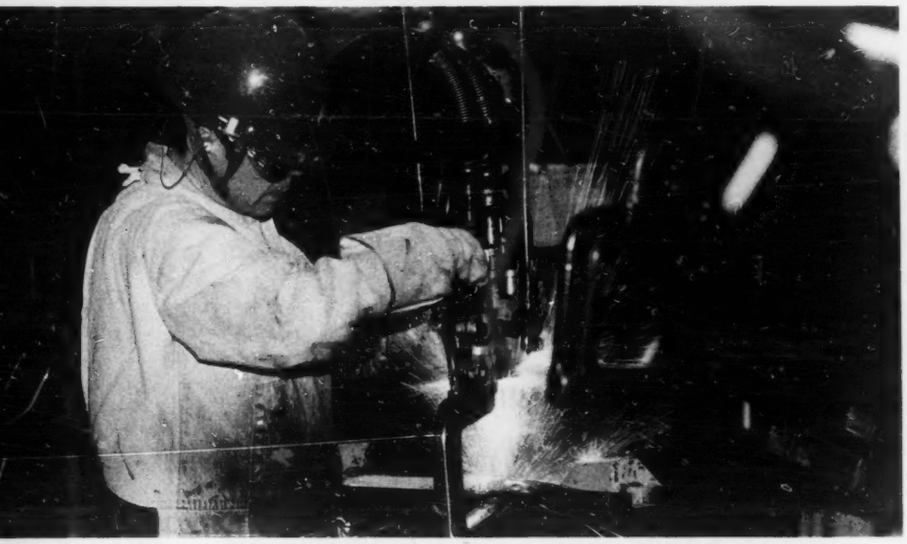
Major Ford fleet customers preferred the 1992 Crown Victoria to the 1991 Caprice in a side-by-side comparison, said Bill Willis, Ford

see CROWN VIC, page 46



POPULAR MECHANICS/JIM DUNNE

The new Ford Crown Victoria, to be introduced in March, will feature rounded styling similar to the Taurus.



rumizu Suzuki works on one of three lines specially designed for older workers at Nissan's Oppama plant.

GRAY POWER

Japan automaker caters to older workers to counter effects of shrinking labor pool

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Five years ago, Harumizu Suzuki, a 55-year-old welder at Nissan Motor Co. Ltd.'s Oppama plant, might have been reassigned to sales or politely "asked" to take early retirement for being unable to keep up with the grueling pace on the assembly line.

In the economic climate of the time, Japan's carmakers were trying to slash costs to the bone. And on the line, speed and agility were prized more than even 21 years of experience.

No more.

Spurred by the demographic graying of the population and its inevitable consequence — a rapidly shrinking labor pool — Japan's corporations are scrambling to fill the gaps in their worker ranks with everything from foreign recruitment to increased spending on high-tech automation.

At Oppama, where a third of the plant's 2,600 workers are over 45, Nissan has set up three assembly lines especially for older workers, hoping to keep them on the payroll.

For the automakers, the pressure of an aging, declining labor pool has been exacerbated by an unforeseen surge in sales — just as production workers have become

GM arms employees with quality facts

Workers, retirees asked to tout gains

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

If you're chatting with a General Motors employee about product quality and the person reaches for their wallet, watch out — you're about to get hit with facts.

GM this month sent a "fact book" to each of its 500,000 employees and 330,000 retirees. GM executives hope those people will uniformly trumpet GM's recent quality achievements to friends, neighbors and relatives.

To make it even more convenient for use at cocktail parties and barbecues, highlights from the folder are boiled down into a laminated, wallet-sized card.

The folder and card are an extension of GM's "Putting Quality On The Road" marketing campaign that began May 1, said William Quigley, executive in charge of

Keep These Quality Facts In Mind

GM quality is competitive

- The Harbour & Associates study shows GM vehicles are now built better than the average European and are within one-half of one defect of the average Japanese import.
- For the third year in a row, the J.D. Power IQS ranked a GM nameplate as maker of the most trouble-free U.S. cars.

GM quality lasts

- GM vehicles were the most dependable U.S. makes in the J.D. Power Vehicle Dependability Index study of 4- to 5-year-old 1985 models — and more dependable than the average Asian or European import.
- For a decade, 3- to 5-year-old GM cars have held their value better than all other U.S. cars, according to a GM corporate study. Our trucks hold their value better than all other trucks sold in America — foreign or domestic.
- In 1989 there was a higher percentage of 1979 GM cars still on the road than '79s from Ford, Chrysler, Toyota, Nissan or Honda.

GM builds reliability into every part

- A GM study shows that our automatic transmissions are more problem-free than those of any domestic competitor — and most imports.

Outstanding engines

- 2.3-liter *Quad 4* is as problem-free as 2.0-liter engines from Toyota or Honda.
- *3800 V6* is competitive with Toyota 2.8-liter L6 or Honda 2.7-liter V6.
- 4.5-liter *Cadillac V8* has fewer owner-reported problems than V8s from Toyota or Mercedes-Benz.

Quality is a way of life at GM. And we're going to keep working to make every GM car or truck the best in the world.

This is not the first time GM has asked its people to be roving ambassadors. But this is a more mass-communications.

sive, coordinated effort.

"In some of our survey work with employees, we heard 'We

High-tech engine mount may quiet inline 4 and 6 bangers, cut costs

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

A new type of computer-controlled, "active" engine mount promises to make shaky inline four-cylinder and V-6 engines as quiet and vibration-free as a V-8.

The development of active engine mounts could give new life to aged four-cylinder engines, save vehicle weight, increase fuel economy and conserve billions of dollars in engine development costs.

Until recently, increased consumer awareness of noise, vibration and harshness has been pushing makers away from fours to smooth-running inline six, V-6, V-8 and even V-12 engines.

But the threat of tougher fuel economy standards, chassis weight-reduction programs and consumer anxiety about rising fuel prices beg engineers to reconsider the low weight, mechanical simplicity and thermal efficiency of four-cylinder engines. And this engineering breakthrough would eliminate the four-cylinder engine's greatest disadvantage.

Three companies claim to have arrived at the new engine-quieting technology independently. Lotus Engineering of Norfolk, England in conjunction with engine mount maker Carl Freudenberg of West Germany; Noise Cancellation Technologies Inc., of New York; and Aura Systems Inc., of El Segundo, Calif., have all recently claimed development of an active engine-mount system.

Lotus and Noise Cancellation Technologies claim their electronic systems are far more effective than engine-powered balance shafts because the additional power required to smooth the engine is less — 0.1 horsepower for engine mounts versus approximately 1.0 to 3.0 horsepower for a balance shaft.

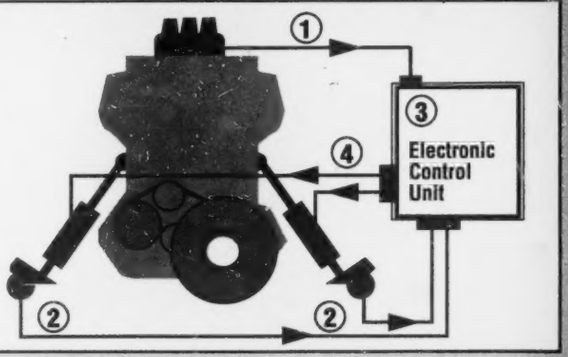
Active mounts weigh less (5 to 10 pounds vs. 20 pounds). They could also reduce engine-packaging problems by eliminating bulky balance-shaft systems. And finally, because they are computer controlled and programmable, they are adaptive to a much wider range of engine speeds and loads.

Balance-shaft systems provide their vibration reducing benefit in a relatively narrow range of engine speeds and loads.

Wilhelm Cashen, an Aura Systems representative, said his company is currently developing an electro-magnetic version of an active mount for automotive applications. The Lotus and Noise Can-

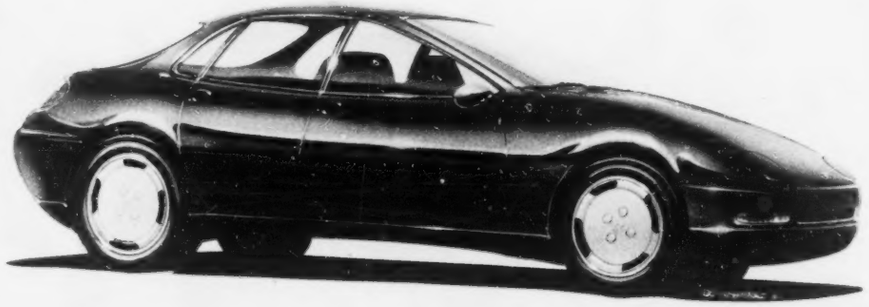
see MOUNT, page 41

How active engine mounts work



1. Engine speed sensor reports to Electronic Control Unit.
2. Chassis accelerometers measure vibration between body structure and engine.
3. ECU calculates how far and fast engine mounts must move to keep engine vibration from reaching chassis.
4. ECU triggers engine mount movement.

AUTOMOTIVE NEWS / DAVIS L. BURNHAM



Porsches for the '90s

Porsche apparently is planning to close out the century with two all-new cars. The first is a four door that will replace the 928. Power will come from a new V-8, displacing between 3.5 and 4.0 liters and making between 300 to 400 horsepower. Porsche has also conducted extensive testing of a small two-door sports car.

Extra selling day boosts early October sales

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Aided by an extra selling day, sales of U.S.-made cars and trucks in the first 10 days of October rose 9.3 percent over last year. Domestic automakers had nine selling days in early October and sold 269,274 vehicles compared to 246,378 in eight days last year.

The daily selling rate was down slightly.

Every domestic maker except Ford Motor Co. reported higher combined car and truck sales. Ford's car sales were down 15.4 percent, and its truck sales fell 11 percent for a combined drop of 13.7 percent.

Total domestic car sales of 182,339 were up 14.4 percent over last year. Truck sales fell only 48 units to 86,935.

It was not all good news. This year, the daily selling rate for cars and trucks was 29,919, down from 30,797 in early October last year. The decline in the daily rate is not a good sign, said Tom Webb, chief economist for the National Automobile Dealers Association.

"Unresolved developments in

Slang slur upsets San Francisco

City supervisor's letter says pulled Chevy video is discriminatory

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

San Francisco's board of supervisors last week expressed outrage that a Chevrolet product video used the term "faggot" to describe small, foreign-made pickup trucks.

Supervisor Richard Hongisto registered the protest in a letter to General Motors Chairman Robert Stempel that was signed by nine of Hongisto's board colleagues. The letter noted that the City of San Francisco purchased $500,000 in products last year from GM and that business with GM could be in jeopardy.

The video had limited distribution before being pulled, and GM apologized for the remarks immediately after they were criticized in September. It was part of a large display of 1991 cars and trucks shown to dealers, employees and news media in Nashville, Tenn., and Detroit.

In display scenes, a video captured real consumers and dealers discussing their attitudes on various subjects. A pickup truck display included comments from one customer that "no foreign manufacturer makes a decent-size pickup truck," said Chevrolet spokesman Ralph Kramer.

"He says, 'Either it's a big truck or a little faggot truck, you know,' " Kramer said.

Hongisto said the board considered the slur a violation of GM's vendor relationship with the city and that the matter has been referred to the San Francisco Human Rights Commission for further investigation.

When GM sells vehicles to the city, Hongisto wrote, the company agrees "not to engage in discriminatory practices against lesbians and gay men.

Hongisto said the slur was intentional since it was chosen for the display from more than 90 hours of taped interviews.

The letter requests an apology from the automaker and a commitment to "universal compliance with anti-discrimination laws," requests information on company anti-discrimination policies and asks whether GM planned to distribute educational material to sensitize employees about lesbian and gay co-workers and customers.

"We will respond to the letter in due time," said GM spokesman John Mueller.

Kramer said Chevrolet had already stopped using the video before the slur was publicized.

"There's no excuse for the fact that it stayed in," he said. "It was such a minuscule item, it got missed. Chevrolet's and GM's long history of sensitivity to people everywhere ought to temper some of the anger that has been expressed.

"We reiterated our apologies and regrets that the unfortunate slang expression remained in the video," Kramer said.

He said Chevrolet did not script the comment, and said the filming was done by an independent production house.

VW: *Major deals with China, Czech makers appear to be imminent*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Volkswagen AG, already scheduled to conclude a major production agreement in China next month, also has emerged as the favorite in a contest with France's Renault Group to acquire a significant stake in the Czechoslovakian automaker Skoda.

According to sources in Czechoslovakia, Volkswagen's bid for a stake in the state-owned carmaker AZNP, maker of Skoda models, is heavily favored by Skoda officials and government officials. While stressing that no firm decision had yet been made to reject the rival bid by Renault and its Swedish partner, Volvo AB, they speculated that an agreement with VW could be signed as early as Oct. 29.

According to these sources, VW Chairman Carl Hahn will sign a Skoda agreement on that date during a previously scheduled visit to Prague. But, spokesmen for both VW and Czechoslovakia's official auto industry agency, Motokov, vigorously denied that a deal was set.

"No final agreement has been reached," the Motokov spokesman said. "Negotiations are going on with both Renault and VW."

A VW spokesman, stressing that Hahn's visit was scheduled in July, said, "There is absolutely no connection."

Skoda, which has capacity for about 200,000 units annually, spent several months entertaining offers from Western companies before settling on VW and Renault as finalists. VW's reported offer of up to 4.8 billion marks ($3.2 billion) —

'Smart' highways called next step for safety, mobility

By Joseph Bohn
TRUCK EDITOR

YPSILANTI, Mich. — A national intelligent vehicle-highway system will follow passage of the 1991 Highway Reauthorization Act, according to attendees at a guided vehicle symposium.

The conference was co-sponsored by the Motor Vehicle Manufacturers Association, the Great Lakes Center of Truck Transportation Research and the Federal Highway Administration, and hosted by the University of Michigan.

Mobility is essential to the U.S. economy and lifestyle but it is threatened by safety considerations and traffic congestion, according to Robert Betsold, federal highway director of safety and traffic operations research and development.

An intelligent vehicle-highway system is one way of attacking these problems, he said.

Betsold foresees developing a system in which vehicles directly exchange traffic information with a traffic management center that returns information or instructions to individual motorists.

The Federal Highway Administration expects an intelligent vehicle-highway system research budget of $12 million to $15 million for 1991 and is asking for a fivefold increase for 1992.

Betsold said the program requires about $3 billion over a 10-year period.

He expects to obtain $100 million in federal funding and $200 million in private-sector funding yearly to cover it.

Betsold and other officials urged support for IVHS America, a new non-profit organization designed to coordinate use of navigation and communication technology for vehicles and roadways.

Conference Chairman Robert Erwin, co-director of the University of Michigan's intelligent vehicle-highway system program, defined intelligent vehicle-highway systems as the application of electronics, sensors and computing power to motor vehicles and highways.

He said emphasis must be placed on the "systems" nature of intelligent vehicle-highway systems.

Today, drivers are autonomous sensors with very limited views within their vehicles, Ervin said.

Intelligent vehicle highway systems provide a "system" to improve and streamline highway operations, he said.

Some intelligent vehicle-highway systems are already in use, such as radio motorist information, variable-message signs and early vehicle navigation.

Others, such as near-obstacle detection systems with collision warning and variable cruise control, will soon be in use, Ervin said.

Trucking is a type of motor vehicle operation that stresses getting the job done. Improved operating efficiency, safety and convenience in handling inspections, record-keeping, permitting and tolls provide incentives to motor carriers to adopt intelligent vehicle-highway systems, Ervin added.

He said there is a short time to view society's needs in implementing intelligent vehicle-highway systems.

If public needs are not considered in establishing an intelligent vehicle-highway systems infrastructure, private groups will stress their own needs and hamper the ability to form a national system, he said.

James Neisch, Rockwell International manager of advanced engineering, said that in Europe and Japan, intelligent vehicle-highway systems are emerging as a "top down" system because of centralized planning from governmental and/or public and private sectors.

About 25,000 primarily navigational units have been sold to car owners in Japan at an average cost of $3,500, Neisch said.

European projects are using infrared above-ground traffic sensors, while the United States uses buried pavement loops, he said.

The latter use a wire under the road, with sensors picking up the presence of the wire and maintaining the vehicle direction based on the location of the wire.

Vehicle guidance projects, in which vehicle operators rely on rapidly updated traffic information to plot their routes, are under way in in Los Angeles and Orlando, Fla.

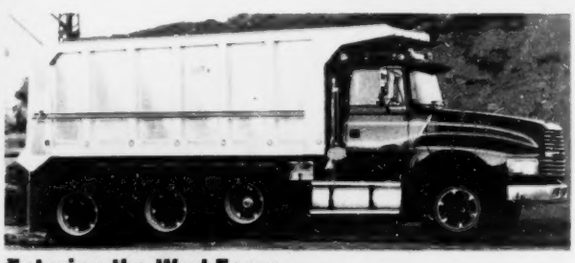
"We can take the best of what Japan and Europe have done and apply it to our own specific needs in North America," Neisch said.

F. Alan Smith, GM executive vice president for operations and public affairs, cited the importance of smooth and efficient commercial trucking.

GM's business with motor carriers, which helps the automaker maintain lean inventories and meet precise production schedules, has grown to account for about 57 percent of its transportation expenditures compared to 45 percent in 1979.

Its business with carriers amounts to $2 billion a year. About 7,000 trucks provide daily support for its vehicle assembly plants and another 7,000 support its manufacturing and stamping plants, Smith said.

"Each minute that each of those trucks is delayed because of traffic and other road conditions, and each gallon of fuel that is wasted in such delays, has a direct impact on the motor carrier's productivity and competitiveness as well as our own," Smith said.



Entering the WorkForce

The new Ford LTLS-9000 WorkForce adds aerodynamic styling and set-back front-axle maneuverability to a long list of features. It has a 121-inch bumper-to-back-of-cab length in either single or tandem rear axle configurations, both with 53-inch set-back front axles.

TRUCK BRIEFS

Oshkosh to buy Miller

OSHKOSH, Wis. — Oshkosh Truck Corp. said it has reached preliminary agreement to buy Miller Trailers Inc. and Miller Ventures Inc., Bradenton, Fla.-based manufacturers of truck trailers.

Terms and price are being negotiated.

The sale is expected to be concluded before the end of 1990 if the companies' outstanding debts can be restructured and legal requirements can be met.

Miller is privately owned. It produces a broad range of heavy-duty highway trailers and is expected to add about $50 million to Oshkosh Truck's sales.

Oshkosh had sales of $427 million in 1989; 70 percent of its volume was defense-related. Sales are currently 60 percent defense-related and are expected to fall to 50 percent next year as Oshkosh seeks greater diversification.

NTEA schedules parley

LIVONIA, Mich. — The National Truck Equipment Association has scheduled its 27th annual meeting for Feb. 7-9 at the San Diego Convention Center.

The exhibition will feature commercial truck chassis displays by domestic and import manufacturers and 270 product/literature booths of commercial truck bodies, equipment, accessories, components and industry services.

New Idealease outlets

BARRINGTON, Ill. — Idealease Inc., a large dealer-owned truck lease and rental organization, has opened two new outlets and expanded another.

J&B Leasing of Colchester, Vt., opened a new Idealease truck rental and leasing facility in Champlain, N.Y.

Harvey & Co. opened a new Idealease facility in Truro, Nova Scotia. Harvey & Co. already represents Idealease in several other Canadian locations.

Osborne Idealease/International relocated moved to a new facility in Greer, S.C. The dealership has a 20,000-square-foot building that includes 22 drive-through service bays.

Oshkosh truck contract

OSHKOSH, Wis. — Oshkosh Truck Corp. said it received a $57 million extension to a U.S. Army contract.

The award covers an additional 284 trucks that will be produced from March 1991 to June 1991.

European sales decline continues in September

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — New-car sales in Europe fell in September for the second consecutive month as demand plummeted in four of the five biggest markets, according to preliminary figures.

The September decline, the third in four months, will make it difficult for Europe to repeat 1989's record sales performance. The 4.8 percent drop to 904,900 units put nine-month sales 0.8 percent below Europe's record pace of 1989, when sales reached 13.4 million units.

Sales in 17 Western European countries totaled 10,386,600 through September, according to industry estimates compiled by *Automotive News*. That compares with 10,474,400 for the first nine months of 1989.

Only the German market, where new-car sales are buoyed by strong used-car demand in what was East Germany, is going against the trend. Used cars are scarce, so many would-be used-car buyers are purchasing new cars. German sales in September rose 8 percent, to 225,500 units, according to preliminary estimates.

For the sixth consecutive time, Volkswagen AG seems poised to finish the year as No. 1 in European sales. The VW group, which includes the Audi and Seat brands, is up 1.3 percent for the year, to 1,571,900 units, after climbing 5.7 percent in September, to 144,400. Its market share was 15.1 percent for nine months.

Sales at second-place Fiat S.p.A., hurt by declining penetration in its Italian domestic market this year, fell 12.7 percent, to 120,000 units in September. For nine months, the group, which includes Fiat, Alfa Romeo, Lancia and Ferrari marques, was off 3.8 percent, to 1,480,900 units, equal to a 14.3 percent European share.

Peugeot S.A., including the Peugeot and Citroen badges, accounted for 12.9 percent of the market through the first three quarters on sales of 1,335,700, virtually unchanged from last year. Peugeot S.A. sales rose 4.2 percent to 114,600 in September.

Sales for fourth-place Ford of Europe, including Jaguar, totaled 1,210,500 after nine months, a drop of 3.2 percent from 1989. Market share was 11.7 percent. Ford fell 6 percent, to 101,800 in September.

General Motors was next at 1,190,100, an 11.5 percent share and an increase of 2.9 percent — the best performance this year among Europe's six volume producers. But GM sales in September slipped 2 percent, to 109,300.

Renault rounds out the top six with nine-month sales of 1,019,900, off 3.3 percent from last year and a 9.8 percent share.

Combined Japanese penetration was 11.7 percent after the first nine months, compared with a 12-month share of 10.9 percent in 1989. Sales were 1,213,800 this year, a 5.9 percent increase. Nissan was tops among the Japanese with a share of 2.9 percent on sales of 305,500 cars, 5 percent lower than last year.

Mazda is the fastest-growing of all major makes in Europe this year, with a 24.9 percent sales surge to 217,800 units.

Among national markets, the United Kingdom, Italy, France and Spain declined in September. Britain fell 10.6 percent to 153,600 units, according to preliminary estimates, and was off 11.6 percent for nine months to 1,698,200.

France dropped 11.6 percent, to 139,100 in September; nine-month sales were up 3.4 percent at 1,733,500. Italian demand fell 7.8 percent, to 150,000 units in September. For nine months, Italian sales were 0.7 percent ahead of 1989, at 1,842,300.

Spain's sales plunged 23 percent in September, to 53,800, and were off 9.2 percent for nine months to 775,800 units.

The rising German market was 6.1 percent ahead of 1989 through September, with sales of 2,291,700 cars. Demand appears to be on track to break the 1987 record of 2.92 million.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	9 Months 1990	Pct. change vs. 1989

INAUGURAL EVENT

Industry Trade Days PREVIEW

Your exclusive preview of the auto industry's leading exhibition
January 10 & 11 1991
Cobo Center, Detroit, MI USA

A TWO DAY, PRE-SHOW OPPORTUNITY TO SEE THE LARGEST ONE-ROOM AUTO SHOW IN THE WORLD

For the first time ever in North America, suppliers to the worldwide automotive industry will be given the chance to preview more than 700 of the international automotive industry's newest products and concept vehicles of the future — — for two days before the general public is admitted. Here's a unique opportunity to entertain your key customers and prospects, host a reception or conduct a meeting around one of the world's most influential auto shows. You won't find a better setting in which to talk about your business. For more information or to obtain your credentials today, call Julie at:

Phone: (313) 643-0250
Fax: (313) 643-8788

THE NORTH AMERICAN INTERNATIONAL AUTO SHOW in DETROIT

Preview Hours:
Thursday, January 10 - Noon to 11:00 pm
Friday, January 11 - 9:00 am to 2:00 pm

Detroit Auto Dealers Association, 1800 W. Big Beaver, Troy, MI 48084

HOW DO YOU TRAIN A NEW SALES MANAGER?

On the job training of a new Manager can cost a Dealership a fortune. The biggest problem with a Manager learning by experience is that they never live long enough to graduate!

ENROLL YOUR MANAGER IN THE NATIONS BEST AUTOMOTIVE SALES MANAGERS TRAINING SCHOOL

This five day sales Manager's School is designed to take a new Manager through the entire cycle of Sales Management Responsibilities. The following is a partial list of the subject matter:

- SELECTION OF SALES PEOPLE
- TRAINING
- DESKING DEALS
- INVENTORY CONTROL
- MOTIVATING SALES PEOPLE
- CONTROLLING THE FLOOR
- PROPER T.O. PROCEDURE
- SUPERVISION
- FORECASTING
- WHY MANAGERS FAIL

CLASSES MONTHLY ENROLLMENT LIMITED

Output, sales, exports fall in Brazil

RIO DE JANEIRO — The Brazilian auto industry posted sharp declines in production, home-market sales and exports for the first nine months of 1990, the industry trade group ANFAVEA has reported.

Output by the 12 Brazilian and foreign manufacturers through September fell 16.06 percent from a year earlier, to 644,063 units, the group said. It attributed the decline to industry compliance with government-decreed production curbs, a 50-day strike at Ford and the impact of parts shortages.

Production for the full year is likely to be off 15 percent from last year, it said.

Nine-month sales in Brazil, continuing to feel the pinch of the government's anti-inflation program, were down 14 percent from the year-earlier period, to 492,329.

Exports through September plunged 26.2 percent to 141,399 units, reflecting an overvalued Brazilian currency, the trade group said. The industry shipped $172 million worth of vehicles abroad during the first nine months, down 25.5 percent from the same 1989 period.

Although the industry comprises 12 manufacturers, more than 97 percent of Brazil's vehicle output is accounted for by four producers: Volkswagen, General Motors, Fiat and Ford.

Ford hikes Australian prices 3.8% amid heavy incentives

By Pedr Davis
SPECIAL CORRESPONDENT

SYDNEY, Australia — Ford Motor Co. of Australia Ltd., following the lead of its U.S. parent, has raised retail prices an average of 3.8 percent despite heavy incentives by local manufacturers.

The action came on the heels of Ford's introduction of a special edition Falcon lineup to celebrate 30 years of domestic production.

Retail prices of the revamped line range from $19,300 (U.S.) for a GL sedan with manual transmission to $43,940 for the extended-wheelbase LTD.

Ford said the price increase reflects equipment upgrades for the 10 Falcon models and their derivatives, with special emphasis on improved anti-theft security.

Speaking at the introduction of the new models, Bill Hartigan, vice president of sales and marketing, predicted that 620,000 new vehicles will be sold in Australia this year, followed by a slight reduction in 1991.

Although artifically buoyed by heavy incentives, sales in that range would make 1990 Australia's best sales year since 1985. Hartigan said he expects all companies to continue to offer incentives at least until mid-1991, which will have an adverse effect on profits.

Ford, Australia's market leader for several years, has seen its lead eroded by its competitors' heavy incentives.

Official industry figures showed Ford with 21.8 percent of the new vehicle market in August, a full 2 points ahead of No. 2 Toyota, but still its lowest monthly share since 1984.

On a year-to-date basis, Ford had a 23 percent share through the end of August, Toyota 20.4 percent, and General Motors-Holden's Automotive, 17.6 percent.

Diablo delivery slated to begin in February

TURIN, Italy — Lamborghini S.p.A. confirmed that it will begin worldwide deliveries of its $200,000-plus Diablo in February.

Retail orders taken now will be for delivery in the spring of 1993, the company said.

Lamborghini has said it will produce only 500 Diablos a year. Powered by a 5.7-liter V-12 turning out 485 horsepower, the car is rated at 202 mph, making it the world's fastest production vehicle.

A four-wheel-drive version, the Diablo VT, is on schedule for delivery at the end of 1991, Lamborghini said.

Canada luxury sales hurt by indirect taxes

By Jeremy Sinek
SPECIAL CORRESPONDENT

TORONTO — Pressured by indirect taxes, luxury-car sales in Canada have fallen four years in a row.

While makers disagree on what can be called luxury cars, the numbers used by Jaguar Canada show a steady decline: From 29,221 in 1987, to 27,638 in 1988, to 25,212 in 1989 and to an estimated 22,000 in 1990.

Canada used to sell one luxury car for every 20 sold in the United States, but it has now fallen to one for every 25. Canada's overall market of about 1 million car sales is about 10 percent of the U.S. total.

While there is no direct luxury tax on cars as proposed in the United States, two tax laws directly affect large, expensive autos.

The first was the 1987 imposition of a $20,000 (U.S. $17,000) ceiling on the amount of the purchase price that can be claimed as depreciation against federal income tax. Previously, there was no limit.

That amounts to "a substantial indirect tax" on luxury cars, says Peter Menzel, immediate past president of the Federation of Automobile Dealer Associations of Canada. The ceiling was raised to $24,000 in 1989.

The other tax is unique to Ontario, the nation's largest province: a gas-guzzler tax introduced in July 1989.

Luxury-car sellers say the effect of that tax was disguised by an already softening market, but "this is a further misfortune," said John Arnone, manager of communications and public affairs for Jaguar Canada. "It's never been this difficult to do business in Ontario."

Arnone and others argue that the gas-guzzler tax is a thinly disguised discriminatory measure against European imports. They say it's no coincidence the 24.8-mpg threshold, based on highway mileage, is just low enough to exempt all domestics except Allante, Corvette with automatic transmission and General Motors products with the optional 5.7-liter V-8. The mpg figure is based on Imperial gallons.

The $600 first tier of the tax (19.5 to 24.7 mpg) snares the Audi V8, five Jaguars, half the BMW range, most Mercedes-Benz models, the Porsche 928 and several Saabs and Volvos.

The Jaguar V-12 and Mercedes V-8 sedans take a $1,200 hit in the next level (15.7 to 19.4 mpg). Rolls-Royces are penalized $2,200 (U.S. $1,900) for mileage below 15.6 mpg.

BMW Canada President Victor Doolan estimates that with Canada's combination of higher prices (inflated by import duties and taxes) and lower after-tax disposable incomes, it takes two years to "earn" a luxury car in Canada compared with one year in the United States.

But there is a dim light at the end of the tunnel.

If it becomes law, Canada's controversial new 7 percent Goods and Services Tax, which would replace a present "hidden" 13.5 percent manufacturer's tax, should reduce automobile prices by 3 to 5 percent beginning Jan. 1.

GMAC subsidiary to administer casualty insurance for dealers

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

Motors Insurance Corp. on Dec. 1 will replace Royal Insurance Group as primary underwriter for property and casualty insurance for General Motors franchisees.

As Motors Insurance, a subsidiary of General Motors Acceptance Corp., moves into the property and casualty insurance market, it also will add underground storage tank liability coverage that some dealers have found hard to get, said Sheldon Barquist, Motors Insurance vice president for marketing and development.

By Oct. 1, 1991, dealers who have underground fuel tanks are required to have coverage for liability that might arise if the tanks leak. The Environmental Protection Agency requires minimum coverage of $500,000 per occurrance and $1 million total.

Royal, based in Charlotte, N.C., since 1985 has been the primary carrier for the property and casualty insurance package, called "Protection Plus — The Preferred Insurance Plan For GM Dealers."

"We wanted to get into the commercial liability business, and we wanted to be certain underground storage tank coverage was available to our dealers," Barquist said. "Dealers have said they were having a difficult time acquiring that coverage."

Dealers will have to demonstrate that they are in compliance with EPA regulations for underground tanks before they can get insurance, he said.

Detroit-based Motors Insurance has been involved with GM-dealer insurance since 1978 as a principal reinsurer. PDP Group Inc. of Hunt Valley, Md., which has been involved in administering the plan, will continue that role when Motors Insurance takes over.

Motors Insurance intends to institute training programs for dealers to help them manage property and casualty insurance costs.

"If a dealer is going to control this area of operating expense, the dealer has to have a very scientific approach to loss avoidance. In other words, don't have any losses," Barquist said.

Barquist said Motors Insurance will show dealers how to keep insurance premiums down by improving in areas such as employee selection, driver training, dealership housekeeping, control of loaned vehicles, fire protection and safety training.

Insurance policies that expire before Dec. 1 will be renewed for one year by Royal. When the renewed policy expires in 1991, Motors will take over the coverage.

Exports help reduce June auto trade deficit

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks shrank 1.1 percent in June, helped by a 28.7 percent increase in exports.

Trade analysts continue to cite weakness in the U.S. economy and increased domestic production by foreign-owned automakers as the chief reasons for the improved trade picture.

The June trade deficit in vehicles was $3.54 billion compared to $3.58 billion in June 1989. The total value of imports was $4.6 billion. Exports were valued at $1.06 billion.

The value of all new-vehicle imports for June was 4.5 percent more than last year. The value of Canadian imports increased 25.8 percent. Other countries registering an increase in the value of shipments were: West Germany, 86.8 percent; Sweden 7.1 percent; Mexico, 55.7 percent; and countries grouped as "others" by the Commerce Department, 150.6 percent.

Imports from Yugoslavia totaled nearly $1.7 million in June, compared to zero in June 1989.

The value of Japanese shipments was off 15.8 percent for the month. Other countries experiencing a decrease in the value of U.S.-bound shipments were South Korea, 52.8 percent; United Kingdom, 1.8 percent; Italy, 34.4 percent; and France, 55.9 percent. Brazil sent no cars to the United States in June.

The value of new-vehicle exports to Canada jumped 20.1 percent in June, and shipments to Japan were up an impressive 95.7 percent for the month. Exports to Japan are up 28.8 percent over the past year.

Exports to countries grouped as "others" by the Commerce Department were up 45.6 percent in value in June.

MOUNT

FROM PAGE 6

llation Technologies mounts ilize electrical or hydraulic ac- ators, but the electronics soft- are and hardware are basically nilar. Aura says it has installed active-mount system in some avy ships and some military air- aft. Details on the Aura system ve not been released.

Lotus predicts that active engine ounts will be in an up-market uropean sedan within two years. oise Cancellation Technologies id it has successfully demon- rated an active engine-mount ototype developed under con- act with Chrysler and "a major uropean car manufacturer."

And General Motors is expected to announce a contract with Noise Cancellation Technologies.

"NCT's active mount impressed us all by far outreaching the level of vibration reduction that any of us expected," said Christofer A. Wolfe, a product engineer for Jeep/Truck Engineering at Chrysler, in a Noise Cancellation Technologies press release. "At the beginning of the project we had no idea the results would be so dramatic."

A spokesman for Lotus said the active mounts would likely be about twice as expensive as the most sophisticated hydraulic mounts. That would mean a single mount would cost about $75. All systems would require at least two of the mounts to be effective. The control electronics would also add approximately $10 to $20 additional cost. But the electronics could cost considerably more depending upon their sophistication.

Michael J. Parrella, president of Noise Cancellation Technologies, said the cost of his mounts would be similar.

High-revving four-cylinder engines of modest displacement can reliably make 200-plus horsepower with supercharging, turbocharging and multi-valve cylinder head technology. But four cylinder use has been limited — with some significant exceptions — to low-budget cars and trucks or sporty models where vibration and noise are more readily tolerated by buyers.

The traditional methods of damping powertrain vibrations are engine-powered balance shafts and heavy damping weights. Balance shafts, which weigh approximately 20 pounds, are currently used in the engines of General Motors, Ford Motor Co., Chrysler Corp., Mitsubishi Motors Corp., Porsche AG, Saab Scania AB and Volvo Car Corp.

Damping-weight systems, which modify the resonant frequencies of body, chassis and powertrain components, are even more widely used than balance shafts. These range in weight from 5 to 25 pounds.

The Lotus-Freudenberg system consists of conventional hydraulic engine mounts adapted to house an electrical actuator that is controlled by a computer. The actuator is controlled so that the force from the moving engine mass is not transmitted to the body or powertrain cradle.

The actuator's movement is determined by the system's computer using chassis-mounted accelerometers and an engine-speed sensor. The computer then shortens or lengthens the mounts in order to minimize the input from the vibrating engine.

Special Correspondent Ian Adcock in Norfolk, England contributed to this report.

VW

FROM PAGE 6

out twice what Renault would mmit — is understood to have it the German company in the iver's seat.

Volvo, which is linked to Renault rough a cross-shareholding pact, is in recent weeks entered the lks alongside its French partner.

Renault officials have said they ould consider producing a new all Renault model at the Mlada oleslava plant, while Volvo hairman Pehr. Gyllenhammar id at the recent Paris Auto Show at he would like Skoda to pro- ce the aging Volvo 240 series.

AZNP officials have insisted that y new partner will have to dou- e production, maintain the oda brand name, sell and service oda models through Western ne- orks and settle for minority ow- rship.

But, VW is not expected to accept a minority stake.

Meanwhile, Hahn is tentatively scheduled to sign an accord in China late next month to build a plant in the city of Changchun in a joint venture with a local carmaker. The factory could be producing up to 150,000 Golf/Jetta subcompacts annually by 1996.

VW's partner in the Changchun venture is First Automobile Works, which now assembles Audi 100 kits under a separate agreement. A feasibility study launched in 1988 on the second stage was concluded earlier this year and given a favorable recommendation. Approval by Chinese government officials is still pending.

VW is expected to invest about 1.5 billion marks ($980 million) in the venture. Semi-knockdown kit production would begin in 1991 and regular production would commence in 1993.

VW's existing deal with First Automobile Works, signed in 1988, covers licensing of the Audi 100 and delivery of tools, supplies and parts for local assembly. VW's separate Shanghai Volkswagen Auto Co. Ltd. venture in the city of Shanghai produces the Santana sedan, based on the previous-generation Passat.

If realized, the accords would continue VW's pattern of investing aggressively in foreign production, especially in former Soviet-bloc countries. The carmaker, the world's fourth biggest behind General Motors, Ford and Toyota, recently broke ground on a planned 5 billion mark ($3.3 billion) plant in the former East Germany.

The factory, in Mosel, is scheduled to reach an annual capacity of 250,000 Golf models by 1994.

SALES

FROM PAGE 6

both the Middle East and in Congress promise to keep consumers apprehensive," Webb said. "People simply don't have the money or confidence to buy in the present market."

Each of General Motors' car and truck divisions reported sales increases this year. Led by Buick's 59.6 percent gain, GM car sales were up 30.4 percent from a year ago. GM's truck sales rose 20.8 percent.

Ford Motor continued to have problems with Ford Division; every nameplate was down except Escort, which had a 23.14 percent increase. Probe sales were down 56.96 percent; Tempo sales dropped 49.06 percent.

Chrysler Corp.'s car sales rose 15.5 percent for the 10-day period. Eagle was the only make to report lower sales. Eagle Premier sales were off 67.51 percent. Truck sales were lower across the board; the combined dip was 16.7 percent.

The transplant automakers continued to roll along.

Sales of U.S.-built Mazda cars totaled 1,184 for a 167.9 percent increase over last year. Mazda also sold 154 Navajos. It was the first report on sales of the Explorer-based two-door sport-utility that Ford is building for Mazda.

Nissan reported improved performances by both its domestic cars and trucks for a combined sales jump of 27.9 percent.

The Civic lost steam, but the Accord was a boon as sales of Ohio-built Hondas rose 37.8 percent. Civic sales were off 204 units to 3,401, but Accord jumped 87.6 percent to 5,912 from 3,152.

Mitsubishi sold 1,092 U.S.-built cars, a 20.1 percent increase over last year.

e Buick-Oldsmobile-Cadillac roup, a post he held since Feb. 3, 86. He is a member of GM's Ad- inistration and Management mmittees.

Hoglund was born of American rents in Stockholm, Sweden, on ugust 22, 1934. He received a chelor's degree in economics om Princeton University in 1956 d a master's degree in business ministration from the University Michigan in 1958.

Hoglund began his GM career 1958 with the former Buick- dsmobile-Pontiac Division, serv- g in the accounting departments the division's central office, as ell as its Kansas City, Kan., ant.

He was transferred to the GM Comptroller's staff in 1964 and moved to the Pontiac divisional financial staff a year later. In 1969 he was named an assistant comptroller for Pontiac.

Hoglund was promoted to the GM Treasurer's office in New York as director of financial analysis in 1971 and a year later became an assistant treasurer. He returned to Pontiac as divisional comptroller in 1974 and was named comptroller of GM in 1978. In 1980 he was named a GM vice president and general manager of Pontiac.

Hoglund is generally credited with sparking the development of new products and reviving the performance-car marketing style that revitalized Pontiac in the mid-1980s.

Hoglund was appointed group executive in charge of the central office operating staff group in 1984 and in 1985 was named president of GM's Saturn Corporation subsidiary.

He is one of more than 30 faculty members of the 15th assembly of the Automotive News World Congress, co-sponsored by the University of Michigan Transportation Research Institute.

The Congress will be held in conjunction with the North American International Auto Show.

For further World Congress information, write Wendy Barhydt, Automotive News World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, Mich. 48108-2150, or telephone 313-936-1049.

QUALITY

FROM PAGE 3

want to know more about quality at General Motors,' " Quigley said. "This is a way to bring about integration to everyone, regardless of what division they work for."

The new effort is aimed at reinforcing sales referral programs at the plant or division level that encourage employees to get friends, relatives or neighbors to visit a GM dealership to shop for a vehicle. Such programs, which go by different names including "GM Proud," have been around for years.

Much of the information in the new folder and wallet card is in print and television advertising for the "Putting Quality On The Road" campaign, said GM spokesman Harold Jackson.

Employees and retirees can whip out a wallet card and recite J.D. Power and Associates survey results and other details such as:

- "In 1989, there was a higher percentage of 1979 GM cars still on the road than '79s from Ford, Chrysler, Toyota, Nissan or Honda."
- "A GM study shows that our automatic transmissions are more problem-free than those of any domestic competitor — and most imports."

The new communications effort seeks to capitalize on estimates that "one of every five people in the U.S. knows a GM employee or retiree," Quigley said.

It may not stop there.

Quigley said GM is thinking about enlisting the support of the estimated 365,000 employees in GM dealerships, and possibly suppliers and shareholders.

> "I think it's very good. It explains the quality and shares information with us that we might not have been aware of. I think the whole program is trying to explain where we stand with quality."
>
> **James Wenzel**
> GM employee

Automotive News asked a handful of GM employees about the fact book and card. Some said they had only glanced at the information or hadn't seen it at all, while others thought it would come in handy.

Patrick Kavanagh, manager of personnel administration at Cadillac, said he hasn't put the card or folder to use yet, but intends to.

"It's something I would share with some of my best friends — especially those who have foreign cars," he said.

James Wenzel, manager of sales and service training at GMC Truck & Bus Group, said of the card: "I have mine in my billfold because I want to refer to it once in a while. I think it's very good. It explains the quality and shares information with us that we might not have been aware of. I think the whole program is trying to explain where we stand with quality."

WORLD CONGRESS REGISTRATION

Ford dealers get Super incentive

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division is trying to regain the car sales lead from Chevrolet by offering trips to the Super Bowl to top performers in their districts.

Ford announced last week that it will offer a five-day/four-night trip to Super Bowl XXV in Tampa, Fla., Jan. 27, or an alternative $1,000 cash prize to dealers who achieve the highest percentages of their car sales quotas from Oct. 1 to Dec. 10. Extra points are available for meeting October quotas and Red Carpet lease quotas for Ford cars and trucks.

At the end of nine months, Ford trailed Chevrolet by 56,987 car sales; a year earlier, Ford led by 115,511.

Dealers received their car sales quotas Oct. 2 and were to notify Ford by Oct. 10 if they were not participating in the Super Bowl trip contest. Ford is charging participating dealers a $200 enrollment fee. That fee will be given back to the participating dealer if he meets 100 percent of his objective and does not win.

According to a dealer memorandum, dealers will compete against other dealerships in their districts. All 1989, 1990 and 1991 Ford cars leased or sold from Oct. 1 to Dec. 10 will be counted toward the dealers' quotas. Dealers can earn a bonus of five percentage points by achieving 100 percent of their October car sales quotas. Five additional percentage points will be given to dealers who meet their Red Carpet lease objectives.

Some big fleet orders may not help dealers meet their quotas; Ford said units beyond the first 10 sold or leased to one customer are ineligible. Sales to Ford employees, retirees or vendors (Plans A, X or Z) are eligible.

In other incentive news, Ford has switched from dealer to consumer cash on 1990 Escorts, Festivas and Rangers. The program began Oct. 18 and ends Dec. 11. Cut-rate loans are available instead of the cash rebate.

Rebates on 1990 models are $700 on Festiva, $1,000 on Escort and $1,500 on Ranger. The loan rate is 7.9 percent for 12 to 48 months.

Ford said it is switching to customer cash on those models because they are the most fuel efficient vehicles in Ford's lineup and buyers of those vehicles are "more dependent on customer cash than the average customer."

A Ford spokesman said Ford is not in trouble with corporate average fuel economy ratings, but the Middle East crisis has made consumers more sensitive to mpg.

Excluded from the program are sales to residents of California, Oregon, Alaska, Washington or Hawaii. Special rate Red Carpet Lease plans are not available for cash assistance.

From Oct. 18 to Dec. 11, Ford also increased dealership cash from $1,500 to $2,000 on 1990 Bronco models with RV converter packages. In addition, Ford increased customer cash from $500 to $750 on 1991 Crown Victorias (excluding the S model) and from $500 to $1,000 on 1991 Rangers equipped with automatic transmissions.

The Crown Victoria program runs from Oct. 18 to Jan. 31; the Ranger program runs from Oct. 18 to Dec. 11. Both the Crown Victoria and Ranger customer cash programs exclude sales to residents of California, Oregon, Alaska, Hawaii and Washington.

INCENTIVE WATCH
CUSTOMER INCENTIVES

	Rebates	Expiration Date
Chrysler Corp. (1989-90)		
Chrysler	$500-2,000	12/16

NHTSA upgrades probe of Taurus/Sable brakes

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The federal government has upgraded its defect investigation of the brakes on the Ford Taurus and Mercury Sable.

The National Highway Traffic Safety Administration said the brakes on 1.8 million Taurus/Sable models built since 1985 could be prone to corrosion. Engineers have been assigned to study the cars' braking systems.

NHTSA said the brakes are made with a two-piece rotor that can corrode, separating the disc from the hub. The brake pads clamp down on the disc, but the wheels keep rolling.

NHTSA said it has received complaints from owners of older Taurus and Sable models in geographic areas with severe winters. To check for the possible defect, the disc must be pulled off, NHTSA said.

NHTSA also opened several preliminary investigations last month:

- **1986 Ford Bronco, Bronco II,** 170,000 vehicles, dirt and moisture may be trapped between the fuel tank and a protective skid plate causing corrosion and fuel leaks.
- **1988-89 Eagle Medallion,** 33,130 cars, wiring harness may overload and melt, resulting in fire.
- **1989-90 Jeep Cherokee, Wagoneer, Comanche,** 330,000 vehicles, front left brake hose may break, causing loss in braking.
- **1989 Buick Reatta,** 6,300 cars, steering may severely pull to the right or left during hard braking.
- **1990 Honda Accord,** interior door handles may break off.

Ford ups brake warranties for Thunderbirds, Cougars

DEARBORN, Mich. — Ford Motor Co. has extended warranty coverage on front brake rotors and linings on 407,522 of its 1989-90 Thunderbirds and Cougars from 12 months/12,000 miles to 24 months/24,000 miles, or until May 31, 1991, whichever provides the greatest coverage.

In some cases, according to John P. King, parts and service engineering office manager for Ford Parts and Service Division, uneven front brake rotor wear could cause the vehicle to vibrate and the steering wheel to shake during braking.

Fewer than one-third of the vehicles are expected to experience any of those symptoms at 24,000 miles.

To correct the condition, dealers will install a revised front brake rotor and new disc brake linings; Thunderbird Super Coupe and Cougar XR7 models will receive only the new rotor.

OBITUARIES

Edwin Davis King Jr.

FREEPORT, Bahamas — Edwin Davis "Sunny" King Jr., owner/operator of King Motor Co. Inc. of Anniston, Ala., died Sept. 11. He was 64. King Motor Co. operates 11 dealerships in Auburn, Birmingham and Sylacauga, Ala.

King won the American Independent Automobile Dealers Association-Sports Illustrated Dealer of Distinction Award in 1986 and the Time Magazine Quality Dealer Award in 1988.

R. John Oshei

BUFFALO, N.Y. — R. John Oshei, chairman and chief executive officer of Trico Products Corp. from 1968 to 1989, died Sept. 29. He was 80. The company manufactures windshield wipers and other equipment for the auto industry.

CROWN VIC

FROM PAGE 3

Division general fleet manager.

Crown Victoria also got the nod at retail buyer clinics conducted by Ford earlier this year in Cincinnati and Tampa, Fla.

With its new Crown Victoria, Ford hopes to remain strong in the police and taxi markets. The division estimates that fleets will account for 37,800 units — about 27 percent of 1990-91 Crown Victoria sales. Approximately 90 percent of fleet sales are police and taxi packages.

According to a source at Chevrolet, the division expects to sell 60,000 Caprice fleet units in the 1990 calendar year including 35,000 police cars and 5,000 taxis. Fleet units make up about half of Caprice sales.

But the police car package for the restyled Crown Victoria will not go into production until early 1992 (nearly a year after regular production begins), according to information Ford gave police fleet buyers.

Production Job No. 1 for the 1992 Crown Victoria and Grand Marquis will be Jan. 14, 1991, at the St. Thomas, Ontario, plant. Chevrolet recently began producing 1991 police-package Caprices.

In the police package, Ford will use the 4.6-liter modular V-8 engine, produced at its Romeo, Mich., engine plant, and a transmission partially controlled by electronics, according to information supplied to police fleet buyers by Ford. The regular Crown Victorias will also have the 4.6-liter modular V-8, but no information was available last week on the transmission.

Ford officials will not comment on specifications of the 1992 or 1993 Crown Victoria. Engine Division officials have said in the past that the next car to receive the 4.6-liter modular V-8 would be the Crown Victoria and Grand Marquis.

POPULAR MECHANICS/JIM BURKE

1992 Mercury Grand Marquis has more formal roofline than Crown Victoria.

CHRYSLER

FROM PAGE 2

favors the system because it could create about 1,100 additional jobs.

Chrysler Motors President Robert Lutz hopes the two sides can come to an agreement on the four-day work week in St. Louis. "That is something that we will be discussing with the UAW among other issues," Lutz said last week.

He said it may not be limited to St. Louis II. "Our hope would be if we were able to come to an agreement on that, it would be a more generalized and conceptual agreement on alternative work schedules, rather than confined to any one plant."

Chrysler workers have been kept up to date on the progress of the talks via UAW newsletters. Last week's update included the issue of the three-crew system at St. Louis, said a union official at UAW Local 110, which represents the St. Louis workers.

"Workers are concerned that they won't have any say-so in the matter if the three-crew system is negotiated into the national pact," the union official said. He said workers' objections remain the same as they were last November: They want union-bargained overtime for working weekends and beyond eight hours daily. "Two-thirds of the plant would work every weekend," he said.

General Motors is interested in the three-crew system for some of its plants. In August, a study team composed of union and management officials from GM's Lordstown, Ohio, plant visited auto plants in Europe that use the system. A union official at Lordstown declined to comment until a report is completed.

Chrysler officials say the new contracts at Ford and GM, which include increased pensions and wages, are too inflationary for the No. 3 automaker, which has a higher percentage of pensioners and older workers than Ford and GM.

Automotive News Staff Reporter Mary Connelly contributed to this report.

Polish maker faces bankruptcy, but salvages Fiat deal

FRANKFURT, Germany — The Polish automaker Fabryka Samochodow Osobowych, or FSO, is reportedly faced with bankruptcy following the veto of a price increase by the government's anti-monopoly agency.

However, a Fiat Auto spokesman said the Italian automaker does not believe its pending co-production deal with FSO is endangered.

FSO, which produces the 1500 and Polonez sedans in Warsaw, has tentatively agreed to a $1 billion joint venture with Fiat that calls for production of 120,000 Fiat-designed cars a year by 1994.

Fiat earlier this year won out over Daihatsu for a contract to provide technology to put the Tipo subcompact into production, but the final agreement is still pending.

The Fiat official said he still expects the FSO agreement to be concluded by the end of the year.

Poland's anti-monopoly agency ruled that FSO abused its status as the country's only sedan manufacturer by raising prices when demand increased in July, and has ordered that prices be rolled back.

Idle plants cut week's car output

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

With five U.S. car assembly plants idle last week, scheduled auto production of 131,229 units dipped 8.38 percent below the prior week's build and fell 8.55 percent below the year-ago week.

So far this year, 5,062,267 cars have been assembled in the United States, 10.24 percent below the year-ago total.

Truckmakers' targeted build of 77,842 units was 7.35 percent below the previous week but was 9.56 percent above last year.

Year-to-date truck assembly is at 3,241,549, which is 142,259 units or 4.20 percent behind last year's pace at this time.

Ford Motor Co. will resume output today at its Kansas City, Mo.; Atlanta; and Lorain, Ohio, car facilities. The Lorain truck line extended downtime an additional week, until Nov. 5.

Ford's Kentucky truck facility in Louisville will be idle two weeks for inventory adjustment.

General Motors has extended downtime at its Willow Run, Mich., plant another week. It is scheduled to resume operations Nov. 5. The plant has been idle since Sept. 24.

GM's Arlington, Texas, plant will reopen today after two weeks of downtime for inventory adjustment.

The company's Reatta Craft Centre in Lansing, Mich., is slated to begin production of the 1991 Reatta Nov. 22. The plant closed for retooling July 23.

GM slated overtime last Friday and one shift Saturday at its Janesville, Wis., Cavalier facility, which has a four-day work week.

Chrysler's St. Louis No. 1 plant will be closed this week for inventory adjustment.

Subaru-Isuzu Automotive Inc.'s truck production last week fell below 100 units as the company changed to 1991 models.

Canada trucks move up 33%

Canadian automakers produced 20,712 cars last week, 2.68 percent below the prior week and 11.62 percent below last year.

So far this year, output of 841,765 autos is 7.61 percent above last year.

With all truck facilities operating last week, scheduled truck production in Canada rose 33.21 percent above the previous week, but it was 11.53 percent below the previous week.

Chrysler's Bramalea, Ontario, facility closed last week for inventory adjustment. It is expected to resume output Oct. 29.

TAXES

FROM PAGE 2

would have raised the minimum threshold for a gas-guzzler fine from 22.5 mpg to 23.5 mpg.

While the domestic industry would not immediately be affected by an increase in the gas-guzzler tax — the only two domestic 1991 gas guzzlers are the Cadillac Brougham and Allante — a significant number of family cars are within 0.5 mpg of the penalty, Greene said.

"If the Clean Air Act or new safety standards add weight, this could have the affect of dropping family cars into the gas-guzzler class," he said.

"If you double the tax, that adds $1,000 to family cars. That concerns us, especially in this economy."

The luxury tax could have a devastating effect on the price of high-line big imports. Rolls-Royce Motor Cars Inc. estimates that the proposals would increase the gas-guzzler tax on its Corniche III convertible by $7,770 and slap a $19,010 luxury tax on the $220,100 car. It gets 10 mpg in city driving and 13 mpg on the highway.

"In these economic times, that kind of price is going to put a question mark in some people's minds about buying. That could potentially be damaging to us," said Reg Abbiss, a Rolls-Royce spokesman.

"We think the tax is discriminatory against a relatively small group of companies," Abbiss said.

Side-impact standards weigh heavily on small cars

By Diana T. Kuryiko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Small, fuel-efficient cars will likely get bigger and heavier to comply with a new standard designed to reduce injuries in side impacts.

But automakers will buy time for their small cars by meeting the first phase of the standard in the 1994 model year with big cars that don't need side improvements.

Many large vehicles already have the kind of door strength and interior padding that meet the new regulation announced last week. The nation's entire car fleet won't be affected by the new rule until the 1997 model year.

Meeting the standard will present a challenge to some manufacturers because the extra weight of padding and reinforcement could cut down on passenger room in small cars. More significantly, the standard will further complicate efforts to reduce weight and meet federal fuel economy standards.

In addition, the doors on two-door models will be harder and more expensive to reinforce. The National Highway Traffic Safety Administration estimates the average cost on a two-door will be $90 per car vs. $25 for a four-door.

Yet in announcing the new rule, NHTSA called it "the most significant improvement in motor-vehicle safety" since the 1984 passive-restraint requirement.

"We will save 500 lives and reduce injuries by 26,000 each year," said Transportation Secretary Samuel K. Skinner at a press conference outside the U.S. Capitol.

A Ford Tempo with a massive side dent rested beside Skinner. Behind the driver's seat and in the front passenger seat were two of NHTSA's side-impact dummies, known as SID.

The dummy became the center of debate during the dozen years that NHTSA considered a new side-impact rule. General Motors argued that its BioSID was better, and the Europeans developed EuroSID. But NHTSA chose its own entry. It was one of the most controversial

CHARLES KRASNER

The Legend grows

Acura's all-new 1991 Legend sedan will reach U.S. dealer showrooms in November, sporting more length, width and power from a bigger, longitudinally mounted 3.2-liter V-6 engine that develops 200 horsepower. A Legend coupe will follow next March. Story on Page 52.

GM to idle 11 plants in November

6 are truck sites; 6 other locations face closing in sales pinch

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

Soft car sales and softer truck sales could cause General Motors to lose production of 125,000 units this quarter as it idles as many as 17 of its 33 North American assembly plants.

GM has notified workers at five U.S. truck plants, a Canadian truck plant and five U.S. car plants that they will be idle one to four weeks in November.

According to a supplier source and tentative GM schedules, four more U.S. plants and two Canadian plants may follow the already announced closings.

Scheduled shutdowns at the 11 plants will knock out production of 73,910 units. If all 17 plants shut down, GM will lose more than 10 percent of its scheduled fourth-quarter output of 1,153,000 units.

GM's truck and car sales have been up since Oct. 1, but the improvement can be discounted somewhat because 1989 sales dropped after a strong September.

In the first 20 days of October, GM truck sales were up 11.9 percent, and car sales were up 18.5 percent. In September, GM truck sales were off 21.9 percent, and car sales were down 11.6 percent.

The announced truck plant closings are:

- Flint, Mich., (Blazer-Jimmy-Sburban) will be idle four weeks beginning Oct. 29.
- Lordstown, Ohio, (Chevrolet-

Ford revises dealer billing procedures

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Beginning Dec. 1, Ford and Lincoln-Mercury dealers will have to pay for their vehicles 10 or 11 days sooner, but they will be reimbursed for the extra floorplan expenses incurred, and they will be reimbursed more often.

Dealers also will continue to receive 15 days of free floorplanning from the day the vehicle is delivered.

Dealers (or their finance sources) will have to pay for vehicles the day after they leave the factory. Currently, payment is due the day the dealer is scheduled to receive a vehicle. Typical transit time is 10 or 11 days, Ford says.

The new policy means Ford will get its money sooner, but the company says the change in billing is not related to a reduced cash supply the company has experienced as a result of lower sales and

SATURN SALES

On Day 1, a Calif. dealership trolls a stream of not-so-typical prospects

Automotive News *Staff Reporter Kristine Stiven Breese spent opening day at a Saturn store. Here's her report:*

SEPULVEDA, Calif. — Meet Virginia Zingo.

The 78-year-old beauty-shop employee moved from Detroit to California more than a decade ago. Last Thursday she was the first to place an order on the first official day of business at Saturn of the Valley.

Saturn won't be picky about its customers. But General Motors' new company had people like Andy and Tricia Gibson in mind when it designed its new sedans and coupe. Andy, a 28-year-old airplane mechanic, and Tricia, a 27-year-old schoolteacher, took delivery of the ceremonial first Saturn at 9:01 the night before, just after midnight Eastern time.

As prescribed by the Saturn game plan, the sale came from the imports. The Gibsons traded in a 1987 Nissan Sentra for their new $10,500 Saturn sedan.

Zingo was part of a stream of lookers and buyers — a World War II veteran, a wheelchair user, an actor, — who kept traffic steady at Saturn of the Valley. It was one of 29 Saturn stores that opened last Thursday to sell the cars slowly being produced at Saturn's plant in Spring Hill, Tenn.

Store employees were less concerned about the demographic profile of the group than about a shortage of cars, especially coupes and models with automatic transmissions.

The day:

8:15 a.m. — A handful of cu-

NEWSPAPER

Dealers win some, lose some in new GM sales pact

By Phil Frame
AUTOMOTIVE NEWS STAFF REPORTER

General Motors begins a new chapter in dealer relations Thursday when the 1990 sales and service agreement goes into effect.

Although the five-year contract has been hailed by the National Automobile Dealers Association as a major improvement over previous pacts, the NADA outlines many areas in which GM's 9,595 dealers have lost rights that they had in the 1985 franchise agreement:

- Dealers no longer must be notified when GM is studying putting a new dealership within their area.
- Dealers will need prior written permission from GM to add a dual point with another manufacturer.
- GM will gain an absolute right to buy a dealership if the owner has agreed to sell it to someone other than family or a top dealership manager.
- More reasons for termination are outlined, and GM has fewer mandates for communication with the dealer about to be terminated.

At least on the surface, the new contract is much different from the 1985 agreement it replaces. For the first time, each division has a separate sales and service agreement to go with a core contract that has provisions that apply to all GM dealers.

The divisional agreements also have different dispute resolution processes, replacing the current arbitration system that relies on a GM-paid retired judge.

NADA President Ray Green has said the pact is a major step toward improving relations between GM and its dealers.

"It's No. 1 in the industry," Green said. "There just isn't any other agreement today that provides for dealer input and dealer decision-making like this does."

But Green and NADA are more reserved in describing the pact to members in a bulletin outlining the changes.

"While the new 1990 agreement is not perfect from a dealer standpoint, NADA is optimistic

Minivans: More in store for Europe

Analysts tap today's tiny market segment as hot niche for '90s

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, Germany — Europe's microscopic minivan market appears destined to become the fastest-growing niche of the 1990s as several carmakers formulate plans to enter the segment.

Analysts regard small passenger vans in Europe as a market waiting for products — and a boom market at that. The London research group DRI Europe expects a phenomenal tenfold growth by the end of the decade, to about 750,000 units annually.

According to Carol Thomas, who has analyzed the segment for DRI, the surge will be supply-driven as manufacturers bring out new models one by one.

"The growth will be very largely product-led," said Thomas. "I don't know if people actually need these vehicles."

In its most recent European Light Trucks Forecast Report, DRI projects sales of 80,000 minivans in 1990, up from 68,765 in 1989. But it predicts that the segment will almost quadruple by 1995, to about 300,000 units, as new entries dribble out.

In contrast, the firm foresees only 9 percent growth for the total market in that same time frame.

But 1995 will be merely a point at which several new models now in the planning stages are expected to reach production, DRI says. The firm's analysts project that the market could double again by 1998 — to 600,000 to 650,000 units — and rise to about 750,000 by the end of the century.

But DRI also sees risks. According to the report, "The wide variation in market share of station wagons in European countries indicates that a full development of the market for vehicles with this type of niche is by no means assured."

The European minivan market is currently occupied only by the Renault Espace, Chrysler Voyager imports from the United States and various Japanese entries in low numbers. But most European automakers are pursuing minivan projects, and the Japanese are becoming more aggressive with new models, like the Toyota Previa.

Ford of Europe and Volkswagen AG are believed to be near a deci-

PROFITABLE PARTS

Some car dealers tap into new revenues by supplying body shops, competitors

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Some U.S. car dealers have spun off their parts departments into separate businesses that sell to their own dealerships and body shops, fleets and even competing dealerships.

The idea has gained particular attention in the Northeast, where General Motors' decision to close five parts distribution centers is prompting some GM dealers to open warehouses of their own.

And it comes as dealers find themselves squeezed between contradictory goals — the need to cut the expense of maintaining a huge parts inventory and the need for fast access to a large inventory so they can repair vehicles quickly.

Last summer, Long Island dealer Neil Feldstein opened Neil Parts, a subsidiary in Holbrook, N.Y., with its own 75,000-square-foot warehouse and delivery trucks.

Feldstein said the move made economic sense on its own merits, but he expects to pick up some extra business because GM is phasing out its 136,000-square-foot parts distribution center in Bethpage, Long Island.

Neil Parts carries a $5 million inventory of parts from GM, Ford Motor Co., Chrysler Corp. and Hyundai Motor America. Feldstein sells those makes at his six dealerships. He said Neil Parts is the only facility of its size in the region with parts from all of the domestic Big 3.

GM has "more than 500" dealers who are "fairly good-sized and aggressively pursuing" the wholesale parts business, said J. Timothy O'Connor, general sales manager for dealers for GM Service Parts Operations.

He said that in a declining new-car market, dealers are paying more attention to parts and service, especially with an eye toward customer satisfaction and keeping repeat customers.

As a result, some dealers have been "growing the (parts) business fairly aggressively over the last three or four years," O'Connor said.

"What you have are the aggres-

Car, truck sales climb 11.2% over depressed '89 period

By Kathy Jackson
AUTOMOTIVE NEWS STAFF REPORTER

Car and truck sales for the middle 10 days of October were a boon for U.S. automakers and their dealers compared to the depressed mid-October period last year.

Every automaker except Chrysler Corp. and Mitsubishi reported higher combined car and truck sales for the period as 280,633 units were delivered for an 11.2 percent increase.

The period had nine selling days each year.

In mid-October 1988, car and truck sales totaled 320,266. Thus, this year's performance was better than last year's, but it was 12.4 percent below the total of two years ago.

Car sales totaled 181,927 this year, a 15.3 percent increase over a year ago. Truck sales were 98,706, an increase of 4.3 percent.

Sales through Oct. 20 this year trailed 1989 — another sluggish year — by 5.01 percent. Through Oct. 20 last year, 11,936,464 cars and trucks had been sold; the total was 11,338,105 on Oct. 20 this year.

For the full year in 1988, the car-truck sales total was 15,464,000, a figure that is out of reach for 1990. Arvid Jouppi, senior vice president for research at Keane Securities Co. in Detroit, called 1988 "the last of the great watershed years" for the industry.

"Last year was a disaster," Jouppi said. He expects a better fourth quarter this year than last year but still expects vehicle sales this year to trail last year's 14,547,749.

October car sales have been bright for Chrysler Corp. Deliveries rose for the second straight 10-day period, this time by 5.6 percent. Chrysler's truck sales fell 18.7 percent in mid-October, bringing its combined car and truck sales down 6.7 percent.

Bernie Lasky, general sales manager at Hollywood Chrysler-Plymouth Inc. in Hollywood, Fla., said Chrysler's car sales are up because "people are really starting to take a good look at American cars." Chrysler truck sales are down, Lasky said, because dealers don't have much product. He said so many consumers have been ordering the restyled 1991 minivans that there aren't enough in stock.

Lasky said he believes Chrysler Corp. sales would improve even more if company Chairman Lee Iacocca would stop doing commercials for the products. "We just need good old John and Jane Doe," he said, "not some guy in a shirt and tie."

General Motors' car sales improved 15.1 percent, and its truck sales rose 7.5 percent for a combined hike of 12.4 percent. Buick, Chevrolet and Oldsmobile reported car sales gains; Cadillac and Pontiac were down. GM's truck sales (including minivans) were up across the board.

Ford Motor Co. sold 84,675 cars and trucks for the period for a combined increase of 9.9 percent. Car sales were up 8.9 percent, and

PARTS

FROM PAGE 3

sive, entrepreneurial dealers expanding their facilities to grow the business; some on the premises if they have the land available and the facilities available, and some in a separate facility close by," he said.

The National Automobile Dealers Association doesn't keep separate statistics on the larger dealer-based parts businesses, but NADA figures show that parts and service operations now contribute a higher percentage of dealership profits than either new or used cars.

Parts and service accounted for 14.6 percent of gross sales dollars at dealerships in 1989, only a fraction more than in 1988. But parts and service accounted for 64 percent of the average dealership's profits in 1989, compared with only 29 percent in 1988, NADA said.

The high cost of expanding a single-dealership parts department, especially the high cost of real estate in many areas, discourages dealers from simply expanding their own parts departments to serve their own needs, said Douglas E. Eriksen, Neil Parts vice president.

On Long Island, "you don't have the opportunity to spread out," said Eriksen. "Space is at a premium. If you were in Texas, you could buy a couple of acres, but you can't do that here."

Eriksen estimated that more than 75 percent of Neil Parts' business is with independent body shops; about 20 percent is with fleets, including Pan Am, plus Avis, National and Alamo rentals; and about 5 percent is with dealers, including Feldstein's own dealerships.

GM could be opening a niche for dealers by reducing the number of its parts distribution centers from 25 to 20 nationwide by the middle of next year.

The Long Island center has already stopped taking orders from dealers and is expected to be closed by the end of the year, along with parts distribution centers in Buffalo, N.Y., and Carnegie, Pa., a Pittsburgh suburb.

GM will also close parts centers in Baltimore and North Brunswick, N.J., by mid-1991.

GM will service all those areas from an existing parts center in Philadelphia and a new one that has opened in Martinsburg, W.Va., said GM spokesman Duane Poole.

Poole said the larger, better-stocked centers should deliver parts just as fast, or even faster than the old centers. But he acknowledged that some short-notice requirements could be better served by local warehouses.

Like Feldstein, dealers in some of the other areas affected by the GM closings expect to pick up some extra business as a result.

Paul Lilja, parts manager for Rohrich Cadillac Inc. (Sterling-Hyundai-Toyota-Suzuki) in Pittsburgh, says his parts department has tripled in size in the last two years, and he recently leased a four-story warehouse, partly because of the GM move.

"The business is there for the people who want to make the investment," Lilja says.

Rob Spiegel, general parts manager for Lustine GM Parts Distributors, the giant parts department of Lustine Chevrolet in Hyattsville, Md., near Washington, says he expects "some increase" in sales to GM dealers because of the Baltimore warehouse closing, but not a dramatic increase.

Lustine GM Parts Distributors already sells more GM parts than any other dealer parts department, Spiegel says, with sales of about $36 million last year.

Spiegel says the GM closings "will make a difference to dealers who, as the dealers say, 'live out of the warehouse,' who make one or two will-calls a day to pick up parts they've sold that morning. There are very few of those, but those dealers may have to increase their inventory."

But John Morrison, parts manager for Castriota Chevrolet Inc. in Pittsburgh, says there's no reason to start a new business as long as GM's service is adequate.

"Some of the big dealers around here have been buying up warehouses and stock in anticipation of GM's Carnegie center shutting down. We looked at it, too, but we think it might be a mistake," Morrison said.

"I was sorry to see Carnegie shut down because I lost a lot of friends there, but Martinsburg has been doing a bang-up job," he says.

Tom Webb, chief economist for the National Automobile Dealers Association, says the wholesale parts trade is "a business where you have to either get in it in a big way or get out of it."

That sentiment was echoed by Chuck Hutton, owner of Chuck Hutton Chevrolet in Memphis, Tenn., the No. 2 GM parts seller behind Lustine Chevrolet.

"To stay in the parts business, you can't be just sorta in it," Hutton says. Besides the start-up costs, a parts business has continuing expenses like accounts receivable, bad debts and obsolete inventory, he says.

Hutton's parts subsidiary had sales of about $26.5 million last year, he says.

Neil Parts Vice President Douglas Eriksen, right, directs stocking of parts at the company's warehouse in Holbrook, N.Y.

Volkswagen de Mexico expects sales, export gains

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — As Volkswagen de Mexico celebrates production of its two millionth VW, company President Martin Josephi is looking confidently ahead.

The company anticipates strong sales increases in both its home market and exports. Josephi said it has been a source of national pride that the parent company, Volkswagen AG in Germany, has designated Mexico as the center of production for the Americas.

Josephi made his remarks outside the official residence of President Carlos Salinas de Gortari. The Mexican president was the principal guest at a ceremony marking the production in Mexico of the one millionth Beetle and the two millionth VW vehicle, a 16-valve Golf GTI. The company was formed early in 1964 and production started two years later.

In the last several years, Volkswagen de Mexico has doubled the work force at its Puebla plant, where 20,439 are employed today, 16,673 of them blue collar workers. Production has risen from 48,717 vehicles in 1988 to 141,815 through the first nine months of this year.

In June alone, according to Josephi, 10,000 Beetles were produced, all for the Mexican market. Volkswagen has a leading 38 percent share of the small-car segment and a 28 percent share of the overall market.

Golf and Jetta models to the United States and Canada.

According to Josephi, the company's gross earnings from exports this year will be about $800 million, 40 percent of total gross sales.

Apart from exporting finished vehicles, VW de Mexico also exports 1,000 engines a day to Germany, said Josephi. He said the company plans to increase vehicle exports from 55,000 this year to 67,000 vehicles next year, more than 25 percent of the Mexican automotive industry's export total. Most will go north, but Josephi said about 3,000 will be shipped to new markets in South America.

Next year, he added, the company plans to sell 154,300 vehicles in Mexico, 80 percent more than in 1989.

Josephi told reporters that he hoped a score of European parts companies would start building plants in Mexico next year. Josephi, representatives of Daimler-Benz and Mexican Trade and Industrial Development Minister Jaime Serra Puche were members of a Mexican trade mission to Europe that recently attempted to attract parts suppliers to Mexico.

Josephi said that the mission met about 120 suppliers, and 20 of those showed great interest.

"We hope they will make a decision on whether to come this year," he said. They were in such fields as plastics, electronics and iron and

MINIVANS

FROM PAGE 3

on to build a plant in Spain or ortugal to jointly produce about 0,000 minivans a year, beginning 1993 or 1994. The Setubal indus- ial area near Lisbon is considered e most likely location.

VW and Ford have acknow- dged only that they are studying cooperative agreement. They aintain that no decision has been ade to produce a vehicle.

"Both sides are working on the oject, doing the research and arket studies," said a VW spokes- an. "These things have to be arified. There is no decision."

Known internally as the VX62, e Ford-VW project is believed to based primarily on VW Passat echanicals. It is believed that ch company would market half e output under its own brand me, with separate exterior de- gns being used over a common echanical base.

dam Opel

General Motors Europe, mean- hile, has canceled plans to base a all high-roof van on the Astra placement for the Opel Kadett at will debut at the Frankfurt ow next September. But insiders y the company is still considering ternatives.

The earlier idea was to source Opel-engineered van in Brazil d to market it in Europe and the nited States. "We're not going to one based on the T-car (Astra), t that doesn't mean we are not terested in the segment," said a M official.

Another GM Europe executive lled minivans "our No. 1 new oduct issue. We're going to be ere."

But GM Europe will not adopt orth America's front-wheel-drive astic-bodied minivan as its own. ngineers at GM's Adam Opel AG Ruesselsheim, Germany, are own to prefer the Toyota Previa ncept with its centrally mounted gine. The placement improves lance, lowers the center of grav- and permits a less prominent se, they say.

Mercedes, BMW

Both Mercedes-Benz AG and BMW AG have studied minivan concepts for possible production, and sources indicate that both now lean toward going ahead. BMW is known to have solicited design studies from outside consultants, while Mercedes has hired the design and engineering firm IDEA Institute of Turin, Italy, to build two prototypes.

According to reports, the Mercedes van would be based on the mid-sized W124 chassis for pre-series testing and could be displayed at the Geneva auto show next March as a concept vehicle.

If displayed at Geneva, the concept minivan — which would be designed internally, not by IDEA — would be used to test public reaction. Mercedes' front-wheel-drive minivan program, codenamed F100, was conceived largely with the U.S. market in mind. Word out of Stuttgart is that a production version, based on the W124 replacement, could arrive in about 1994.

Chrysler

Chrysler Corp. recently introduced its facelifted Voyager in Europe. Earlier this year, it announced plans to build the Voyager at its Eurostar GmbH joint venture with Steyr-Daimler-Puch in Graz, Austria. The Eurostar plant is scheduled to be completed in December, and production is slated to begin late next year at an initial annual rate of 25,000.

"Europe's baby boom was a little later getting started than the one in America," Joseph Cappy, Chrysler Corp.'s vice president for international operations, said at the recent Paris auto show. "The oldest American baby boomers are approaching middle age, but those in Europe are just hitting their early 30s. And that's the peak age for Voyager buyers."

Fiat and Peugeot

Fiat Auto S.p.A. is rumored to be interested in a deal to market Chrysler minivans in Italy. But Fiat also is working with France's Peugeot on a minivan project, the W10, under the aegis of the two companies' Sevel commercial van joint venture. The Sevel small van is conceived on an all-new platform — using neither the Fiat Tipo nor Peugeot 405 as a base. Introduction is expected in about 1993.

Meanwhile, Renault, Europe's longtime minivan leader, will unveil an updated Espace van at the Geneva auto show next March. The P36 van will have a softer look with a much rounder nose.

Lamborghini

One other tantalizing prospect: Lamborghini is considering developing a V-12 minivan by 1995 to round out its range.

The minivan is being weighed against a four-seater or another mid-engined supercar as the third model in the lineup.

Land Rover mulls bid for Brazil maker

RIO DE JANEIRO — Land Rover Ltd., which produces Range Rover off-road vehicles, is considering a takeover bid for Brazil's Engesa S.A., a leading producer of military and commercial utility vehicles.

According to sources at the British Embassy, several Land Rover executives are in Brazil to decide whether to bid on all or part of Engesa, or on building a greenfield assembly plant. A decision is expected soon.

Land Rover's parent, British Aerospace PLC, favors the acquisition of Engesa because of the possibility for marrying Engesa's enormously varied arms manufacturing potential with BAe's world wide marketing clout.

The sources said, however, that BAe considers the asking price — $70 million, plus assumption of $300 million in debt — to be excessive.

Rover is not the only manufacturer eyeing Brazil. Chrysler Corp.'s Jeep-Eagle unit also is known to be studying the feasibility of assembling vehicles in Brazil. Toyota Corp., which manufactures four-wheel-drive vehicles here, recently purchased land to build a second factory.

— Rik Turner

Banks weigh restructuring of Bivouac

By Joseph Bohn
TRUCK EDITOR

Bivouac Industries Inc.'s two major banks are discussing a restructuring plan that would allow the van converter to go forward in a scaled-down size.

Scott Chapman, president of the Vandalia, Mich., firm, formed a private group that plans to re-purchase controlling interest from a New York investment group.

Chapman founded Bivouac in 1971, but sold it to private investors in 1987. The company was forced to shut down for several days beginning Oct. 5 after it ran out of money. It resumed operating with a skeleton crew that was finishing work on uncompleted vehicles. There were orders for all the unfinished vehicles, Chapman said.

"What was strictly a crew doing building out is now a crew that's going to be doing fresh business," Chapman said.

The banks are Ameritrust National Bank of Elkhart, Ind., and Den norske Bank of New York.

An Ameritrust spokesman said his bank is talking to Bivaouc about a restructuring, but cannot comment about its outcome at this point.

Chapman said he received encouragement from dealers following an Oct. 15 *Automotive News* story about his financial plight.

"We feel good enough to do 91 orders" this week, Chapman said.

He plans to operate Bivouac with a crew of about 40 people, sufficient for about 1,700 van conversions yearly.

In the 1990 model year, Bivouac converted 5,700 vans and produced another 850 high cube trucks. Bivouac was Ford Motor's No. 1 converter in calendar 1989. At its peak in 1985, Bivouac converted about 7,500 vans, Chapman said.

Scaled down, Bivouac will be strictly a van converter. It has dropped its Bivouac Commercial Vehicles operation.

Chapman plans to continue converting vans on all the major domestic van manufacturers' chassis, and he said he has a "commitment from the motor companies to supply what Bivouac needs."

Jerome Mittman, Ford Division recreational vehicle sales manager, said, "If everything works out with Bivouac, we will support them with chassis. We have to see the details of what they work out, but our intent is to support them as much as we can."

Thomas Pfingst, Chevrolet Division assistant director of fleet sales, truck and special vehicles, said, "There's no question we will support him, if he gets his company restructured.

"He's been in the business a long time, and he runs an honorable company. We will do everything possible within our guidelines to support him."

Car build climbs 13% to 147,288

By Karen Detkowski
AUTOMOTIVE NEWS STATISTICIAN

U.S. auto production rose last week as workers returned at five plants.

Scheduled production of 147,288 cars last week was 13.23 percent above the prior week and 0.78 percent above the year-ago week.

So far this year, 5,208,406 cars have been assembled, 10.02 percent behind last year at this time.

Truck output was scheduled at 80,045 units last week, 2.58 percent above the previous week and 6.23 percent above the 1989 week.

Year-to-date truck output is 3.92 percent below last year at this point, the closest 1990 production has been to last year's total.

All Ford Motor Co. assembly facilities except Norfolk, Va., are scheduled to operate this week. Norfolk, which produces the F-series pickup, will be idle one week because of a shortage of dealer orders.

Ford scheduled Saturday overtime last week at its Escort assembly plant in Wayne, Mich.

General Motors will resume output at the Willow Run, Mich., plant today after five weeks of downtime.

GM scheduled Saturday overtime last week at Lansing, Mich., A- and B-lines; Lake Orion, Mich.; and Janesville, Wis.

The Janesville plant also worked two shifts of overtime Friday.

Chrysler Corp. reported overtime at its Newark, Del., assembly plant last Saturday. The company's St. Louis No. 1 plant resumed output after one week of downtime for inventory adjustment. The plant will operate on single eight-hour daily shifts.

Canada's gain is nearly 20%

Canadian auto producers scheduled 26,622 units last week, 19.73 percent above the prior week's build and 12.37 percent above the year-ago week.

Year-to-date, 869,910 cars have been produced, 7.70 percent above the 807,749 produced at this point in 1989.

Truckmakers assembled 18,797 units last week, 2.76 percent above the previous week and 23.86 percent below the year-ago week.

Year-to-date truck production stands at 693,177 units, 12.11 percent below last year at this time.

CLOSINGS

FROM PAGE 1

GMC full-sized vans) will be idle four weeks beginning Nov. 5.

- Fort Wayne, Ind., (Chevrolet-GMC full-sized pickups) will be idle two weeks beginning Nov. 5.
- Pontiac (East), Mich., (Chevrolet-GMC full-sized pickups) will be idle two weeks beginning Nov. 5.
- Tarrytown, N.Y., (Chevrolet-Oldsmobile-Pontiac minivans) will go down Nov. 5 for two weeks.
- Scarborough, Ontario, (Chevrolet-GMC full-sized cargo and passenger vans, will be idle three weeks beginning Nov. 5.

Five car plants will close Nov. 5. Bowling Green, Ky. (Corvette), will resume after one week. Down two weeks will be Wilmington, Del., (Corsica-Beretta), Van Nuys, Calif., (Firebird-Camaro); Fairfax, Kan., (Grand Prix); and Oklahoma City, (Century-Ciera-Pontiac 6000).

Tentative schedules at GM indicate further closings are expected by Nov. 5 at Linden, N.J., (Corsica-Beretta) and Wentzville, Mo., (Bonneville-Park Avenue-Oldsmobile 88).

The supplier source said the truck plant in Moraine, Ohio, (S pickup-Blazer-Jimmy-Oldsmobile Bravada) is expected to be idled in November and the truck plant in Baltimore (Astro-Safari) is expected to be idled in December.

The source said the truck plant in Oshawa, Ontario, (GMC-Chevrolet full-sized pickups) may be idled as soon as this week, and the car plant in Ste. Therese, Quebec, (Oldsmobile Ciera) for two weeks beginning Dec. 10.
